ALL but one of the papers composing this volume appear for the first time. The little essays, or rather fantasies, forming the second part of the book, deal with experiences in two hemispheres; but their general title should explain why they have been arranged independently of that fact. To any really scientific imagination, the curious analogy existing between certain teachings of evolutionary psychology and certain teachings of Eastern faith,— particularly the Buddhist doctrine that all sense-life is Karma, and all substance only the phenomenal result of acts and thoughts,— might have suggested something much more significant than my cluster of *Retrospectives*. These are offered merely as intimations of a truth incomparably less difficult to recognize than to define.

Exotics

— "Even the worst tea is sweet when first made from the new leaf." — *Japanese proverb.*

Exotics and Retrospectives

Fuji-no-Yama

Kité miréba,
Sahodo madé nashi,
Fuji no Yama !

Seen on close approach, the mountain of Fuji does not come up to expectation. — *Japanese proverbial philosophy.*

THE most beautiful sight in Japan, and certainly one of the most beautiful in the world, is the distant apparition of Fuji on cloudless days, — more especially days of spring and autumn, when the greater part of the peak is covered with late or with early snows. You can seldom distinguish the snowless base, which remains the same color as the sky : you perceive only the white cone seeming to hang in heaven ; and the Japanese comparison of its shape to an inverted half-open fan is made wonderfully exact by the fine streaks that spread downward from the notched top, like shadows of fan-ribs. Even

4 Exotics and Retrospectives

lighter than a fan the vision appears, — rather the ghost or dream of a fan; — yet the material reality a hundred miles away is grandiose among the mountains of the globe. Rising to a height of nearly 12,500 feet, Fuji is visible from thirteen provinces of the Empire. Nevertheless it is one of the easiest of lofty mountains to climb; and for a thousand years it has been scaled every summer by multitudes of pilgrims. For it is not only a sacred mountain, but the most sacred mountain of Japan, — the holiest eminence of the land that is called Divine, — the Supreme Altar of the Sun; — and to ascend it at least once in a life-time is the duty of all who reverence the ancient gods. So from every district of the Empire pilgrims annually wend their way to Fuji; and in nearly all the provinces there are pilgrim-societies — *Fuji-Kō*, — organized for the purpose of aiding those desiring to visit the sacred peak. If this act of faith cannot be performed by everybody in person, it can at least be performed by proxy. Any hamlet, however remote, can occasionally send one representative to pray before the shrine of the divinity of Fuji, and to salute the rising sun from that sublime eminence. Thus a single company of Fuji-

pilgrims may be composed of men from a hundred different settlements.

By both of the national religions Fuji is held in reverence. The Shintō deity of Fuji is the beautiful goddess Ko-no-hana-saku-ya-himé, — she who brought forth her children in fire without pain, and whose name signifies “Radiant-bloom-ing-as-the-flowers-of-the-trees,” or, according to some commentators, “Causing-the-flowers-to-blossom-brightly.” On the summit is her temple; and in ancient books it is recorded that mortal eyes have beheld her hovering, like a luminous cloud, above the verge of the crater. Her viewless servants watch and wait by the precipices to hurl down whomsoever presumes to approach her shrine with unpurified heart. . . . Buddhism loves the grand peak because its form is like the white bud of the Sacred Flower, — and because the eight cusps of its top, like the eight petals of the Lotos, symbolize the Eight Intelligences of Perception, Purpose, Speech, Conduct, Living, Effort, Mindfulness, and Contemplation.

But the legends and traditions about Fuji, the stories of its rising out of the earth in a single night, — of the shower of pierced-jewels once

6 Exotics and Retrospectives

flung down from it, — of the first temple built upon its summit eleven hundred years ago, — of the Luminous Maiden that lured to the crater an Emperor who was never seen afterward, but is still worshipped at a little shrine erected on the place of his vanishing, — of the sand that daily rolled down by pilgrim feet nightly reascends to its former position, — have not all these things been written in books? There is really very little left for me to tell about Fuji except my own experience of climbing it.

I made the ascent by way of Gotemba, — the least picturesque, but perhaps also the least difficult of the six or seven routes open to choice. Gotemba is a little village chiefly consisting of pilgrim-inns. You reach it from Tōkyō in about three hours by the Tōkaidō railway, which rises for miles as it approaches the neighborhood of the mighty volcano. Gotemba is considerably more than two thousand feet above the sea, and therefore comparatively cool in the hottest season. The open country about it slopes to Fuji; but the slope is so gradual that the table-land seems almost level to the eye. From Gotemba in perfectly clear weather the mountain looks uncomfortably near, — formidable by proximity, —

though actually miles away. During the rainy season it may appear and disappear alternately many times in one day,—like an enormous spectre. But on the grey August morning when I entered Gotemba as a pilgrim, the landscape was muffled in vapors; and Fuji was totally invisible. I arrived too late to attempt the ascent on the same day; but I made my preparations at once for the day following, and engaged a couple of *gōriki* (“strong-pull men”), or experienced guides. I felt quite secure on seeing their broad honest faces and sturdy bearing. They supplied me with a pilgrim-staff, heavy blue *tabi* (that is to say, cleft-stockings, to be used with sandals), a straw hat shaped like Fuji, and the rest of a pilgrim’s outfit;—telling me to be ready to start with them at four o’clock in the morning.

What is hereafter set down consists of notes taken on the journey, but afterwards amended and expanded,—for notes made while climbing are necessarily hurried and imperfect.

8 Exotics and Retrospectives

I

August 24th, 1897.

From strings stretched above the balcony upon which my inn-room opens, hundreds of towels are hung like flags, — blue towels and white, having printed upon them in Chinese characters the names of pilgrim-companies and of the divinity of Fuji. These are gifts to the house, and serve as advertisements. . . . Raining from a uniformly grey sky. Fuji always invisible.

August 25th.

3 : 30 *a. m.* — No sleep ; — tumult all night of parties returning late from the mountain, or arriving for the pilgrimage ; — constant clapping of hands to summon servants ; — banqueting and singing in the adjoining chambers, with alarming bursts of laughter every few minutes. . . . Breakfast of soup, fish, and rice. Gōriki arrive in professional costume, and find me ready. Nevertheless they insist that I shall undress again and put on heavy underclothing ; — warning me that even when it is Doyō (the period of greatest summer heat) at the foot of the mountain, it is

Daikan (the period of greatest winter cold) at the top. Then they start in advance, carrying provisions and bundles of heavy clothing. . . . A kuruma waits for me, with three runners, — two to pull, and one to push, as the work will be hard uphill. By kuruma I can go to the height of five thousand feet.

Morning black and slightly chill, with fine rain ; but I shall soon be above the rain-clouds. . . . The lights of the town vanish behind us ; — the kuruma is rolling along a country-road. Outside of the swinging penumbra made by the paper-lantern of the foremost runner, nothing is clearly visible ; but I can vaguely distinguish silhouettes of trees and, from time to time, of houses, — peasants' houses with steep roofs.

Grey wan light slowly suffuses the moist air ; — day is dawning through drizzle. . . . Gradually the landscape defines with its colors. The way lies through thin woods. Occasionally we pass houses with high thatched roofs that look like farmhouses ; but cultivated land is nowhere visible. . . .

Open country with scattered clumps of trees, — larch and pine. Nothing in the horizon but

10 Exotics and Retrospectives

scraggy tree-tops above what seems to be the rim of a vast down. No sign whatever of Fuji. . . . For the first time I notice that the road is black, — black sand and cinders apparently, volcanic cinders: the wheels of the kuruma and the feet of the runners sink into it with a crunching sound.

The rain has stopped, and the sky becomes a clearer grey. . . . The trees decrease in size and number as we advance.

What I have been taking for the horizon, in front of us, suddenly breaks open, and begins to roll smokily away to left and right. In the great rift part of a dark-blue mass appears, — a portion of Fuji. Almost at the same moment the sun pierces the clouds behind us; but the road now enters a copse covering the base of a low ridge, and the view is cut off. . . . Halt at a little house among the trees, — a pilgrims' resting-place, — and there find the gōriki, who have advanced much more rapidly than my runners, waiting for us. Buy eggs, which a gōriki rolls up in a narrow strip of straw matting; — tying the matting tightly with straw cord between the eggs, — so that the string of eggs has somewhat

the appearance of a string of sausages. . . .
Hire a horse.

Sky clears as we proceed;—white sunlight floods everything. Road reascends; and we emerge again on the moorland. And, right in front, Fuji appears, — naked to the summit, — stupendous, — startling as if newly risen from the earth. Nothing could be more beautiful. A vast blue cone, — warm-blue, almost violet through the vapors not yet lifted by the sun, — with two white streaklets near the top which are great gullies full of snow, though they look from here scarcely an inch long. But the charm of the apparition is much less the charm of color than of symmetry, — a symmetry of beautiful bending lines with a curve like the curve of a cable stretched over a space too wide to allow of pulling taut. (This comparison did not at once suggest itself: The first impression given me by the grace of those lines was an impression of femininity;—I found myself thinking of some exquisite sloping of shoulders towards the neck.) I can imagine nothing more difficult to draw at sight. But the Japanese artist, through his marvellous skill with the writing-brush, — the skill

12 Exotics and Retrospectives

inherited from generations of calligraphists, — easily faces the riddle : he outlines the silhouette with two flowing strokes made in the fraction of a second, and manages to hit the exact truth of the curves, — much as a professional archer might hit a mark, without consciously taking aim, through long exact habit of hand and eye.

II

I see the *gōriki* hurrying forward far away, — one of them carrying the eggs round his neck ! . . . Now there are no more trees worthy of the name, — only scattered stunted growths resembling shrubs. The black road curves across a vast grassy down ; and here and there I see large black patches in the green surface, — bare spaces of ashes and scoræ ; showing that this thin green skin covers some enormous volcanic deposit of recent date. . . . As a matter of history, all this district was buried two yards deep in 1707 by an eruption from the side of Fuji. Even in far-off *Tōkyō* the rain of ashes covered roofs to a depth of sixteen centimetres. There are no farms in this region, because there is little true soil ; and there

is no water. But volcanic destruction is not eternal destruction ; eruptions at last prove fertilizing ; and the divine “ Princess-who-causes-the-flowers-to-blossom-brightly ” will make this waste to smile again in future hundreds of years.

. . . The black openings in the green surface become more numerous and larger. A few dwarf-shrubs still mingle with the coarse grass. . . . The vapors are lifting ; and Fuji is changing color. It is no longer a glowing blue, but a dead sombre blue. Irregularities previously hidden by rising ground appear in the lower part of the grand curves. One of these to the left, — shaped like a camel’s hump, — represents the focus of the last great eruption.

The land is not now green with black patches, but black with green patches ; and the green patches dwindle visibly in the direction of the peak. The shrubby growths have disappeared. The wheels of the kuruma, and the feet of the runners sink deeper into the volcanic sand. . . . The horse is now attached to the kuruma with ropes, and I am able to advance more rapidly. Still the mountain seems far away ; but we are really running up its flank at a height of more than five thousand feet.

14 Exotics and Retrospectives

Fuji has ceased to be blue of any shade. It is black, — charcoal-black, — a frightful extinct heap of visible ashes and cinders and slaggy lava. . . . Most of the green has disappeared. Likewise all of the illusion. The tremendous naked black reality, — always becoming more sharply, more grimly, more atrociously defined, — is a stupefaction, a nightmare. . . . Above — miles above — the snow patches glare and gleam against that blackness, — hideously. I think of a gleam of white teeth I once saw in a skull, — a woman's skull, — otherwise burnt to a sooty crisp.

So one of the fairest, if not the fairest of earthly visions, resolves itself into a spectacle of horror and death. . . . But have not all human ideals of beauty, like the beauty of Fuji seen from afar, been created by forces of death and pain? — are not all, in their kind, but composites of death, beheld in retrospective through the magical haze of inherited memory?

III

The green has utterly vanished ; — all is black. There is no road, — only the broad waste of black sand sloping and narrowing up to those dazzling, grinning patches of snow. But there is a track, — a yellowish track made by thousands and thousands of cast-off sandals of straw (*waraji*), flung aside by pilgrims. Straw sandals quickly wear out upon this black grit ; and every pilgrim carries several pair for the journey. Had I to make the ascent alone, I could find the path by following that wake of broken sandals, — a yellow streak zigzagging up out of sight across the blackness.

6 : 40 *a. m.* — We reach Tarōbō, first of the ten stations on the ascent : height, 6000 feet. The station is a large wooden house, of which two rooms have been fitted up as a shop for the sale of staves, hats, raincoats, sandals, — everything pilgrims need. I find there a peripatetic photographer offering for sale photographs of the mountain which are really very good as well as very cheap. . . . Here the *gōriki* take

16 Exotics and Retrospectives

their first meal; and I rest. The kuruma can go no further; and I dismiss my three runners, but keep the horse,—a docile and surefooted creature; for I can venture to ride him up to *Ni-gō-goséki*, or Station No. 2½.

Start for No. 2½ up the slant of black sand, keeping the horse at a walk. No. 2½ is shut up for the season. . . . Slope now becomes steep as a stairway, and further riding would be dangerous. Alight and make ready for the climb. Cold wind blowing so strongly that I have to tie on my hat tightly. One of the *gōriki* unwinds from about his waist a long stout cotton girdle, and giving me one end to hold, passes the other over his shoulder for the pull. Then he proceeds over the sand at an angle, with a steady short step, and I follow; the other guide keeping closely behind me to provide against any slip.

There is nothing very difficult about this climbing, except the weariness of walking through sand and cinders: it is like walking over dunes. . . . We mount by zigzags. The sand moves with the wind; and I have a slightly nervous sense—the feeling only, not the perception; for I keep my eyes on the sand,—of height growing

above depth. . . . Have to watch my steps carefully, and to use my staff constantly, as the slant is now very steep. . . . We are in a white fog, — passing through clouds! Even if I wished to look back, I could see nothing through this vapor; but I have not the least wish to look back. The wind has suddenly ceased — cut off, perhaps, by a ridge; and there is a silence that I remember from West Indian days: the Peace of High Places. It is broken only by the crunching of the ashes beneath our feet. I can distinctly hear my heart beat. . . . The guide tells me that I stoop too much, — orders me to walk upright, and always in stepping to put down the heel first. I do this, and find it relieving. But climbing through this tiresome mixture of ashes and sand begins to be trying. I am perspiring and panting. The guide bids me keep my honorable mouth closed, and breathe only through my honorable nose.

We are out of the fog again. . . . All at once I perceive above us, at a little distance, something like a square hole in the face of the mountain, — a door! It is the door of the third station, — a wooden hut half-buried in black

18 Exotics and Retrospectives

drift. . . . How delightful to squat again, — even in a blue cloud of wood-smoke and under smoke-blackened rafters! Time, 8:30 a. m. Height, 7,085 feet.

In spite of the wood-smoke the station is comfortable enough inside; there are clean mattings and even kneeling-cushions. No windows, of course, nor any other opening than the door; for the building is half-buried in the flank of the mountain. We lunch. . . . The station-keeper tells us that recently a student walked from Gotemba to the top of the mountain and back again — in geta! Geta are heavy wooden sandals, or clogs, held to the foot only by a thong passing between the great and the second toe. The feet of that student must have been made of steel!

Having rested, I go out to look around. Far below white clouds are rolling over the landscape in huge fluffy wreaths. Above the hut, and actually trickling down over it, the sable cone soars to the sky. But the amazing sight is the line of the monstrous slope to the left, — a line that now shows no curve whatever, but shoots down below the clouds, and up to the gods only

know where (for I cannot see the end of it), straight as a tightened bowstring. The right flank is rocky and broken. But as for the left,—I never dreamed it possible that a line so absolutely straight and smooth, and extending for so enormous a distance at such an amazing angle, could exist even in a volcano. That stupendous pitch gives me a sense of dizziness, and a totally unfamiliar feeling of wonder. Such regularity appears unnatural, frightful; seems even artificial,—but artificial upon a superhuman and demoniac scale. I imagine that to fall thence from above would be to fall for leagues. Absolutely nothing to take hold of. But the *gōriki* assure me that there is no danger on that slope: it is all soft sand.

IV

Though drenched with perspiration by the exertion of the first climb, I am already dry, and cold. . . . Up again. . . . The ascent is at first through ashes and sand as before; but presently large stones begin to mingle with the sand; and the way is always growing steeper. . . . I constantly slip.

20 Exotics and Retrospectives

There is nothing firm, nothing resisting to stand upon: loose stones and cinders roll down at every step. . . . If a big lava-block were to detach itself from above! . . . In spite of my helpers and of the staff, I continually slip, and am all in perspiration again. Almost every stone that I tread upon turns under me. How is it that no stone ever turns under the feet of the *gōriki*? *They* never slip, — never make a false step, — never seem less at ease than they would be in walking over a matted floor. Their small brown broad feet always poise upon the shingle at exactly the right angle. They are heavier men than I; but they move lightly as birds. . . . Now I have to stop for rest every half-a-dozen steps. . . . The line of broken straw sandals follows the zigzags we take. . . . At last — at last another door in the face of the mountain. Enter the fourth station, and fling myself down upon the mats. Time, 10:30 a. m. Height, only 7,937 feet; — yet it seemed such a distance!

Off again. . . . Way worse and worse. . . . Feel a new distress due to the rarefaction of the air. Heart beating as in a high fever. . . . Slope has become very rough. It is no longer soft ashes

and sand mixed with stones, but stones only, — fragments of lava, lumps of pumice, scoriæ of every sort, all angled as if freshly broken with a hammer. All would likewise seem to have been expressly shaped so as to turn upside-down when trodden upon. Yet I must confess that they never turn under the feet of the gōriki. . . . The cast-off sandals strew the slope in ever-increasing numbers. . . . But for the gōriki I should have had ever so many bad tumbles: they cannot prevent me from slipping; but they never allow me to fall. Evidently I am not fitted to climb mountains. . . . Height, 8,659 feet — but the fifth station is shut up! Must keep zigzagging on to the next. Wonder how I shall ever be able to reach it! . . . And there are people still alive who have climbed Fuji three and four times, *for pleasure!* . . . Dare not look back. See nothing but the black stones always turning under me, and the bronzed feet of those marvellous gōriki who never slip, never pant, and never perspire. . . . Staff begins to hurt my hand. . . . Gōriki push and pull: it is shameful of me, I know, to give them so much trouble. . . . Ah! sixth station! — may all the myriads of the gods bless my gōriki! Time, 2:07 p. m. Height, 9,317 feet.

22 Exotics and Retrospectives

Resting, I gaze through the doorway at the abyss below. The land is now dimly visible only through rents in a prodigious wilderness of white clouds; and within these rents everything looks almost black. . . . The horizon has risen frightfully, — has expanded monstrously. . . . My gōriki warn me that the summit is still miles away. I have been too slow. We must hasten upward.

Certainly the zigzag is steeper than before. . . . With the stones now mingle angular rocks; and we sometimes have to flank queer black bulks that look like basalt. . . . On the right rises, out of sight, a jagged black hideous ridge, — an ancient lava-stream. The line of the left slope still shoots up, straight as a bow-string. . . . Wonder if the way will become any steeper; — doubt whether it can possibly become any rougher. Rocks dislodged by my feet roll down soundlessly; — I am afraid to look after them. Their noiseless vanishing gives me a sensation like the sensation of falling in dreams. . . .

There is a white gleam overhead — the lowermost verge of an immense stretch of snow. . . . Now we are skirting a snow-filled gully, — the

lowermost of those white patches which, at first sight of the summit this morning, seemed scarcely an inch long. It will take an hour to pass it. . . . A guide runs forward, while I rest upon my staff, and returns with a large ball of snow. What curious snow! Not flaky, soft, white snow, but a mass of transparent globules,—exactly like glass beads. I eat some, and find it deliciously refreshing. . . . The seventh station is closed. How shall I get to the eighth? . . . Happily, breathing has become less difficult. . . . The wind is upon us again, and black dust with it. The gōriki keep close to me, and advance with caution. . . . I have to stop for rest at every turn on the path;—cannot talk for weariness. . . . I do not feel;—I am much too tired to feel. . . . How I managed it, I do not know;—but I have actually got to the eighth station! Not for a thousand millions of dollars will I go one step further to-day. Time, 4:40 p. m. Height, 10,693 feet.

24 Exotics and Retrospectives

V

It is much too cold here for rest without winter clothing; and now I learn the worth of the heavy robes provided by the guides. The robes are blue, with big white Chinese characters on the back, and are padded thickly as bedquilts; but they feel light; for the air is really like the frosty breath of February. . . . A meal is preparing; — I notice that charcoal at this elevation acts in a refractory manner, and that a fire can be maintained only by constant attention. . . . Cold and fatigue sharpen appetite: we consume a surprising quantity of *Zō-sui*, — rice boiled with eggs and a little meat. By reason of my fatigue and of the hour, it has been decided to remain here for the night.

Tired as I am, I cannot but limp to the doorway to contemplate the amazing prospect. From within a few feet of the threshold, the ghastly slope of rocks and cinders drops down into a prodigious disk of clouds miles beneath us, — clouds of countless forms, but mostly wreathings and fluffy pilings; — and the whole huddling mass,

reaching almost to the horizon, is blinding white under the sun. (By the Japanese, this tremendous cloud-expanse is well named *Wata-no-Umi*, "the Sea of Cotton.") The horizon itself — enormously risen, phantasmally expanded — seems half-way up above the world: a wide luminous belt ringing the hollow vision. Hollow, I call it, because extreme distances below the sky-line are sky-colored and vague, — so that the impression you receive is not of being on a point under a vault, but of being upon a point rising into a stupendous blue sphere, of which this huge horizon would represent the equatorial zone. To turn away from such a spectacle is not possible. I watch and watch until the dropping sun changes the colors, — turning the Sea of Cotton into a Fleece of Gold. Half-round the horizon a yellow glory grows and burns. Here and there beneath it, through cloudrifts, colored vaguenesses define: I now see golden water, with long purple headlands reaching into it, with ranges of violet peaks thronging behind it; — these glimpses curiously resembling portions of a tinted topographical map. Yet most of the landscape is pure delusion. Even my guides, with their long experience and their eagle-sight, can scarcely distinguish the real from

26 Exotics and Retrospectives

the unreal; — for the blue and purple and violet clouds moving under the Golden Fleece, exactly mock the outlines and the tones of distant peaks and capes: you can detect what is vapor only by its slowly shifting shape. . . . Brighter and brighter glows the gold. Shadows come from the west, — shadows flung by cloud-pile over cloud-pile; and these, like evening shadows upon snow, are violaceous blue. . . . Then orange-tones appear in the horizon; then smouldering crimson. And now the greater part of the Fleece of Gold has changed to cotton again, — white cotton mixed with pink. . . . Stars thrill out. The cloud-waste uniformly whitens; — thickening and packing to the horizon. The west glooms. Night rises; and all things darken except that wondrous unbroken world-round of white, — the Sea of Cotton.

The station-keeper lights his lamps, kindles a fire of twigs, prepares our beds. Outside it is bitterly cold, and, with the fall of night, becoming colder. Still I cannot turn away from that astounding vision. . . . Countless stars now flicker and shiver in the blue-black sky. Nothing whatever of the material world remains visible, except the

black slope of the peak before my feet. The enormous cloud-disk below continues white ; but to all appearance it has become a liquidly level white, without forms, — a white flood. It is no longer the Sea of Cotton. It is a Sea of Milk, the Cosmic Sea of ancient Indian legend, — and always self-luminous, as with ghostly quickenings.

VI

Squatting by the wood fire, I listen to the gōriki and the station-keeper telling of strange happenings on the mountain. One incident discussed I remember reading something about in a Tōkyō paper : I now hear it retold by the lips of a man who figured in it as a hero.

A Japanese meteorologist named Nonaka, attempted last year the rash undertaking of passing the winter on the summit of Fuji for purposes of scientific study. It might not be difficult to winter upon the peak in a solid observatory furnished with a good stove, and all necessary comforts ; but Nonaka could afford only a small wooden hut, in which he would be obliged to spend the cold season *without fire!* His young wife in-

28 Exotics and Retrospectives

sisted on sharing his labors and dangers. The couple began their sojourn on the summit toward the close of September. In midwinter news was brought to Gotemba that both were dying.

Relatives and friends tried to organize a rescue-party. But the weather was frightful; the peak was covered with snow and ice; the chances of death were innumerable; and the *gōriki* would not risk their lives. Hundreds of dollars could not tempt them. At last a desperate appeal was made to them as representatives of Japanese courage and hardihood: they were assured that to suffer a man of science to perish, without making even one plucky effort to save him, would disgrace the country; — they were told that the national honor was in their hands. This appeal brought forward two volunteers. One was a man of great strength and daring, nicknamed by his fellow-guides, *Oni-guma*, “the Demon-Bear,” the other was the elder of my *gōriki*. Both believed that they were going to certain destruction. They took leave of their friends and kindred, and drank with their families the farewell cup of water, — *midzu-no-sakazuki*, — in which those about to be separated by death pledge each other. Then, after having thickly

wrapped themselves in cotton-wool, and made all possible preparation for ice climbing, they started, — taking with them a brave army-surgeon who had offered his services, without fee, for the rescue. After surmounting extraordinary difficulties, the party reached the hut; but the inmates refused to open! Nonaka protested that he would rather die than face the shame of failure in his undertaking; and his wife said that she had resolved to die with her husband. Partly by forcible, and partly by gentle means, the pair were restored to a better state of mind. The surgeon administered medicines and cordials; the patients, carefully wrapped up, were strapped to the backs of the guides; and the descent was begun. My gōriki, who carried the lady, believes that the gods helped him on the ice-slopes. More than once, all thought themselves lost; but they reached the foot of the mountain without one serious mishap. After weeks of careful nursing, the rash young couple were pronounced out of danger. The wife suffered less, and recovered more quickly, than the husband.

The gōriki have cautioned me not to venture outside during the night without calling them.

30 Exotics and Retrospectives

They will not tell me why ; and their warning is peculiarly uncanny. From previous experiences during Japanese travel, I surmise that the danger implied is supernatural ; but I feel that it would be useless to ask questions.

The door is closed and barred. I lie down between the guides, who are asleep in a moment, as I can tell by their heavy breathing. I cannot sleep immediately ;—perhaps the fatigues and the surprises of the day have made me somewhat nervous. I look up at the rafters of the black roof,— at packages of sandals, bundles of wood, bundles of many indistinguishable kinds there stowed away or suspended, and making queer shadows in the lamplight. . . . It is terribly cold, even under my three quilts ; and the sound of the wind outside is wonderfully like the sound of great surf,— a constant succession of bursting roars, each followed by a prolonged hiss. The hut, half buried under tons of rock and drift, does not move ; but the sand does, and trickles down between the rafters ; and small stones also move after each fierce gust, with a rattling just like the clatter of shingle in the pull of a retreating wave.

4. *a. m.* — Go out alone, despite last evening's warning, but keep close to the door. There is a great and icy blowing. The Sea of Milk is unchanged: it lies far below this wind. Over it the moon is dying. . . . The guides, perceiving my absence, spring up and join me. I am reproved for not having awakened them. They will not let me stay outside alone: so I turn in with them.

Dawn: a zone of pearl grows round the world. The stars vanish; the sky brightens. A wild sky, with dark wrack drifting at an enormous height. The Sea of Milk has turned again into Cotton,—and there are wide rents in it. The desolation of the black slope, — all the ugliness of slaggy rock and angled stone, again defines. . . . Now the cotton becomes disturbed; — it is breaking up. A yellow glow runs along the east like the glare of a wind-blown fire. . . . Alas! I shall not be among the fortunate mortals able to boast of viewing from Fuji the first lifting of the sun! Heavy clouds have drifted across the horizon at the point where he should rise. . . . Now I know that he has risen; because the upper edges of those purple rags of cloud are burning like charcoal. But I have been so disappointed!

32 Exotics and Retrospectives

More and more luminous the hollow world. League-wide heapings of cottony cloud roll apart. Fearfully far-away there is a light of gold upon water: the sun here remains viewless, but the ocean sees him. It is not a flicker, but a burnished glow; — at such a distance rippings are invisible. . . . Further and further scattering, the clouds unveil a vast grey and blue landscape; — hundreds and hundreds of miles throng into vision at once. On the right I distinguish Tōkyō bay, and Kamakura, and the holy island of Enoshima (no bigger than the dot over this letter “i”); — on the left the wilder Suruga coast, and the blue-toothed promontory of Idzu, and the place of the fishing-village where I have been summering, — the merest pin-point in that tinted dream of hill and shore. Rivers appear but as sun-gleams on spider-threads; — fishing-sails are white dust clinging to the grey-blue glass of the sea. And the picture alternately appears and vanishes while the clouds drift and shift across it, and shape themselves into spectral islands and mountains and valleys of all Elysian colors. . . .

VII

6:40 *a. m.* — Start for the top. . . . Hardest and roughest stage of the journey, through a wilderness of lava-blocks. The path zigzags between ugly masses that project from the slope like black teeth. The trail of cast-away sandals is wider than ever. . . . Have to rest every few minutes. . . . Reach another long patch of the snow that looks like glass-beads, and eat some. The next station — a half-station — is closed; and the ninth has ceased to exist. . . . A sudden fear comes to me, not of the ascent, but of the prospective descent by a route which is too steep even to permit of comfortably sitting down. But the guides assure me that there will be no difficulty, and that most of the return-journey will be by another way, — over the interminable level which I wondered at yesterday, — nearly all soft sand, with very few stones. It is called the *bashiri* (“glissade”); and we are to descend at a run! . . .

All at once a family of field-mice scatter out from under my feet in panic; and the *gōriki* behind me catches one, and gives it to me. I hold

34 Exotics and Retrospectives

the tiny shivering life for a moment to examine it, and set it free again. These little creatures have very long pale noses. How do they live in this waterless desolation, — and at such an altitude, — especially in the season of snow? For we are now at a height of more than eleven thousand feet! The *gōriki* say that the mice find roots growing under the stones. . . .

Wilder and steeper; — for me, at least, the climbing is sometimes on all fours. There are barriers which we surmount with the help of ladders. There are fearful places with Buddhist names, such as the *Sai-no-Kawara*, or Dry Bed of the River of Souls, — a black waste strewn with heaps of rock, like those stone-piles which, in Buddhist pictures of the underworld, the ghosts of children build. . . .

Twelve thousand feet, and something, — the top! Time, 8:20 a. m. . . . Stone huts; Shintō shrine with *tōrii*; icy well, called the Spring of Gold; stone tablet bearing a Chinese poem and the design of a tiger; rough walls of lava-blocks round these things, — possibly for protection against the wind. Then the huge dead crater, — probably between a quarter of a

mile and half-a-mile wide, but shallowed up to within three or four hundred feet of the verge by volcanic detritus,—a cavity horrible even in the tones of its yellow crumbling walls, streaked and stained with every hue of scorching. I perceive that the trail of straw sandals ends *in* the crater. Some hideous over-hanging cusps of black lava—like the broken edges of a monstrous cicatrix—project on two sides several hundred feet above the opening; but I certainly shall not take the trouble to climb them. Yet these,—seen through the haze of a hundred miles,—through the soft illusion of blue spring-weather,—appear as the opening snowy petals of the bud of the Sacred Lotos! . . . No spot in this world can be more horrible, more atrociously dismal, than the cindered tip of the Lotos as you stand upon it.

But the view—the view for a hundred leagues,—and the light of the far faint dreamy world,—and the fairy vapors of morning,—and the marvellous wreathings of cloud: all this, and only this, consoles me for the labor and the pain. . . . Other pilgrims, earlier climbers,—poised upon the highest crag, with faces turned to the tremendous East,—are clapping their hands in Shintō prayer, saluting the mighty

36 Exotics and Retrospectives

Day. . . . The immense poetry of the moment enters into me with a thrill. I know that the colossal vision before me has already become a memory ineffaceable, — a memory of which no luminous detail can fade till the hour when thought itself must fade, and the dust of these eyes be mingled with the dust of the myriad million eyes that also have looked, in ages forgotten before my birth, from the summit supreme of Fuji to the Rising of the Sun.

Insect-Musicians

Insect-Musicians

Mushi yo mushi,
Naité ingwa ga
Tsukuru nara ?

“O insect, insect! — think you that Karma can be exhausted by song?” — *Japanese poem.*

I

IF you ever visit Japan, be sure to go to at least one temple-festival, — *en-nichi*. The festival ought to be seen at night, when everything shows to the best advantage in the glow of countless lamps and lanterns. Until you have had this experience, you cannot know what Japan is, — you cannot imagine the real charm of queer-ness and prettiness, the wonderful blending of grotesquery and beauty, to be found in the life of the common people.

In such a night you will probably let yourself drift awhile with the stream of sight-seers through

40 Exotics and Retrospectives

dazzling lanes of booths full of toys indescribable — dainty puerilities, fragile astonishments, laughter-making oddities ; — you will observe representations of demons, gods, and goblins ; — you will be startled by *mandō* — immense lantern-transparencies, with monstrous faces painted upon them ; — you will have glimpses of jugglers, acrobats, sword-dancers, fortune-tellers ; — you will hear everywhere, above the tumult of voices, a ceaseless blowing of flutes and booming of drums. All this may not be worth stopping for. But presently, I am almost sure, you will pause in your promenade to look at a booth illuminated like a magic-lantern, and stocked with tiny wooden cages out of which an incomparable shrilling proceeds. The booth is the booth of a vendor of singing-insects ; and the storm of noise is made by the insects. The sight is curious ; and a foreigner is nearly always attracted by it.

But having satisfied his momentary curiosity, the foreigner usually goes on his way with the idea that he has been inspecting nothing more remarkable than a particular variety of toys for children. He might easily be made to understand that the insect-trade of Tōkyō alone represents a yearly value of thousands of dollars ; but he would

certainly wonder if assured that the insects themselves are esteemed for the peculiar character of the sounds which they make. It would not be easy to convince him that in the æsthetic life of a most refined and artistic people, these insects hold a place not less important or well-deserved than that occupied in Western civilization by our thrushes, linnets, nightingales and canaries. What stranger could suppose that a literature one thousand years old, — a literature full of curious and delicate beauty, — exists upon the subject of these short-lived insect-pets?

The object of the present paper is, by elucidating these facts, to show how superficially our travellers might unconsciously judge the most interesting details of Japanese life. But such misjudgments are as natural as they are inevitable. Even with the kindest of intentions it is impossible to estimate correctly at sight anything of the extraordinary in Japanese custom, — because the extraordinary nearly always relates to feelings, beliefs, or thoughts about which a stranger cannot know anything.

Before proceeding further, let me observe that the domestic insects of which I am going to

42 Exotics and Retrospectives

speak, are mostly night-singers, and must not be confounded with the *semi* (cicadæ), mentioned in former essays of mine. I think that the cicadæ, — even in a country so exceptionally rich as is Japan in musical insects, — are wonderful melodists in their own way. But the Japanese find as much difference between the notes of night-insects and of cicadæ as we find between those of larks and sparrows; and they relegate their cicadæ to the vulgar place of chatterers. *Semi* are therefore never caged. The national liking for caged insects does not mean a liking for mere noise; and the note of every insect in public favor must possess either some rhythmic charm, or some mimetic quality celebrated in poetry or legend. The same fact is true of the Japanese liking for the chant of frogs. It would be a mistake to suppose that all kinds of frogs are considered musical; but there are particular species of very small frogs having sweet notes; and these are caged and petted.

Of course, in the proper meaning of the word, insects do not *sing*; but in the following pages I may occasionally employ the terms “singer” and “singing-insect,” — partly because of their convenience, and partly because of their corre-

spondence with the language used by Japanese insect-dealers and poets, describing the "voices" of such creatures.

II

There are many curious references in the old Japanese classic literature to the custom of keeping musical insects. For example in the chapter entitled *Nowaki*¹ of the famous novel "Genji Monogatari," written in the latter part of the tenth century by the Lady Murasaki-Shikibu, it is stated: "The maids were ordered to descend to the garden, and give some water to the insects." But the first definite mention of cages for singing-insects would appear to be the following passage from a work entitled *Chomon-Shū*:—"On the twelfth day of the eighth month of the second year of Kaho [1095 A. D.], the Emperor ordered his pages and chamberlains to go to Sagano and find some insects. The Emperor gave them a

¹ *Nowaki* is the name given to certain destructive storms usually occurring toward the end of autumn. All the chapters of the Genji Monogatari have remarkably poetical and effective titles. There is an English translation, by Mr. Kenchō Suyematsu, of the first seventeen chapters.

44 Exotics and Retrospectives

cage of network of bright purple thread. All, even the head-chaplain and his attendants, taking horses from the Right and the Left Imperial Mews, then went on horseback to hunt for insects. Tokinori Ben, at that time holding the office of *Kurando*,¹ proposed to the party as they rode toward Sagano, a subject for poetical composition. The subject was, *Looking for insects in the fields*. On reaching Sagano, the party dismounted, and walked in various directions for a distance of something more than ten *chō*,² and sent their attendants to catch the insects. In the evening they returned to the palace. They put into the cage some *hagi*³ and *ominameshi* [for the insects]. The cage was respectfully presented to the Empress. There was *saké*-drinking in the palace that evening; and many poems were composed. The Empress and her court-ladies joined in the making of the poems."

This would appear to be the oldest Japanese record of an insect-hunt, — though the amuse-

¹ The Kurando, or Kurōdo, was an official intrusted with the care of the imperial records.

² A *chō* is about one-fifteenth of a mile.

³ *Hagi* is the name commonly given to the bush-clover. *Ominameshi* is the common term for the *valeriana officinalis*.

ment may have been invented earlier than the period of Kaho. By the seventeenth century it seems to have become a popular diversion; and night-hunts were in vogue as much as day-hunts. In the *Teikoku Bunshū*, or collected works of the poet Teikoku, who died during the second year of Shōwō (1653), there has been preserved one of the poet's letters which contains a very interesting passage on the subject. "Let us go insect-hunting this evening," — writes the poet to his friend. "It is true that the night will be very dark, since there is no moon; and it may seem dangerous to go out. But there are many people now going to the graveyards every night, because the Bon festival is approaching¹; — therefore the way to the fields will not be lonesome for us. I have prepared many lanterns; — so the *bata-ori*, *matsumushi*, and other insects will probably come to the lanterns in great number."

It would also seem that the trade of insect-seller (*mushiya*) existed in the seventeenth century; for in a diary of that time, known as

¹ That is to say, there are now many people who go every night to the graveyards, to decorate and prepare the graves before the great Festival of the Dead.

46 Exotics and Retrospectives

the Diary of Kikaku, the writer speaks of his disappointment at not finding any insect-dealers in Yedo, — tolerably good evidence that he had met such persons elsewhere. “On the thirteenth day of the sixth month of the fourth year of Teikyo [1687], I went out,” he writes, “to look for *kirigirisu*-sellers. I searched for them in Yotsuya, in Kōjimachi, in Hongō, in Yushimasa, and in both divisions of Kanda-Sudamachō¹; but I found none.”

As we shall presently see, the *kirigirisu* was not sold in Tōkyō until about one hundred and twenty years later.

But long before it became the fashion to keep singing-insects, their music had been celebrated by poets as one of the æsthetic pleasures of the autumn. There are charming references to singing-insects in poetical collections made during the tenth century, and doubtless containing many compositions of a yet earlier period. And just as places famous for cherry, plum, or other blossoming trees, are still regularly visited every year by thousands and tens of thousands, merely

¹ Most of these names survive in the appellations of well-known districts of the present Tōkyō.

for the delight of seeing the flowers in their seasons, — so in ancient times city-dwellers made autumn excursions to country-districts simply for the pleasure of hearing the chirruping choruses of crickets and of locusts, — the night-singers especially. Centuries ago places were noted as pleasure-resorts solely because of this melodious attraction ; — such were Musashino (now Tōkyō), Yatano in the province of Echizen, and Mano in the province of Ōmi. Somewhat later, probably, people discovered that each of the principal species of singing-insects haunted by preference some particular locality, where its peculiar chanting could be heard to the best advantage ; and eventually no less than eleven places became famous throughout Japan for different kinds of insect-music.

The best places to hear the *matsumushi* were: —

- (1) Arashiyama, near Kyōto, in the province of Yamashiro ;
- (2) Sumiyoshi, in the province of Settsu ;
- (3) Miyagino, in the province of Mutsu.

The best places to hear the *suzumushi* were: —

- (4) Kagura-ga-Oka, in Yamashiro ;
- (5) Ogura-yama, in Yamashiro ;

48 Exotics and Retrospectives

- (6) Suzuka-yama, in Isé ;
- (7) Narumi, in Owari.

The best places to hear the *kirigirisu* were :—

- (8) Sagano, in Yamashiro ;
- (9) Takeda-no-Sato, in Yamashiro ;
- (10) Tatsuta-yama, in Yamato ;
- (11) Ono-no-Shinowara, in Ōmi.

Afterwards, when the breeding and sale of singing-insects became a lucrative industry, the custom of going into the country to hear them gradually went out of fashion. But even to-day city-dwellers, when giving a party, will sometimes place cages of singing-insects among the garden-shrubbery, so that the guests may enjoy not only the music of the little creatures, but also those memories or sensations of rural peace which such music evokes.

III

The regular trade in musical insects is of comparatively modern origin. In Tōkyō its beginnings date back only to the Kwansei era (1789-1800),— at which period, however, the

capital of the Shōgunate was still called Yedo. A complete history of the business was recently placed in my hands, — a history partly compiled from old documents, and partly from traditions preserved in the families of several noted insect-merchants of the present day.

The founder of the Tōkyō trade was an itinerant foodseller named Chūzō, originally from Echigo, who settled in the Kanda district of the city in the latter part of the eighteenth century. One day, while making his usual rounds, it occurred to him to capture a few of the *suzumushi*, or bell-insects, then very plentiful in the Negishi quarter, and to try the experiment of feeding them at home. They thrived and made music in confinement; and several of Chūzō's neighbors, charmed by their melodious chirruping, asked to be supplied with *suzumushi* for a consideration. From this accidental beginning, the demand for *suzumushi* grew rapidly to such proportions that the foodseller at last decided to give up his former calling and to become an insect-seller.

Chūzō only caught and sold insects: he never imagined that it would be more profitable to breed them. But the fact was presently discov-

50 Exotics and Retrospectives

ered by one of his customers,— a man named Kiriyama, then in the service of the Lord Aoyama Shimodzuké-no-Kami. Kiriyama had bought from Chūzō several *suzumushi*, which were kept and fed in a jar half-filled with moist clay. They died in the cold season ; but during the following summer Kiriyama was agreeably surprised to find the jar newly peopled with a number of young ones, evidently born from eggs which the first prisoners had left in the clay. He fed them carefully, and soon had the pleasure, my chronicler says, of hearing them “ begin to sing in small voices.” Then he resolved to make some experiments ; and, aided by Chūzō, who furnished the males and females, he succeeded in breeding not only *suzumushi*, but three other kinds of singing-insects also,— *kantan*, *matsumushi*, and *kutsuwamushi*. He discovered, at the same time, that, by keeping his jars in a warm room, the insects could be hatched considerably in advance of the natural season. Chūzō sold for Kiriyama these home-bred singers ; and both men found the new undertaking profitable beyond expectation.

The example set by Kiriyama was imitated by a *tabiya*, or stocking-maker named Yasubei (com-

1. A FORM OF INSECT CAGE. 2. CAGE FOR LARGE MUSICAL INSECTS, — *Kirigirisu, Kutswamushi, etc.*

3. CAGE FOR SMALL MUSICAL INSECTS, OR FIRE-FLIES

monly known as Tabiya Yasubei by reason of his calling), who lived in Kanda-ku. Yasubei likewise made careful study of the habits of singing-insects, with a view to their breeding and nourishment; and he soon found himself able to carry on a small trade in them. Up to that time the insects sold in Yedo would seem to have been kept in jars or boxes: Yasubei conceived the idea of having special cages manufactured for them. A man named Kondō, vassal to the Lord Kamei of Honjō-ku, interested himself in the matter, and made a number of pretty little cages which delighted Yasubei, and secured a large order from him. The new invention found public favor at once; and Kondō soon afterwards established the first manufactory of insect-cages.

The demand for singing-insects increased from this time so rapidly, that Chūzō soon found it impossible to supply all his would-be customers directly. He therefore decided to change his business to wholesale trade, and to sell to retail dealers only. To meet orders, he purchased largely from peasants in the suburbs and elsewhere. Many persons were employed by him; and Yasubei and others paid him a fixed annual sum for sundry rights and privileges.

52 Exotics and Retrospectives

Some time after this Yasubei became the first itinerant-vendor of singing-insects. He walked through the streets crying his wares; but hired a number of servants to carry the cages. Tradition says that while going his rounds he used to wear a *katabira*¹ made of a much-esteemed silk stuff called *sukiya*, together with a fine Hakata-girdle; and that this elegant way of dressing proved of much service to him in his business.

Two men, whose names have been preserved, soon entered into competition with Yasubei. The first was Yasakura Yasuzō, of Honjō-ku, by previous occupation a *sabainin*, or property-agent. He prospered, and became widely known as Mushi-Yasu, — “Yasu-the-Insect-Man.” His success encouraged a former fellow-*sabainin*, Genbei of Uyeno, to go into the same trade. Genbei likewise found insect-selling a lucrative occupation, and earned for himself the sobriquet of Mushi-Gen, by which he is yet remembered.

¹ *Katabira* is a name given to many kinds of light textures used for summer-robcs. The material is usually hemp, but sometimes, as in the case referred to here, of fine silk. Some of these robes are transparent, and very beautiful. — Hakata, in Kyūshū, is still famous for the silk girdles made there. The fabric is very heavy and strong.

His descendants in Tōkyō to-day are *amé*¹-manufacturers; but they still carry on the hereditary insect-business during the summer and autumn months; and one of the firm was kind enough to furnish me with many of the facts recorded in this little essay.

Chūzō, the father and founder of all this curious commerce, died without children; and sometime in the period of Bunsei (1818-1829) his business was taken over by a distant relative named Yamasaki Seichirō. To Chūzō's business, Yamasaki joined his own,—that of a toy-merchant. About the same time a law was passed limiting the number of insect-dealers in the municipality to thirty-six. The thirty-six then formed themselves into a guild, called the Ōyama-Kō ("Ōyama Society"), having for patron the divinity Sekison-Sama of the mountain Ōyama in Sagami Province.² But in business the association

¹ *Amé* is a nutritive gelatinous extract obtained from wheat and other substances. It is sold in many forms—as candy, as a syrupy liquid resembling molasses, as a sweet hot drink, as a solid jelly. Children are very fond of it. Its principal element is starch-sugar.

² Ōyama mountain in Sagami is a great resort of Pilgrims. There is a celebrated temple there, dedicated to Iwanaga-Himé ("Long-Rock Princess"), sister of the

54 Exotics and Retrospectives

was known as the Yedō-Mushi-Kō, or Yedo Insect-Company.

It is not until after this consolidation of the trade that we hear of the *kirigirisu*, — the same musical insect which the poet Kikaku had vainly tried to buy in the city in 1687, — being sold in Yedo. One of the guild known as Mushiya Kojirō (“Kojirō the Insect-Merchant”), who did business in Honjō-Ku, returning to the city after a short visit to his native place in Kadzusa, brought back with him a number of *kirigirisu*, which he sold at a good profit. Although long famous elsewhere, these insects had never before been sold in Yedo.

“When Midzu Echizen-no-Kami,” says the chronicle, “became *machi-bugyō* (or chief magistrate) of Yedo, the law limiting the number of insect-dealers to thirty-six, was abolished.” Whether the guild was subsequently dissolved the chronicle fails to mention.

Kiriyama, the first to breed singing-insects artificially, had, like Chūzō, built up a prosperous trade. He left a son, Kaméjirō, who was adopted into the family of one Yumoto, living in Waséda,

beautiful Goddess of Fuji. Sekison-San is a popular name both for the divinity and for the mountain itself.

Ushigomé-ku. Kaméjirō brought with him to the Yumoto family the valuable secrets of his father's occupation ; and the Yumoto family is still celebrated in the business of insect breeding.

To-day the greatest insect-merchant in Tōkyō is said to be Kawasumi Kanésaburō, of Samonchō in Yotsuya-ku. A majority of the lesser dealers obtain their autumn stock from him. But the insects bred artificially, and sold in summer, are mostly furnished by the Yumoto house. Other noted dealers are Mushi-Sei, of Shitaya-ku, and Mushi-Toku, of Asakusa. These buy insects caught in the country, and brought to the city by the peasants. The wholesale dealers supply both insects and cages to multitudes of itinerant vendors who do business in the neighborhood of the parish-temples during the *en-nichi*, or religious festivals, — especially after dark. Almost every night of the year there are *en-nichi* in some quarter of the capital ; and the insect-sellers are rarely idle during the summer and autumn months.

Perhaps the following list of current Tōkyō prices¹ for singing-insects may interest the reader : —

¹ Prices of the year 1897.

56 Exotics and Retrospectives

Suzumushi	3 sen 5 rin, to 4 sen.
Matsumushi	4 " 5 "
Kantan	10 " 12 "
Kin-hibari	10 " 12 "
Kusa-hibari	10 " 12 "
Kuro-hibari	8 " 12 "
Kutsuwamushi	10 " 15 "
Yamato-suzu	8 " 12 "
Kirigirisu	12 " 15 "
Emma-kōrogi	5 "
Kanétataki	12 "
Umaoi	10 "

These prices, however, rule only during the busy period of the insect trade. In May and the latter part of June the prices are high, — for only artificially bred insects are then in the market. In July *kirigirisu* brought from the country will sell as low as one sen. The *kantan*, *kusa-hibari*, and *Yamato-suzu* sell sometimes as low as two sen. In August the *Emma-kōrogi* can be bought even at the rate of ten for one sen ; and in September the *kuro-hibari*, *kanétataki*, and *umaoi* sell for one or one and a half sen each. But there is little variation at any season in the prices of *suzumushi* and of *matsumushi*. These are never very dear, but never sell at less than three sen ; and there is always a demand for them. The *suzumushi* is the most popular of all ; and the

greater part of the profits annually made in the insect-trade is said to be gained on the sale of this insect.

IV

As will be seen from the foregoing price-list, twelve varieties of musical insects are sold in Tōkyō. Nine can be artificially bred, — namely the *suzumushi*, *matsumushi*, *kirigirisu*, *kantan*, *kutsuwamushi*, *Emma-kōrogi*, *kin-hibari*, *kusa-hibari* (also called *Asa-suzu*), and the *Yamato-suzu*, or *Yoshino-suzu*. Three varieties, I am

KANÉTATAKI ("THE BELL-RINGER") (natural size).

told, are not bred for sale, but captured for the market: these are the *kanétataki*, *umaoi* or *bataori*, and *kuro-hibari*. But a considerable

58 Exotics and Retrospectives

number of all the insects annually offered for sale, are caught in their native haunts.

The night-singers are, with few exceptions, easily taken. They are captured with the help of lanterns. Being quickly attracted by light, they approach the lanterns; and when near enough to be observed, they can readily be covered with nets or little baskets. Males and females are usually secured at the same time, for the creatures move about in couples. Only the males sing; but a certain number of females are always taken for breeding purposes. Males and females are kept in the same vessel only for breeding: they are never left together in a cage, because the male ceases to sing when thus mated, and will die in a short time after pairing.

The breeding pairs are kept in jars or other earthen vessels half-filled with moistened clay, and are supplied every day with fresh food. They do not live long: the male dies first, and the female survives only until her eggs have been laid. The young insects hatched from them, shed their skin in about forty days from birth, after which they grow more rapidly, and soon attain their full development. In their natural state these creatures are hatched a little before the

Doyō, or Period of Greatest Heat by the old calendar, — that is to say, about the middle of July; — and they begin to sing in October. But when bred in a warm room, they are hatched early in April; and, with careful feeding, they can be offered for sale before the end of May. When very young, their food is triturated and spread for them upon a smooth piece of wood; but the adults are usually furnished with unprepared food, — consisting of parings of egg-plant, melon-rind, cucumber-rind, or the soft interior parts of the white onion. Some insects, however, are specially nourished; — the *abura-kirigirisu*, for example, being fed with sugar-water and slices of musk-melon.

V

All the insects mentioned in the Tōkyō price-list are not of equal interest; and several of the names appear to refer only to different varieties of one species, — though on this point I am not positive. Some of the insects do not seem to have yet been scientifically classed; and I am no entomologist. But I can offer some general

60 Exotics and Retrospectives

notes on the more important among the little melodists, and free translations of a few out of the countless poems about them, — beginning with the *matsumushi*, which was celebrated in Japanese verse a thousand years ago :

*Matsumushi.*¹

As ideographically written, the name of this creature signifies “ pine-insect ;” but, as pronounced, it might mean also “ waiting-insect,” —

since the verb “ *matsu*,” “ to wait,” and the noun “ *matsu*,” “ pine,” have the same sound. It is chiefly upon this double meaning of the word as uttered that a host of Japanese poems about the *matsumushi* are

MATSUMUSHI (*slightly enlarged*). based. Some of these are very old, — dating back to the tenth century at least.

Although by no means a rare insect, the *matsumushi* is much esteemed for the peculiar clear-

¹ *Calyptotryphus Marmoratus.* (?)

ness and sweetness of its notes— (onomatopoeically rendered in Japanese by the syllables *chin-chirorin*, *chin-chirorin*), — little silvery shrillings which I can best describe as resembling the sound of an electric bell heard from a distance. The matsumushi haunts pine-woods and cryptomeria-groves, and makes its music at night. It is a very small insect, with a dark-brown back, and a yellowish belly.

Perhaps the oldest extant verses upon the matsumushi are those contained in the *Kokinshū*, — a famous anthology compiled in the year 905 by the court-poet Tsurayuki and several of his noble friends. Here we first find that play on the name of the insect as pronounced, which was to be repeated in a thousand different keys by a multitude of poets through the literature of more than nine hundred years: —

Aki no no ni
 Michi mo madoinu;
 Matsumushi no
 Koe suru kata ni
 Yadoya karamashi.

“ In the autumn-fields I lose my way ; — perhaps I might ask for lodging in the direction of the

62 Exotics and Retrospectives

cry of the waiting-insect ;” — that is to say, “might sleep to-night in the grass where the insects are waiting for me.” There is in the same work a much prettier poem on the *matsumushi* by Tsurayuki.

With dusk begins to cry the male of the Waiting-insect ; —
I, too, await my beloved, and, hearing, my longing grows.

The following poems on the same insect are less ancient but not less interesting : —

Forever past and gone, the hour of the promised advent ! —
Truly the Waiter’s voice is a voice of sadness now !

Parting is sorrowful always, — even the parting with
autumn !
O plaintive *matsumushi*, add not thou to my pain !

Always more clear and shrill, as the hush of the night grows
deeper,
The Waiting-insect’s voice ; — and I that wait in the garden,
Feel enter into my heart the voice and the moon together.

Suzumushi.¹

The name signifies “bell-insect ;” but the bell of which the sound is thus referred to is a very small bell, or a bunch of little bells such as a Shinto priestess uses in the sacred dances. The

¹ *Homeogryllus Japonicus*.

suzumushi is a great favorite with insect-fanciers, and is bred in great numbers for the market. In the wild state it is found in many parts of Japan; and at night the noise made by multitudes of *suzumushi* in certain lonesome places might easily be mistaken, — as it has been by myself more than once, — for the sound of rapids. The Japanese description of the insect as resem-

写

虫

SUZUMUSHI (slightly enlarged).

bling “a watermelon seed” — the black kind — is excellent. It is very small, with a black back, and a white or yellowish belly. Its tintinnabulation — *ri-i-i-i-in*, as the Japanese render the sound — might easily be mistaken for the tinkling of a *suzu*. Both the *matsumushi* and the *suzumushi* are mentioned in Japanese poems of the period of Engi (901–922).

Some of the following poems on the *suzumushi* are very old; others are of comparatively recent date: —

Yes, my dwelling is old: weeds on the roof are growing; —
But the voice of the *suzumushi* — that will never be old!

64 Exotics and Retrospectives

To-day united in love, — we who can meet so rarely!
Hear how the insects ring! — their bells to our hearts keep
time.

The tinkle of tiny bells, — the voices of *suzumushi*,
I hear in the autumn-dusk, — and think of the fields at home.

Even the moonshine sleeps on the dews of the garden-
grasses;
Nothing moves in the night but the *suzumushi*'s voice.

Heard in these alien fields, the voice of the *suzumushi*, —
Sweet in the evening-dusk, — sounds like the sound of
home.

Vainly the *suzumushi* exhausts its powers of pleasing,
Always, the long night through, my tears continue to flow!

Hark to those tinkling tones, — the chant of the *suzumushi*!
— If a jewel of dew could sing, it would tinkle with such a
voice!

Foolish-fond I have grown; — I feel for the *suzumushi*! —
In the time of the heavy rains, what will the creature do?

Hataori-mushi.

The *hataori* is a beautiful bright-green grasshopper, of very graceful shape. Two reasons are given for its curious name, which signifies "the Weaver." One is that, when held in a particular way, the struggling gestures of the creature resemble the movements of a girl weaving. The other reason is that its music seems to

imitate the sound of the reed and shuttle of a hand-loom in operation, — *ji-ī-ī-ī — chon-chon!*
— *ji-ī-ī-ī — chon-chon!*

There is a pretty folk-story about the origin of the *bataori* and the *kirigirisu*, which used to be told to Japanese children in former times. — Long, long ago, says the tale, there were two very dutiful daughters who supported their old blind father by the labor of their hands. The elder girl used to weave, and the younger to sew. When the old blind father died at last, these good girls grieved so much that they soon died also. One beautiful morning, some creatures of a kind never seen before were found making music above the graves of the sisters. On the tomb of the elder was a pretty green insect, producing sounds like those made by a girl weaving, — *ji-ī-ī-ī, chon-chon! ji-ī-ī-ī, chon-chon!* This was the first *bataori-mushi*. On the tomb of the younger sister was an insect which kept crying out, “*Tsuzuré — sasé, sasé! — tsuzuré, tsuzuré — sasé, sasé, sasé!*” (Torn clothes — patch, patch them up! — torn clothes, torn clothes — patch up, patch up, patch up!) This was the first *kirigirisu*. Then everybody knew that the

66 Exotics and Retrospectives

spirits of the good sisters had taken those shapes. Still every autumn they cry to wives and daughters to work well at the loom, and warn them to repair the winter garments of the household before the coming of the cold.

Such poems as I have been able to obtain about the *bataori* consist of nothing more than pretty fancies. Two, of which I offer free renderings, are ancient, — the first by Tsurayuki ; the second by a poetess classically known as “Akinaka’s Daughter” : —

Weaving-insects I hear ; and the fields, in their autumn-colors,
Seem of Chinese-brocade : — was this the weavers’ work ?
Gossamer-threads are spread over the shrubs and grasses :
Weaving-insects I hear ; — do they weave with spider-silk ?

Umaoi.

The *umaoi* is sometimes confounded with the *bataori*, which it much resembles. But the true *umaoi* — (called *junta* in Izumo) — is a shorter and thicker insect than the *bataori* ; and has at its tail a hook-shaped protuberance, which the weaver-insect has not. Moreover, there is some difference in the sounds made by the two creatures. The music of the *umaoi* is not “*ji-i-i-i*,”

UMAOI (natural size).

— *chon-chon*," but, " *χu-ī-in-tzō!* — *χu-ī-in-tzō!*" — say the Japanese.

Kirigirisu.¹

There are different varieties of this much-prized insect. The *abura-kirigirisu*, a day-singer, is a delicate creature, and must be carefully nourished in confinement. The *tachi-kirigirisu*, a night-singer, is more commonly found in the market. Captured *kirigirisu* sold in Tōkyō are mostly from the neighborhood of Itabashi, Niiso, and Todogawa; and these, which fetch high prices, are considered the best. They are large vigorous insects, uttering very clear notes. From Kujiukuri in Kadzusa other and much cheaper *kirigirisu* are brought to the capital; but these have a disagreeable odor, suffer from the attacks of a peculiar parasite, and are feeble musicians.

¹ *Locusta Japonica*. (?)

68 Exotics and Retrospectives

As stated elsewhere, the sounds made by the kirigirisu are said to resemble those of the Japanese words, "*Tsuzuré — sasé! sasé!*" (Torn clothes — patch up! patch up!); and a large proportion of the many poems written about the

KIRIGIRISU (*natural size*).

insect depend for interest upon ingenious but untranslatable allusions to those words. I offer renderings therefore of only two poems on the *kirigirisu*, — the first by an unknown poet in the *Kokinshū*; the second by Tadafusa: —

O Kirigirisu! when the clover changes color,
Are the nights then sad for you as for me that cannot
sleep?

O Kirigirisu! cry not, I pray, so loudly!
Hearing, my sorrow grows, — and the autumn-night is
long!

KUSA-HIBARI (*natural size*).

Kusa-hibari.

The *kusa-hibari*, or "Grass-Lark," — also called *Asa-suzu*, or "Morning-Bell;" *Yabu-suzu*, or "the Little Bell of the Bamboo-grove;" *Aki-kazé*, or "Autumn-Wind;" and *Ko-suzu-mushi*, or "the Child of the Bell-Insect," — is a day-singer. It is very small, — perhaps the smallest of the insect-choir, except the *Yamato-suzu*.

YAMATO-SUZU
("LITTLE-BELL OF YAMATO")
(*natural size*).

70 Exotics and Retrospectives

KIN-HIBARI *natural size*).

Kin-hibari.

The *kin-hibari*, or “Golden Lark” used to be found in great numbers about the neighborhood of the well-known Shinobazu-no-iké, — the great lotus-pond of Ujyeno in Tōkyō; — but of late years it has become scarce there. The *kin-hibari* now sold in the capital are brought from Todogawa and Shimura.

Kuro-hibari.

The *kuro-hibari*, or “Black Lark,” is rather uncommon, and comparatively dear. It is caught in the country about Tōkyō, but is never bred.

KURO-HIBARI (*natural size*).

Kōrogi.

There are many varieties of this night-cricket, — called *kōrogi* from its music: — “*kiri-kiri-kiri-kiri!* — *kōro-kōro-kōro-kōro!* — *ghi-ī-ī-ī-ī-ī!*”

One variety, the *ebi-kōrogi*, or “shrimp-kōrogi,” does not make any sound. But the *uma-kōrogi*, or “horse-kōrogi;” the *Oni-kōrogi*, or “Demon-kōrogi;” and the *Emma-kōrogi*, or “Cricket-of-Emma¹ [King of the Dead],” are all good musicians. The color is blackish-brown, or

エ
ン
メ
コ
ヲ
ロ
ギ

EMMA-KŌROGI (natural size).

black ; — the best singing-varieties have curious wavy markings on the wings.

An interesting fact regarding the *kōrogi* is that mention of it is made in the very oldest collection of Japanese poems known, — the *Manyōshū*, probably compiled about the middle of the eighth

¹ Sanscrit: *Yama*. Probably this name was given to the insect on account of its large staring eyes. Images of King Emma are always made with very big and awful eyes.

72 Exotics and Retrospectives

century. The following lines, by an unknown poet, which contain this mention, are therefore considerably more than eleven hundred years old : —

Niwa-kusa ni
Murasamé furité
Kōrogi no
Naku oto kikeba
Aki tsukinikeri.

[“ Showers have sprinkled the garden-grass. Hearing the sound of the crying of the kōrogi, I know that the autumn has come.”]

エ
ン
マ
コ
ラ
ロ
ゲ

EMMA-KŌROGI.

Kutsuwamushi.

There are several varieties of this extraordinary creature, — also called onomatopoeically *gatcha-gatcha*, — which is most provokingly described in dictionaries as “ a kind of noisy cricket ” ! The variety commonly sold in Tōkyō has a green

back, and a yellowish-white abdomen; but there are also brown and reddish varieties. The *kutsuwamushi* is difficult to capture, but easy to breed. As the *tsuku-tsuku-bōshi* is the most wonderful musician among the sun-loving cicadae

KUTSUWAMUSHI (natural size).

or *semi*, so the *kutsuwamushi* is the most wonderful of night-crickets. It owes its name, which means "The Bridle-bit-Insect," to its noise, which resembles the jingling and ringing of the old-fashioned Japanese bridle-bit (*kutsuwa*). But

74 Exotics and Retrospectives

the sound is really much louder and much more complicated than ever was the jingling of a single *kutsurwa*; and the accuracy of the comparison is not easily discerned while the creature is storming beside you. Without the evidence of one's own eyes, it were hard to believe that so small a life could make so prodigious a noise. Certainly the vibratory apparatus in this insect must be very complicated. The sound begins with a thin sharp whizzing, as of leaking steam, and slowly strengthens; — then to the whizzing is suddenly added a quick dry clatter, as of castanets; — and then, as the whole machinery rushes into operation, you hear, high above the whizzing and the clatter, a torrent of rapid ringing tones like the tapping of a gong. These, the last to begin, are also the first to cease; then the castanets stop; and finally the whizzing dies; — but the full orchestra may remain in operation for several hours at a time, without a pause. Heard from far away at night the sound is pleasant, and is really so much like the ringing of a bridle-bit, that when you first listen to it you cannot but feel how much real poetry belongs to the name of this insect, — celebrated from of old as “playing at ghostly escort in ways where no man can pass.”

The most ancient poem on the *kutsuwamushi* is perhaps the following, by the Lady Idzumi-Shikibu : —

Waga seko wa
Koma ni makasété
Kinikeri to,
Kiku ni kikasuru
Kutsuwamushi kana !

— which might be thus freely rendered :

Listen ! — his bridle rings ; — that is surely my husband
Homeward hurrying now — fast as the horse can bear
him ! . . .

Ah ! my ear was deceived ! — only the Kutsuwamushi !

KANTAN (*natural size*).

Kantan.

This insect — also called *kantan-gisu*, and *kantan-no-kirigirisu*, — is a dark-brown night-cricket. Its note — “*χi-i-i-in*” — is peculiar: I can only compare it to the prolonged twang of a bow-string. But this comparison is not satisfactory, because there is a penetrant metallic quality in the twang, impossible to describe.

VI

Besides poems about the chanting of particular insects, there are countless Japanese poems, ancient and modern, upon the voices of night-insects in general, — chiefly in relation to the autumn season. Out of a multitude I have selected and translated a few of the more famous only, as typical of the sentiment or fancy of hundreds. Although some of my renderings are far from literal as to language, I believe that they express with tolerable faithfulness the thought and feeling of the originals: —

Not for my sake alone, I know, is the autumn's coming; —
Yet, hearing the insects sing, at once my heart grows sad.

KOKINSHŪ.

Faint in the moonshine sounds the chorus of insect-voices:
To-night the sadness of autumn speaks in their plaintive
tone.

I never can find repose in the chilly nights of autumn,
Because of the pain I hear in the insects' plaintive song.

How must it be in the fields where the dews are falling
thickly!
In the insect-voices that reach me I hear the tingling of cold.

Never I dare to take my way through the grass in autumn:
Should I tread upon insect-voices¹ — what would my feel-
ings be!

The song is ever the same, but the tones of the insects
differ,
Maybe their sorrows vary, according to their hearts

IDZUMI-SHIKIBU.

Changed is my childhood's home — all but those insect-
voices:
I think they are trying to speak of happier days that were.

These trembling dews on the grass — are they tears for the
death of autumn? —
Tears of the insect-singers that now so sadly cry?

It might be thought that several of the poems
above given were intended to express either a real
or an affected sympathy with imagined insect-
pain. But this would be a wrong interpretation.

¹ *Mushi no koe fumu.*

78 Exotics and Retrospectives

In most compositions of this class, the artistic purpose is to suggest, by indirect means, various phases of the emotion of love, — especially that melancholy which lends its own passionate tone to the aspects and the voices of nature. The baroque fancy that dew might be insect-tears, is by its very exaggeration intended to indicate the extravagance of grief, as well as to suggest that human tears have been freshly shed. The verses in which a woman declares that her heart has become too affectionate, since she cannot but feel for the bell-insect during a heavy shower, really bespeak the fond anxiety felt for some absent beloved, travelling in the time of the great rains. Again, in the lines about “treading on insect-voices,” the dainty scruple is uttered only as a hint of that intensification of feminine tenderness which love creates. And a still more remarkable example of this indirect double-suggestiveness is offered by the little poem prefacing this article, —

“O insect, insect! — think you that Karma can be exhausted by song?”

The Western reader would probably suppose that the insect-condition, or insect-state-of-being, is here referred to; but the real thought of the

speaker, presumably a woman, is that her own sorrow is the result of faults committed in former lives, and is therefore impossible to alleviate.

It will have been observed that a majority of the verses cited refer to autumn and to the sensations of autumn. Certainly Japanese poets have not been insensible to the real melancholy inspired by autumn, — that vague strange annual revival of ancestral pain: dim inherited sorrow of millions of memories associated through millions of years with the death of summer; — but in nearly every utterance of this melancholy, the veritable allusion is to grief of parting. With its color-changes, its leaf-whirlings, and the ghostly plaint of its insect-voices, autumn Buddhistically symbolizes impermanency, the certainty of bereavement, the pain that clings to all desire, and the sadness of isolation.

But even if these poems on insects were primarily intended to shadow amorous emotion, do they not reflect also for us the subtlest influences of nature, — wild pure nature, — upon imagination and memory? Does not the place accorded to insect-melody, in the home-life as well as in the literature of Japan, prove an æsthetic sensi-

80 Exotics and Retrospectives

bility developed in directions that yet remain for us almost unexplored? Does not the shrilling booth of the insect-seller at a night-festival proclaim even a popular and universal comprehension of things divined in the West only by our rarest poets: — the pleasure-pain of autumn's beauty, the weird sweetness of the voices of the night, the magical quickening of remembrance by echoes of forest and field? Surely we have something to learn from the people in whose mind the simple chant of a cricket can awaken whole fairy-swarms of tender and delicate fancies. We may boast of being their masters in the mechanical, — their teachers of the artificial in all its varieties of ugliness; — but in the knowledge of the natural, — in the feeling of the joy and beauty of earth, — they exceed us like the Greeks of old. Yet perhaps it will be only when our blind aggressive industrialism has wasted and sterilized their paradise, — substituting everywhere for beauty the utilitarian, the conventional, the vulgar, the utterly hideous, — that we shall begin with remorseful amazement to comprehend the charm of that which we destroyed.

A Question in the Zen Texts

A Question in the Zen Texts

I

MY friend opened a thin yellow volume of that marvellous text which proclaims at sight the patience of the Buddhist engraver. Movable Chinese types may be very useful; but the best of which they are capable is ugliness itself when compared with the beauty of the old block-printing.

“ I have a queer story for you,” he said.

“ A Japanese story ? ”

“ No, — Chinese.”

“ What is the book ? ”

“ According to Japanese pronunciation of the Chinese characters of the title, we call it *Mu-Mon-Kwan*, which means ‘ The Gateless Barrier.’ It is one of the books especially studied by the Zen sect, or sect of Dhyâna. A peculiarity of some of the Dhyâna texts, — this being a good example, — is that they are not explanatory.

84 Exotics and Retrospectives

They only suggest. Questions are put ; but the student must think out the answers for himself. He must *think* them out, but not write them. You know that Dhyâna represents human effort to reach, through meditation, zones of thought beyond the range of verbal expression ; and any thought once narrowed into utterance loses all Dhyâna quality. . . . Well, this story is supposed to be true ; but it is used only for a Dhyâna question. There are three different Chinese versions of it ; and I can give you the substance of the three."

Which he did as follows : —

II

—*The story of the girl Ts'ing, which is told in the Lui-shwo-li-hwan-ki, cited by the Ching-tang-lub, and commented upon in the Wu-mu-hwan (called by the Japanese Mu-Mon-Kwan), which is a book of the Zen sect : —*

There lived in Han-yang a man called Chang-kien, whose child-daughter, Ts'ing, was of peerless beauty. He had also a nephew called Wang-Chau, — a very handsome boy. The

A Question in the Zen Texts 85

children played together, and were fond of each other. Once Kien jestingly said to his nephew: —“Some day I will marry you to my little daughter.” Both children remembered these words; and they believed themselves thus betrothed.

When Ts'ing grew up, a man of rank asked for her in marriage; and her father decided to comply with the demand. Ts'ing was greatly troubled by this decision. As for Chau, he was so much angered and grieved that he resolved to leave home, and go to another province. The next day he got a boat ready for his journey, and after sunset, without bidding farewell to any one, he proceeded up the river. But in the middle of the night he was startled by a voice calling to him, “Wait! — it is I!” — and he saw a girl running along the bank towards the boat. It was Ts'ing. Chau was unspeakably delighted. She sprang into the boat; and the lovers found their way safely to the province of Chuh.

In the province of Chuh they lived happily for six years; and they had two children. But Ts'ing could not forget her parents, and often longed to see them again. At last she said to her husband: — “Because in former time I could

86 Exotics and Retrospectives

not bear to break the promise made to you, I ran away with you and forsook my parents, — although knowing that I owed them all possible duty and affection. Would it not now be well to try to obtain their forgiveness?" "Do not grieve yourself about that," said Chau; — "we shall go to see them." He ordered a boat to be prepared; and a few days later he returned with his wife to Han-yang.

According to custom in such cases, the husband first went to the house of Kien, leaving Ts'ing alone in the boat. Kien, welcomed his nephew with every sign of joy, and said: —

"How much I have been longing to see you! I was often afraid that something had happened to you."

Chau answered respectfully: —

"I am distressed by the undeserved kindness of your words. It is to beg your forgiveness that I have come."

But Kien did not seem to understand. He asked: —

"To what matter do you refer?"

"I feared," said Chau, "that you were angry with me for having run away with Ts'ing. I took her with me to the province of Chuh."

A Question in the Zen Texts 87

"What Ts'ing was that?" asked Kien.

"Your daughter Ts'ing," answered Chau, beginning to suspect his father-in-law of some malevolent design.

"What are you talking about?" cried Kien, with every appearance of astonishment. "My daughter Ts'ing has been sick in bed all these years, — ever since the time when you went away."

"Your daughter Ts'ing," returned Chau, becoming angry, "has not been sick. She has been my wife for six years; and we have two children; and we have both returned to this place only to seek your pardon. Therefore please do not mock us!"

For a moment the two looked at each other in silence. Then Kien arose, and motioning to his nephew to follow, led the way to an inner room where a sick girl was lying. And Chau, to his utter amazement, saw the face of Ts'ing, — beautiful, but strangely thin and pale.

"She cannot speak," explained the old man; "but she can understand." And Kien said to her, laughingly: — "Chau tells me that you ran away with him, and that you gave him two children."

88 Exotics and Retrospectives

The sick girl looked at Chau, and smiled ; but remained silent.

“ Now come with me to the river,” said the bewildered visitor to his father-in-law. “ For I can assure you, — in spite of what I have seen in this house, — that your daughter Ts’ing is at this moment in my boat.”

They went to the river ; and there, indeed, was the young wife, waiting. And seeing her father, she bowed down before him, and besought his pardon.

Kien said to her : —

“ If you really be my daughter, I have nothing but love for you. Yet though you seem to be my daughter, there is something which I cannot understand. . . . Come with us to the house.”

So the three proceeded toward the house. As they neared it, they saw that the sick girl, — who had not before left her bed for years, — was coming to meet them, smiling as if much delighted. And the two Ts’ings approached each other. But then — nobody could ever tell how — they suddenly melted into each other, and became one body, one person, one Ts’ing, — even more beautiful than before, and showing no sign of sickness or of sorrow.

A Question in the Zen Texts 89

Kien said to Chau : —

“Ever since the day of your going, my daughter was dumb, and most of the time like a person who had taken too much wine. Now I know that her spirit was absent.”

Ts'ing herself said : —

“Really I never knew that I was at home. I saw Chau going away in silent anger; and the same night I dreamed that I ran after his boat. . . . But now I cannot tell which was really I, — the I that went away in the boat, or the I that stayed at home.”

III

“That is the whole of the story,” my friend observed. “Now there is a note about it in the *Mu-Mon-Kwan* that may interest you. This note says : — ‘The fifth patriarch of the Zen sect once asked a priest, — “*In the case of the separation of the spirit of the girl Ts'ing, which was the true Ts'ing?*”’ It was only because of this question that the story was cited in the book. But the question is not answered. The author only remarks : — ‘If you can decide which was

90 Exotics and Retrospectives

the real Ts'ing, then you will have learned that to go out of one envelope and into another is merely like putting up at an inn. But if you have not yet reached this degree of enlightenment, take heed that you do not wander aimlessly about the world. Otherwise, when Earth, Water, Fire, and Wind shall suddenly be dissipated, you will be like a crab with seven hands and eight legs, thrown into boiling water. And in that time do not say that you were never told about the *Thing*. . . . Now the *Thing* — ”

“ I do not want to hear about the *Thing*,” I interrupted, — “ nor about the crab with seven hands and eight legs. I want to hear about the clothes.”

“ What clothes ? ”

“ At the time of their meeting, the two Ts'ings would have been differently dressed, — very differently, perhaps ; for one was a maid, and the other a wife. Did the clothes of the two also blend together ? Suppose that one had a silk robe and the other a robe of cotton, would these have mixed into a texture of silk and cotton ? Suppose that one was wearing a blue girdle, and the other a yellow girdle, would the result have been a green girdle ? . . . Or did one Ts'ing simply slip out

A Question in the Zen Texts 91

of her costume, and leave it on the ground, like the cast-off shell of a cicada?"

"None of the texts say anything about the clothes," my friend replied: "so I cannot tell you. But the subject is quite irrelevant, from the Buddhist point of view. The doctrinal question is the question of what I suppose you would call the personality of Ts'ing."

"And yet it is not answered," I said.

"It is best answered," my friend replied, "by not being answered."

"How so?"

"Because there is no such thing as personality."

The Literature of the Dead

The Literature of the Dead

Shindaréba koso ikitaré.

“Only because of having died, does one enter into life.”

— *Buddhist proverb.*

I

BEHIND my dwelling, but hidden from view by a very lofty curtain of trees, there is a Buddhist temple, with a cemetery attached to it. The cemetery itself is in a grove of pines, many centuries old; and the temple stands in a great quaint lonesome garden. Its religious name is *Ji-shō-in*; but the people call it Kobudera, which means the Gnarled, or Knobby Temple, because it is built of undressed timber, — great logs of *binoki*, selected for their beauty or strangeness of shape, and simply prepared for the builder by the removal of limbs and bark. But such gnarled and knobby wood is precious: it is of the hardest and most enduring, and costs far more than com-

96 Exotics and Retrospectives

mon building-material, — as might be divined from the fact that the beautiful alcoves and the choicest parts of Japanese interiors are finished with wood of a similar kind. To build Kobudera was an undertaking worthy of a prince; and, as a matter of history, it was a prince who erected it, for a place of family worship. There is a doubtful tradition that two designs were submitted to him by the architect, and that he chose the more fantastic one under the innocent impression that undressed timber would prove cheap. But whether it owes its existence to a mistake or not, Kobudera remains one of the most interesting temples of Japan. The public have now almost forgotten its existence; — but it was famous in the time of Iyemitsu; and its appellation, Ji-shō-in, was taken from the kaimyō of one of the great Shogun's ladies, whose superb tomb may be seen in its cemetery. Before Meiji, the temple was isolated among woods and fields; but the city has now swallowed up most of the green spaces that once secluded it, and has pushed out the ugliest of new streets directly in front of its gate.

This gate — a structure of gnarled logs, with a tiled and tilted Chinese roof — is a fitting pref-

GATE OF KOBUDERA

ace to the queer style of the temple itself. From either gable-end of the gate-roof, a demon-head, grinning under triple horns, looks down upon the visitor.¹ Within, except at the hours of prayer, all is green silence. Children do not play in the

¹ Such figures are really elaborate tiles, and are called *onigawara*, or "demon-tiles." It may naturally be asked why demon-heads should be ever placed above Buddhist gate-ways. Originally they were not intended to represent demons, in the Buddhist sense, but guardian-spirits whose duty it was to drive demons away. The *onigawara* were introduced into Japan either from China or Korea—not improbably Korea; for we read that the first roof-tiles made in Japan were manufactured shortly after the introduction of the new faith by Korean priests, and under the supervision of Shōtoku Taishi, the princely founder and supporter of Japanese Buddhism. They were baked at Koizumi-mura, in Yamato;—but we are not told whether there were any of this extraordinary shape among them. It is worth while remarking that in Korea to-day you can see hideous faces painted upon house-doors,—even upon the gates of the royal palace; and these, intended merely to frighten away evil spirits, suggest the real origin of the demon-tiles. The Japanese, on first seeing such tiles, called them demon-tiles because the faces upon them resembled those conventionally given to Buddhist demons; and now that their history has been forgotten, they are popularly supposed to represent demon-guardians. There would be nothing contrary to Buddhist faith in the fancy;—for there are many legends of good demons. Besides, in the eternal order of divine law, even the worst demon must at last become a Buddha.

98 Exotics and Retrospectives

court — perhaps because the temple is a private one. The ground is everywhere hidden by a fine thick moss of so warm a color, that the brightest foliage of the varied shrubbery above it looks sombre by contrast; and the bases of walls, the pedestals of monuments, the stonework of the bell-tower, the masonry of the ancient well, are muffled with the same luminous growth. Maples and pines and cryptomerias screen the façade of the temple; and, if your visit be in autumn, you may find the whole court filled with the sweet heavy perfume of the *mokusei*¹-blossom. After having looked at the strange temple, you would find it worth while to enter the cemetery, by the black gate on the west side of the court.

I like to wander in that cemetery, — partly because in the twilight of its great trees, and in the silence of centuries which has gathered about them, one can forget the city and its turmoil, and dream out of space and time, — but much more because it is full of beauty, and of the poetry of great faith. Indeed of such poetry it possesses riches quite exceptional. Each Buddhist sect has

¹ *Osmantbus fragrans*. This is one of the very few Japanese plants having richly-perfumed flowers.

its own tenets, rites, and forms; and the special character of these is reflected in the iconography and epigraphy of its burial-grounds, — so that for any experienced eye a Tendai graveyard is readily distinguishable from a Shingon graveyard, or a Zen graveyard from one belonging to a Nichiren congregation. But at Kobudera the inscriptions and the sculptures peculiar to several Buddhist sects can be studied side by side. Founded for the Hokké, or Nichiren rite, the temple nevertheless passed, in the course of generations, under the control of other sects — the last being the Tendai; — and thus its cemetery now offers a most interesting medley of the emblems and the epitaphic formularies of various persuasions. It was here that I first learned, under the patient teaching of an Oriental friend, something about the Buddhist literature of the dead.

No one able to feel beauty could refuse to confess the charm of the old Buddhist cemeteries, — with their immemorial trees, their evergreen mazes of shrubbery trimmed into quaintest shapes, the carpet-softness of their mossed paths, the weird but unquestionable art of their monuments. And no great knowledge of Buddhism is

100 Exotics and Retrospectives

needed to enable you, even at first sight, to understand something of this art. You would recognize the lotos chiselled upon tombs or water-tanks, and would doubtless observe that the designs of the pedestals represent a lotos of eight petals, — though you might not know that these eight petals symbolize the Eight Intelligences. You would recognize the *manji*, or svastika, figuring the Wheel of the Law, — though ignorant of its relation to the Mahâyâna philosophy. You would perhaps be able to recognize also the images of certain Buddhas, — though not aware of the meaning of their attitudes or emblems in relation to mystical ecstasy or to the manifestation of the Six Supernatural Powers. And you would be touched by the simple pathos of the offerings, — the incense and the flowers before the tombs, the water poured out for the dead, — even though unable to divine the deeper pathos of the beliefs that make the cult. But unless an excellent Chinese scholar as well as a Buddhist philosopher, all book-knowledge of the great religion would still leave you helpless in a world of riddles. The marvellous texts, — the exquisite Chinese scriptures chiselled into the granite of tombs, or limned by a master-brush upon the

The Literature of the Dead 101

smooth wood of the *sotoba*, — will yield their secrets only to an interpreter of no common powers. And the more you become familiar with their aspect, the more the mystery of them tantalizes, — especially after you have learned that a literal translation of them would mean, in the majority of cases, exactly nothing !

What strange thoughts have been thus recorded and yet concealed ? Are they complex and subtle as the characters that stand for them ? Are they beautiful also like those characters, — with some undreamed-of, surprising beauty, such as might inform the language of another planet ?

II

As for subtlety and complexity, much of this mortuary literature is comparable to the Veil of Isis. Behind the mystery of the text — in which almost every character has two readings — there is the mystery of the phrase ; and again behind this are successions of riddles belonging to a gnosticism older than all the wisdom of the Occident, and deep as the abysses of Space. Fortunately the most occult texts are also the least

102 Exotics and Retrospectives

interesting, and bear little relation to the purpose of this essay. The majority are attached, not to the sculptured, but to the written and impermanent literature of cemeteries, — not to the stone monuments, but to the *sotoba*: those tall narrow laths of unpainted wood which are planted above the graves at fixed, but gradually increasing intervals, during a period of one hundred years.¹

The uselessness of any exact translation of these inscriptions may be exemplified by a word-for-word rendering of two sentences written upon the *sotoba* used by the older sects. What meaning can you find in such a term as “Law-sphere-substance-nature-wisdom,” or such an invocation as “Ether, Wind, Fire, Water, Earth!” — for an invocation it really is? To understand these

¹ The word “*sotoba*” is identical with the Sanscrit “*stûpa*.” Originally a mausoleum, and later a simple monument — commemorative or otherwise, — the *stûpa* was introduced with Buddhism into China, and thence, perhaps by way of Korea, into Japan. Chinese forms of the stone *stûpa* are to be found in many of the old Japanese temple-grounds. The wooden *sotoba* is only a symbol of the *stûpa*; and the more elaborate forms of it plainly suggest its history. The slight carving along its upper edges represents that superimposition of cube, sphere, crescent, pyramid, and body-pyriiform (symbolizing the Five Great Elements), which forms the design of the most beautiful funeral monuments.

SOTOBA IN KOBUDERA CEMETERY

(*The upper characters are "BONTI" — modified Sanskrit*)

The Literature of the Dead 103

words one must first know that, in the doctrine of the mystical sects, the universe is composed of Five Great Elements which are identical with Five Buddhas ; that each of the Five Buddhas contains the rest ; and that the Five are One by essence, though varying in their phenomenal manifestations. The name of an element has thus three significations. The word Fire, for example, means flame as objective appearance ; it means flame also as the manifestation of a particular Buddha ; and it likewise means the special quality of wisdom or power attributed to that Buddha. Perhaps this doctrine will be more easily understood by the help of the following Shingon classification of the Five Elements in their Buddhist relations : —

I. *Hō-kai-tai-sbō-chi*

(Sansk. Dhârma-dhātu-prakrit-gñâna), or “ Law-sphere-substance-nature-wisdom,” — signifying the wisdom that becomes the substance of things. This is the element Ether. Ether personified is Dai-Nichi-Nyōrai, the “ Great Sun-Buddha ” (Mahāvairokana Tathâgata), who “ holds the seal of Wisdom.”

II. *Dai-en-kyō-chi*

(Âdarsana-gñâna), or “ Great-round-mirror-wisdom,” — that is to say the divine power making images manifest. This is the element Earth. Earth personified is Ashuku Nyōrai, the “ Immovable Tathâgata ” (Akshobhya).

104 Exotics and Retrospectives

III. *Byō-dō-shō-chi*

(Samatā-gñāna), “Even-equal-nature-wisdom,” — that is, the wisdom making no distinction of persons or of things. The element Fire. Personified, Fire is Hō-shō Nyōrai, or “Gem-Birth” Buddha (Ratnasambhava Tathāgata), presiding over virtue and happiness.

IV. *Myō-kwan-χatsu-chi*

(Pratyavekshana-gñāna), “Wondrously-observing-considering-wisdom;” — that is, the wisdom distinguishing clearly truth from error, destroying doubts, and presiding over the preaching of the Law. The element Water. Water personified is Amida Nyōrai, the Buddha of Immeasurable Light (Amitābha Tathāgata).

V. *Jō-shō-sa-chi*

(Kṛtyānushthāna-gñāna), the “Wisdom-of-accomplishing-what-is-to-be-done;” — that is to say, the divine wisdom that helps beings to reach Nirvana. The element Air. Air personified is Fu-kū-jō-ju, the “Unfailing-of-Accomplishment,” — more commonly called Fuku-Nyōrai (Amoghasiddhi, or Sākyamuni).¹

Now the doctrine that each of the Five Buddhas contains the rest, and that all are essentially One,

¹ These relations of the elements to the Buddhas named are not, however, permanently fixed in the doctrine, — for obvious philosophical reasons. Sometimes Sakyamuni is identified with Ether, and Amitābha with Air, etc., etc. In the above enumeration I have followed the order taken by Professor Bunyiu Nanjio, who nevertheless suggests that this order is not to be considered perpetual.

The Literature of the Dead 105

is symbolized in these texts by an extraordinary use of characters called *Bon-ji*, — which are recognizably Sanscrit letters. The name of each element can be written with any one of four characters, — all having for Buddhists the same meaning, though differing as to sound and form. Thus the characters standing for Fire would read, according to Japanese pronunciation, *Ra*, *Ran*, *Raän*, and *Raku*; — and the characters signifying Ether, *Kya*, *Ken*, *Keën*, and *Kyaku*. By different combinations of the twenty characters making the five sets, different supernatural powers and different Buddhas are indicated; and the indication is further helped by an additional symbolic character, called *Shü-ji* or “seed-word,” placed immediately after the names of the elements. The reader will now comprehend the meaning of the invocatory “Ether, Wind, Fire, Water, Earth!” and of the strange names of divine wisdom written upon sotoba; but the enigmas offered by even a single sotoba may be much more complicated than the foregoing examples suggest. There are unimaginable acrostics; there are rules, varying according to sect, for the position of texts in relation to the points of the compass; and there are kabalisms

106 Exotics and Retrospectives

based upon the multiple values of certain Chinese ideographs. The whole subject of esoteric inscriptions would require volumes to explain; and the reader will not be sorry, I fancy, to abandon it at this point in favor of texts possessing a simpler and a more humane interest.

The really attractive part of Buddhist cemetery-literature mostly consists of sentences taken from the sūtras or the sastras; and the attraction is due not only to the intrinsic beauty of the faith which these sentences express, but also to the fact that they will be found to represent, in epitome, a complete body of Buddhist doctrine. Like the mystical inscriptions above-mentioned, they belong to the sotoba, not to the grave-stones; but, while the invocations usually occupy the upper and front part of the sotoba, these sutra-texts are commonly written upon the back. In addition to scriptural and invocatory texts, each sotoba bears the name of the giver, the kaimyō of the dead, and the name of a commemorative anniversary. Sometimes a brief prayer is also inscribed, or a statement of the pious purpose inspiring the erection of the sotoba. Before considering the scripture-texts proper, in relation to their embodiment of doctrine, I sub-

The Literature of the Dead 107

mit examples of the general character and plan of sotoba inscriptions. They are written upon both sides of the wood, be it observed ; but I have not thought it necessary to specify which texts belong to the front, and which to the back of the sotoba, — since the rules concerning such position differ according to sect : —

I. — SOTOBA OF THE NICHIREN SECT.

(Invocation.)

Ether, Wind, Fire, Water, Earth! — Hail to the Sutra of the Lotos of the Good Law!

(Commemorative text.)

To-day, the service of the third year has been performed in order that our lay-brother [*kaimyō*] may be enabled to cut off the bonds of illusion, to open the Eye of Enlightenment, to remain free from all pain, and to enter into bliss.

(Sastra text.)

MYŌ-HŌ-KYŌ-RIKI-SOKU-SHIN-JŌ-BUTSU !

Even this body [of flesh] by the virtue of the Sutra of the Excellent Law, enters into Buddhahood.

II. — SOTOBA OF THE NICHIREN SECT.

(Invocation.)

Hail to the Sutra of the Lotos of the Good Law!

108 Exotics and Retrospectives

(Commemorative text.)

The rite of feeding the hungry spirits having been fulfilled, and the service for the dead having been performed, this sotoba is set up in commemoration of the service and the offerings made with prayer for the salvation of Buddha on behalf of — (*kaimyō* follows).

(Prayer — with English translation.)

Gan i shi kudoku
Fu-gyū o issai
Gatō yo shujō
Kai-gu jō butsudo.

By virtue of this good action I beseech that the merit of it may be extended to all, and that we and all living beings may fulfil the Way of Buddha.¹

The fifth day of the seventh month of the thirtieth year of Meiji, by — — —, this sotoba has been set up.

III. — SOTOBA OF THE JŌDO SECT.

(Invocation.)

Hail to the Buddha Amida!

(Commemorative mention.)

This for the sake of — (*here kaimyō* follows).

¹ The above prayer is customarily said after having read a sūtra, or copied a sacred text, or caused a Buddhist service to be performed.

The Literature of the Dead 109

(Sutra text.)

The Buddha of the Golden Mouth, who possesses the Great-Round-Mirror-Wisdom,¹ has said: "The glorious light of Amida illuminates all the worlds of the Ten Directions, and takes into itself and never abandons all living beings who fix their thoughts upon that Buddha!"

IV. — SOTOBA OF THE ZEN SECT.

(Sastra text.)

The Dai-en-kyō-chi-kyō declares: — "By entering deeply into meditation, one may behold the Buddhas of the Ten Directions."

(Commemorative text.)

That the noble Elder Sister² Chi-Shō-In-Kō-Un-Tei-Myō,³ now dwelling in the House of Shining Wisdom, may instantly attain to Bodhi.⁴

¹ Dai-en-kyō-chi (Ādarsana-gñāna). Amida is the Japanese form of the name Amitābha.

² "Great (or Noble) Elder Sister" is the meaning of the title *dai-sbi* affixed to the *kaimyō* of a woman. In the rite of the Zen sect *dai-sbi* always signifies a married woman; *shin-nyo*, a maid.

³ This *kaimyō*, or posthumous name, literally signifies: Radiant-Chastity-Beaming-Through-Luminous-Clouds.

⁴ The Supreme Wisdom; the state of Buddhahood.

110 Exotics and Retrospectives

(Prayer.)

Let whomsoever looks upon this sotoba be forever delivered from the Three Evil Ways.¹

(Record.)

In the thirtieth year of Meiji, on the first day of the fifth month, by the house of Inouyé, this sotoba has been set up.

The foregoing will doubtless suffice as specimens of the ordinary forms of inscription. The Buddha praised or invoked is always the Buddha especially revered by the sect from whose sutra or sastra the quotation is chosen;—sometimes also the divine power of a Bodhisattva is extolled, as in the following Zen inscription:—

“The Sutra of Kwannon says:—‘In all the provinces of all the countries in the Ten Directions, there is not even one temple where Kwannon is not self-revealed.’”

Sometimes the scripture text more definitely assumes the character of a praise-offering, as the following juxtaposition suggests:—

¹ *San-Akudō*,—the three unhappy conditions of Hell, of the World of Hungry Spirits (*Pretas*), and of Animal Existence.

The Literature of the Dead 111

“The Buddha of Immeasurable Light illuminates all worlds in the Ten Directions of Space.”

This for the sake of the swift salvation into Buddhahood of our lay-brother named the Great-Secure-Retired-Scholar.

Sometimes we also find a verse of praise or an invocation addressed to the apotheosized spirit of the founder of the sect, — a common example being furnished by the sotoba of the Shingon rite: —

*“Hail to the Great Teacher Haijō-Kongō!”*¹

Rarely the little prayer for the salvation of the dead assumes, as in the following beautiful example, the language of unconscious poetry: —

*“This for the sake of our noble Elder Sister —. May the Lotos of Bliss by virtue of these prayers be made to bloom for her, and to bear the fruit of Buddhahood!”*²

But usually the prayers are of the simplest, and differ from each other only in the use of peculiar Buddhist terms: —

¹ “Haijō Kongō” means “the Diamond of Universal Enlightenment:” it is the honorific appellation of Kūkai or Kobodaishi, founder of the Shingon-Shū.

² From a Zen sotoba.

112 Exotics and Retrospectives

—“ This for the sake of the true happiness of our lay-brother — [*kaimyō*], — that he may obtain the Supreme Perfect Enlightenment.”

—“ This tower is set up for the sake of —, that he may obtain complete Sambodhi.”¹

—“ This precious tower and these offerings for the sake of — —, — that he may obtain the *Anattra-Sammyak-Sambodhi*.”²

One other subject of interest belonging to the merely commemorative texts of *sotoba* remains to be mentioned, — the names of certain Buddhist services for the dead. There are two classes of such services: those performed within one hundred days after death, and those celebrated at fixed intervals during a term of one hundred years, — on the 1st, 2d, 7th, 13th, 17th, 24th, 33d, 50th, and 100th anniversaries of the death. In the Zen rite these commemorative services — (perhaps we might call them masses) — have singular mystical names by which they are recorded upon the *sotoba* of the sect, — such

¹ In Japanese “*Sanbodai*.” The term “tower” refers of course to the *sotoba*, the symbol of a real tower, or at least of the desire to erect such a monument, were it possible.

² In Japanese, *Anuka-tara-sanmaku-sanbodai*, — the supreme form of Buddhist enlightenment.

The Literature of the Dead 113

as Lesser Happiness, Greater Happiness, Broad Repose, The Bright Caress, and The Great Caress.

But we shall now turn to the study of the scripture-texts proper, — those citations from sūtra or sastra which form the main portion of a sotoba-writing ; expounding the highest truth of Buddhist belief, or speaking the deepest thought of Eastern philosophy.

III

At the beginning of my studies in the Kobudera cemetery, I was not less impressed by the quiet cheerfulness of the sotoba-texts, than by their poetry and their philosophy. In none did I find even a shadow of sadness: the greater number were utterances of a faith that seemed to me wider and deeper than our own, — sublime proclamations of the eternal and infinite nature of Thought, the unity of all mind, and the certainty of universal salvation. And other surprises awaited me in this strange literature. Texts or fragments of texts, that at first rendering appeared of the simplest, would yield to learned

114 Exotics and Retrospectives

commentary profundities of significance absolutely startling. Phrases, seemingly artless, would suddenly reveal a dual suggestiveness, — a two-fold idealism, — a beauty at once exoteric and mystical. Of this latter variety of inscription the following is a good example: —

*“The flower having bloomed last night, the World has become fragrant.”*¹

In the language of the higher Buddhism, this means that through death a spirit has been released from the darkness of illusion, even as the perfume of a blossom is set free at the breaking of the bud, and that the divine Absolute, or World of Law, is refreshed by the new presence, as a whole garden might be made fragrant by the blooming of some precious growth. But in the popular language of Buddhism, the same words signify that in the Lotos-Lake of Paradise another magical flower has opened for the Apparitional Rebirth into highest bliss of the being loved and lost on earth, and that Heaven rejoices for the advent of another Buddha.

But I desire rather to represent the general result of my studies, than to point out the special

¹ From a sutra of the Jodo sect.

The Literature of the Dead 115

beauties of this epitaphic literature: and my purpose will be most easily attained by arranging and considering the inscriptions in a certain doctrinal order.

A great variety of sotoba-texts refer, directly or indirectly, to the Lotos-Flower Paradise of Amida, — or, as it is more often called, the Paradise of the West. The following are typical: —

*“The Amida-Kyō says: — ‘All who enter into that country enter likewise into that state of virtue from which there can be no turning back.’”*¹

*“The Text of Gold proclaims: — ‘In that world they receive bliss only: therefore that world is called Gokuraku, — exceeding bliss.’”*²

† From a sotoba of the Jōdo sect. The Amida-Kyō, or Sūtra of Amida, is the Japanese [Chinese] version of the smaller Sukhāvati-Vyūha Sūtra.

² *Gokuraku* is the common word in Japan for the Buddhist heaven. The above inscription, translated for me from a sotoba of the Jōdo sect, is an abbreviated form of a verse in the Smaller Sukhāvati-Vyūha (see *Buddhist Mahāyāna Texts: “Sacred Books of the East”*), which Max Müller has thus rendered in full: — “In that world Sukhāvati, O Sāriputra, there is neither bodily nor mental pain for living beings. The sources of happiness are innumerable there. For that reason is that world called Sukhāvati, the happy.”

116 Exotics and Retrospectives

*“Hail unto the Lord Amida Buddha! The Golden Mouth has said, — ‘All living beings that fix their thoughts upon the Buddha shall be received and welcomed into his Paradise; — never shall they be forsaken.’”*¹

But texts like these, though dear to popular faith, make no appeal to the higher Buddhism, which admits heaven as a temporary condition only, not to be desired by the wise. Indeed, the Mahâyâna texts, describing Sukhâvatî, themselves suggest its essentially illusive character, — a world of jewel-lakes and perfumed airs and magical birds, but a world also in which the voices of winds and waters and singers perpetually preach the unreality of self and the impermanency of all things. And even the existence of this Western Paradise might seem to be denied in other sotoba-texts of deeper significance, — such as this: —

*“Originally there is no East or West: where then can South or North be?”*²

“Originally,” — that is to say, in relation to the Infinite. The relations and the ideas of the Conditioned cease to exist for the Unconditioned. Yet

¹ From a sotoba of the Jōdo sect.

² Sotoba of the Jōdo sect.

The Literature of the Dead 117

this truth does not really imply denial of other worlds of relation,—states of bliss to which the strong may rise, and states of pain to which the weak may descend. It is a reminder only. All conditions are impermanent, and so, in the profounder sense, unreal. The Absolute,—the Supreme Buddha,—is the sole Reality. This doctrine appears in many sotoba-inscriptions:—

*“The Blue Mountain of itself remains eternally unmoved: the White Clouds come of themselves and go.”*¹

By “the Blue Mountain” is meant the Sole Reality of Mind;—by “the White Clouds,” the phenomenal universe. Yet the universe exists but as a dream of Mind:—

*“If any one desire to obtain full knowledge of all the Buddhas of the past, the present, and the future, let him learn to comprehend the true nature of the World of Law. Then will he perceive that all things are but the production of Mind.”*²

“By the learning and the practice of the True

¹ Sotoba of the Jōdo sect.

² Sotoba of the Zen sect.

118 Exotics and Retrospectives

Doctrine, the Non-Apparent becomes [for us] the only Reality.”¹

The universe is a phantom, and a phantom likewise the body of man, together with all emotions, ideas, and memories that make up the complex of his sensuous Self. But is this evanescent Self the whole of man's inner being? Not so, proclaim the sotoba :—

“ All living beings have the nature of Buddha. The Nyōrai,² eternally living, is alone unchangeable.”³

“ The Kegon-Kyō⁴ declares :— ‘ In all living creatures there exists, and has existed from the beginning, the Real-Law Nature : all by their nature contain the original essence of Buddha.’ ”

Sharing the nature of the Unchangeable, we share the Eternal Reality. In the highest sense, man also is divine :—

“ The Mind becomes Buddha : the Mind itself is Buddha.”⁵

¹ Sotoba of the Zen sect.

² Tathāgata.

³ From a sotoba of the Zen sect.

⁴ Avatamsaka Sūtra. — This text is also from a Zen sotoba.

⁵ From a tombstone of the Jōdo sect. The text is evidently from the Chinese version of the Amitāyur-Dhy-

The Literature of the Dead 119

“In the Engaku-Kyō¹ it is written: ‘Now for the first time I perceive that all living beings have the original Buddha-nature, — wherefore Birth and Death and Nirvana have become for me as a dream of the night that is gone.’”

Yet what of the Buddhas who successively melt into Nirvana, and nevertheless “return in their order”? Are they, too, phantoms? — is their individuality also unreal? Probably the question admits of many different answers, — since there is a Buddhist Realism as well as a Buddhist Idealism; but, for present purposes, the following famous text is a sufficient reply: —

NAMU ITSU SHIN SAN-ZÉ SHŌ BUTSU!

“Hail to all the Buddhas of the Three Existences,² who are but one in the One Mind!”³

āna-Sūtra (see *Buddhist Mahāyāna Texts*: “Sacred Books of the East”). It reads in the English version thus: — “In fine, it is your mind that becomes Buddha; — nay, it is your mind that is indeed Buddha.”

¹ Pratyeka-Buddha sastra? — From a sotoba of the Zen sect.

² *San-zé*, or *mitsu-yo*, — the Past, Present, and Future.

³ “Mind” is here expressed by the character *shin* or *kokoro*. — The text is from a Zen sotoba, but is used also, I am told, by the mystical sects of Tendai and Shingon.

120 Exotics and Retrospectives

In relation to the Absolute, no difference exists even between gods and men: —

“The Golden Verse of the Jō-sho-sa-chi¹ says: — ‘This doctrine is equal and alike for all; there is neither superior nor inferior, neither above nor below.’”

Nay, according to a still more celebrated text, there is not even any difference of personality: —

JI TA HŌ KAI BYŌ DŌ RI YAKU.

“The ‘I’ and the ‘Not-I’ are not different in the World of Law: both are favored alike.”²

And a still more wonderful text — (to my thinking, the most remarkable of all Buddhist texts) — declares that the world itself, phantom though it be, is yet not different from Mind: —

SŌ MOKU KOKU DŌ SHITSU KAI JŌ BUTSU.

“Grass, trees, countries, the earth itself, — all these shall enter wholly into Buddhahood.”³

¹ Kṛityānushthāna-gñāna. — The text is from a sotoba of the Shingon sect.

² More literally, “Self and Other:” i. e., the Ego and the Non-Ego in the meaning of “I” and “Thou.” There is no “I” and “Thou” in Buddhahood. — This text was copied from a Zen sotoba.

³ From a Zen sotoba.

The Literature of the Dead 121

Literally, "shall become Buddha;" that is, they shall enter into Buddhahood or Nirvana. All that we term matter will be transmuted, therefore into Mind,—Mind with the attributes of Infinite Sentiency, Infinite Vision, and Infinite Knowledge. As phenomenon, matter is unreal; but transcendently it belongs by its ultimate nature to the Sole Reality.

Such a philosophical position is likely to puzzle the average reader. To call matter and mind but two aspects of the Ultimate Reality will not seem irrational to students of Herbert Spencer. But to say that matter is a phenomenon, an illusion, a dream, explains nothing;—as phenomenon it exists, and having a destiny attributed to it, must be considered objectively. Equally unsatisfying is the statement that phenomena are aggregates of Karma. What is the nature of the particles of the aggregate? Or, in plainest language, what is the illusion made of?

Not in the original Buddhist scriptures, and still less in the literature of Buddhist cemeteries, need the reply be sought. Such questions are dealt with in the sastras rather than in the sūtras;—also in various Japanese commentaries upon both. A friend has furnished me with some

122 Exotics and Retrospectives

very curious and unfamiliar Shingon texts containing answers to the enigma.

The Shingon sect, I may observe, is a mystical sect, which especially proclaims the identity of mind and substance, and boldly carries out the doctrine to its furthest logical consequences. Its founder and father Kū-kai, better known as Kōbō-daishi, declared in his book *Hiṣōki* that matter is not different in essence from spirit. "As to the doctrine of grass, trees, and things non-sentient becoming Buddhas" he writes, "I say that the refined forms [*ultimate nature*] of spiritual bodies consist of the Five Great Elements; that Ether¹ consists of the Five Great Elements; and that the refined forms of bodies spiritual, of ether, of plants, of trees, consequently pervade all space. This ether, these plants and trees, are themselves spiritual bodies. To the eye of flesh, plants and trees appear to be gross matter. But to the eye

¹ The Chinese word literally means "void," — as in the expression "Void Supreme," to signify the state of Nirvana. But the philosophical reference here is to the ultimate substance, or primary matter; and the rendering of the term by "Ether" (rather in the Greek than the modern sense, of course) has the sanction of Bunyiu Nanjio, and the approval of other eminent Sanscrit and Chinese scholars.

The Literature of the Dead 123

of the Buddha *they are composed of minute spiritual entities*. Therefore, even without any change in their substance, there can be no error or impropriety in our calling them Buddhas."

The use of the term "non-sentient" in the foregoing would seem to involve a contradiction; but this is explained away by a dialogue in the book *Shi-man-gi* : —

Q. — Are not grass and trees sometimes called sentient ?

A. — They can be so called.

Q. — But they have also been called non-sentient : how can they be called sentient ?

A. — In all substance from the beginning exists the impress of the wisdom-nature of the Nyōrai (*Tathāgata*) : therefore to call such things sentient is not error.

"Potentially sentient," the reader might conclude; but this conclusion would be wrong. The Shingon thought is not of a potential sentiency, but of a latent sentiency which although to us non-apparent and non-imaginable, is nevertheless both real and actual. Commenting upon the words of Kōbōdaishi above cited, the great priest Yū-kai not only reiterates the opinion of his master, but asserts that it is absurd to deny that plants, trees, and what we call inanimate objects, can practise virtue ! "Since Mind," he declares,

124 Exotics and Retrospectives

“ pervades the whole World of Law, the grasses, plants, trees, and earth pervaded by it must all have mind, and must turn their mind to Buddhahood and practise virtue. Do not doubt the doctrine of our sect, regarding the Non-Duality of the Pervading and the Pervaded, merely because of the distinction made in common parlance between Matter and Mind.” As for *how* plants or stones can practise virtue, the sūtras indeed have nothing to say. But that is because the sūtras, being intended for man, teach only what man should know and do.

The reader will now, perhaps, be better able to follow out the really startling Buddhist hypothesis of the nature of matter to its more than startling conclusion. (It must not be contemned because of the fantasy of five elements; for these are declared to be only modes of one ultimate.) All forms of what we call matter are really but aggregates of spiritual units; and all apparent differences of substance represent only differences of combination among these units. The differences of combination are caused by special tendencies and affinities of the units; — the tendency of each being the necessary result of its particular evolutionary history — (using the term “ evolu-

The Literature of the Dead 125

tional" in a purely ethical sense). All integrations of apparent substance, — the million suns and planets of the universe, — represent only the affinities of such ghostly ultimates; and every human act or thought registers itself through enormous time by some knitting or loosening of forces working for good or evil.

Grass, trees, earth, and all things seem to us what they are not, simply because the eye of flesh is blind. Life itself is a curtain hiding reality, — somewhat as the vast veil of day conceals from our sight the countless orbs of Space. But the texts of the cemeteries proclaim that the purified mind, even while prisoned within the body, may enter for moments of ecstasy into union with the Supreme : —

*“The One Bright Moon illuminates the mind in the meditation called Zenjō.”*¹

The “One Bright Moon” is the Supreme Buddha. By the pure of heart He may even be seen : —

¹ Literally, “illuminates the Zenjō-mind.” Zenjō is the Sanscrit *Dhyāna*. It is believed that in real *Dhyāna* the mind can hold communication with the Absolute. — From a sutra of the Zen sect.

126 Exotics and Retrospectives

*“Hail unto the Wondrous Law! By attaining to the state of single-mindedness we behold the Buddha.”*¹

Greater delight there is none : —

*“Incomparable the face of the Nyōrai, — surpassing all beauty in this world!”*²

But to see the face of one Buddha is to see all : —

“The Dai-en-kyō-chi-kyō³ says : — ‘By entering deeply into the meditation Zenjō, one may see all the Buddhas of the Ten Directions of Space.’”

*“The Golden Mouth has said : — ‘He whose mind can discern the being of one Buddha, may easily behold three, four, five Buddhas, — nay, all the Buddhas of the Three Existences.’”*⁴

Which mystery is thus explained : —

¹ From a sotoba of the Tendai sect.

² From a Jōdo sotoba.

³ Literally, “the Great-Round-Mirror-Wisdom-Sūtra.” Sansc., *Adarsana-gñāna*. — From a Zen sotoba.

⁴ Sotoba of the Zen sect.

The Literature of the Dead 127

"The Myō-kwan-satsu-chi-kyō¹ has said: — The mind that detaches itself from all things becomes the very mind of Buddha."²

Visitors to the older Buddhist temples of Japan can scarcely fail to notice the remarkable character of the gilded aureoles attached to certain images. These aureoles, representing circles, disks, or ovals of glory, contain numbers of little niches shaped like archings or whirls of fire, each enshrining a Buddha or a Bodhisattva. A verse of the Amitâyur-Dhyâna Sûtra might have suggested this symbolism to the Japanese sculptors: — "*In the halo of that Buddha there are Buddhas innumerable as the sands of the Ganga.*"³ Icon and verse alike express that doctrine of the One in Many suggested by the foregoing sotoba-texts; and the assurance that he who sees one Buddha can see all, may further be accepted as signifying that he who perceives one great truth fully, will be able to perceive countless truths.

But even to the spiritually blind the light must come at last. A host of cemetery texts proclaim

¹ *Pratyavekshana-gñâna.*

² From a Zen sotoba.

³ *Buddhist Mahâyâna Texts: "Sacred Books of the East,"* vol. xlix. p. 180.

128 Exotics and Retrospectives

the Infinite Love that watches all, and the certainty of ultimate and universal salvation : —

*“ Possessing all the Virtues and all the Powers, the Eyes of the Infinite Compassion behold all living creatures.”*¹

“ The Kongō-takara-tō-mei² proclaims : — ‘ All living beings in the Six States of Existence³ shall be delivered from the bonds of attachment ; their minds and their bodies alike shall be freed from desire ; and they shall obtain the Supreme Enlightenment.’ ”

*“ The Sūtra says : — ‘ Changing the hearts of all beings, I cause them to enter upon the Way of Buddhahood.’ ”*⁴

Yet the supreme conquest can be achieved only by self-effort : —

“ Through the destruction of the Three Poisons⁵

¹ From a sotoba of the Zen sect.

² Lit. : “ the Inscription of the Tower of Diamond,” — name of a Buddhist text.

³ The Six States of Existence are Heaven, Man, Demons, Hell, Hungry Spirits (*Pretas*), and Animals. — The above is from a Zen sotoba.

⁴ Sotoba of the Nichiren sect.

⁵ *San-doku* or *Mitsu-no-doku*, viz. : — Anger, Ignorance, and Desire. — From a Zen sotoba.

The Literature of the Dead 129

one may rise above the Three States of Existence."

The Three Existences signify time past, present, and future. To rise above— (more literally, to "emerge from") —the Three Existences means therefore to pass beyond Space and Time, —to become one with the Infinite. The conquest of Time is indeed possible only for a Buddha; but all shall become Buddhas. Even a woman, while yet a woman, may reach Buddhahood, as this Nichiren text bears witness, inscribed above the grave of a girl: —

KAI YO KEN PI RYŌ-NYŌ JŌ BUTSU.

"All beheld from afar the Dragon Maiden become a Buddha."

The reference is to the beautiful legend of Sâgara, the daughter of the Nâga-king, in the *Myō-hō-rengé-kyō*.¹

¹ Japanese title of the Saddhârma-Pundarika Sûtra. See, for legend, chap. xi. of Kern's translation in the *Sacred Books of the East* series.

IV

Though not representing, nor even suggesting, the whole range of sotoba-literature, the foregoing texts will sufficiently indicate the quality of its philosophical interest. The inscriptions of the *baka*, or tombs, have another kind of interest; but before treating of these, a few words should be said about the tombs themselves. I cannot attempt detail, because any description of the various styles of such monuments would require a large and profusely illustrated volume; while the study of their sculptures belongs to the enormous subject of Buddhist iconography, — foreign to the purpose of this essay.

There are hundreds, — probably thousands, — of different forms of Buddhist funeral monuments, — ranging from the unhewn boulder, with a few ideographs scratched on it, of the poorest village-graveyard, to the complicated turret (*kagé-kio*) enclosing a shrine with images, and surmounted with a spire of umbrella-shaped disks or parasols (Sanskrit: *tchâtras*), — possibly representing the old Chinese stûpa. The most common class of *baka* are plain. A large number of the

The Literature of the Dead 131

better class have lotos-designs chiselled upon some part of them: — either the pedestal is sculptured so as to represent lotos-petals; or a single blossom is cut in relief or intaglio on the face of the tablet; or — (but this is rare) — a whole lotos-plant, leaves and flowers, is designed in relief upon one or two sides of the monument. In the costly class of tombs symbolizing the Five Buddhist Elements, the eight-petalled lotos-symbol may be found repeated, with decorative variations, upon three or four portions of their elaborate structure. Occasionally we find beautiful reliefs upon tombstones, — images of Buddhas or Bodhisattvas; and not unfrequently a statue of Jizō may be seen erected beside a grave. But the sculptures of this class are mostly old; — the finest pieces in the Kobudera cemetery, for example, were executed between two and three hundred years ago. Finally I may observe that the family crest or *mon* of the dead is cut upon the front of the tomb, and sometimes also upon the little stone tank set before it.

The inscriptions very seldom include any texts from the holy books. On the front of the monument, below the chiselled crest, the *kaimyō* is

132 Exotics and Retrospectives

graven, together, perhaps, with a single mystical character — Sanscrit or Chinese ; on the left side is usually placed the record of the date of death ; and on the right, the name of the person or family erecting the tomb. Such is now, at least, the ordinary arrangement ; but there are numerous exceptions ; and as the characters are most often disposed in vertical columns, it is quite easy to put all the inscriptions upon the face of a very narrow monument. Occasionally the real name is also cut upon some part of the stone, — together, perhaps, with some brief record of the memorable actions of the dead. Excepting the *kaimyō*, and the sect-invocation often accompanying it, the inscriptions upon the ordinary class of tombs are secular in character ; and the real interest of such epigraphy is limited to the *kaimyō*. By *kai-myō* (*sīla*-name) is meant the Buddhist name given to the spirit of the dead, according to the custom of all sects except the *Ikkō* or *Shinshū*. In a special sense the term *kai*, or *sīla*, refers to precepts of conduct ¹ ; in a general sense it might

¹ There is a great variety of *sīla* ; — five, eight, and ten for different classes of laity ; two hundred and fifty for priests ; — five hundred for nuns, etc., etc.— Be it here observed that the posthumous Buddhist name given to the dead must not be studied as referring always to conduct in this world,

The Literature of the Dead 133

be rendered as "salvation by works." But the Shinshū allows no *kai* to any mortal; it does not admit the doctrine of immediate salvation by works, but only by faith in Amida; and the posthumous appellations which it bestows are therefore called not *kai-myō*, but *hō-myō*, or "Law-names."

Before Meiji the social rank occupied by any one during life was suggested by the *kaimyō*. The use, with a *kaimyō*, of the two characters reading *in den*, and signifying "temple-dweller," or "mansion-dweller," — or of the more common single character *in*, signifying "temple" or "mansion," was a privilege reserved to the nobility and gentry. Class-distinctions were further indicated by suffixes. *Koji*, — a term partly corresponding to our "lay-brother," — and *Daishi*, "great elder-sister," were honorifically attached to the *kaimyō* of the samurai and the aristocracy; while the simpler appellations of *Shinshi* and *Shinnyo*, respectively signifying "faithful [believing] man," "faithful woman," followed the but rather as referring to *sīla* in another world. The *kaimyō* is thus a title of spiritual initiation.— Some Japanese Buddhist sects hold what are called *Ju-Kai-E* ("sīla-giving assemblies"), at which the initiated are given *kaimyō* of another sort, — *sīla*-names of admission as neophytes.

134 Exotics and Retrospectives

kaimyō of the humble. These forms are still used ; but the distinctions they once maintained have mostly passed away, and the privilege of the knightly “*in den*,” and its accompaniments, is free to any one willing to pay for it. At all times the words *Dōji* and *Dōnyo* seem to have been attached to the kaimyō of children. *Dō*, alone, means a lad, but when combined with *ji* or *nyo* it means “child” in the adjectival sense ; — so that we may render *Dōji* as “Child-son,” and *Dōnyo* as “Child-daughter.” Children are thus called who die before reaching their fifteenth year, — the majority-year by the old samurai code ; a lad of fifteen being deemed fit for war-service. In the case of children who die within a year after birth, the terms *Gaini* and *Gainyo* occasionally replace *Dōji* and *Dōnyo*. The syllable *Gai* here represents a Chinese character meaning “suckling.”

Different Buddhists sects have different formulas for the composition of the kaimyō and its addenda ; — but this subject would require a whole special treatise ; and I shall mention only a few sectarian customs. The Shingon sect sometimes put a Sanscrit character — the symbol of a Buddha — before their kaimyō ; — the Shin

The Literature of the Dead 135

head theirs with an abbreviation of the holy name Sakyamuni;—the Nichiren often preface their inscriptions with the famous invocation, *Namu myō hō rengé kyō* (“Hail to the Sutra of the Lotus of the Good Law!”),—sometimes followed by the words *Senzo daidai* (“forefathers of the generations”);—the Jōdo, like the Ikkō, use an abbreviation of the name Sakyamuni, or, occasionally, the invocation *Namu Amida Butsu!*—and they compose their four-character kaimyō with the aid of two ideographs signifying “honour” or “fame;”—the Zen sect contrive that the first and the last character of the kaimyō, when read together, shall form a particular Buddhist term, or mystical phrase,—except when the kaimyō consists of only two characters.

Probably the word “mansion” in kaimyō-inscriptions would suggest to most Western readers the idea of heavenly mansions. But the fancy would be at fault. The word has no celestial signification; yet the history of its epitaphic use is curious enough. Anciently, at the death of any illustrious man, a temple was erected for the special services due to his spirit, and also for the conservation of relics or memorials of him. Con-

136 Exotics and Retrospectives

fucianism introduced into Japan the *ibai*, or mortuary tablet, called by the Chinese *shin-shu*; ¹ and a portion of the temple was set apart to serve as a chapel for the *ibai*, and the ancestral cult. Any such memorial temple was called *in*, or "mansion," — doubtless because the august spirit was believed to occupy it at certain periods; — and the term yet survives in the names of many celebrated Buddhist temples, — such as the Chion-In, of Kyōtō. With the passing of time, this custom was necessarily modified; for as privileges were extended and aristocracies multiplied, the erection of a separate temple to each notable presently became impossible. Buddhism met the difficulty by conferring upon every individual of distinction the posthumous title of *in-den*, — and affixing to this title the name of an imaginary temple or "mansion." So to-day, in the vast majority of *kaimyō*, the character *in* refers only to the temple that would have been built had circumstance permitted, but now exists only in the pious desire of those who love and reverence the departed.

Nevertheless the poetry of these *in*-names does

¹ That is, according to the Japanese reading of the Chinese characters.

TOMB IN KOBUDERA CEMETERY

(The relief represents Seishi Bosatsu — Bodhisattva Mahāsthāma — in meditation. It is 187 years old. The white patches on the surface are lichen growths)

The Literature of the Dead 137

possess some real meaning. They are nearly all of them names such as would be given to real Buddhist temples, — names of virtues and sanctities and meditations, — names of ecstasies and powers and splendors and luminous immeasurable unfoldings, — names of all ways and means of escape from the Six States of Existence and the sorrow of “peopling the cemeteries again and again.”

The general character and arrangement of *kaimyō* can best be understood by the aid of a few typical specimens. The first example is from a beautiful tomb in the cemetery of Kobudera, which is sculptured with a relief representing the Bodhisattva Mahāsthāma (Seishi Bosatsu) meditating. All the text in this instance has been cut upon the face of the monument, to left and right of the icon. Transliterated into Romaji it reads thus : —

(*Kaimyō.*)

Tei-Shō-In, HŌ-SŌ MYŌ-SHIN, Daishi.

(*Record.*)

—Shōtoku Ni, Jin shin Shimotsuki, jiu-ku nichī.

138 Exotics and Retrospectives

[Translation : —

— *Great Elder-Sister*, WONDERFUL-REALITY-
APPEARING-AT-THE-WINDOW-OF-LAW, *dwelling*
in the Mansion of the Pine of Chastity.

— The nineteenth day of the Month of Frost,¹ second year of Shōtoku,²—the year being under the Dragon of Elder Water.]

For the sake of clearness, I have printed the posthumous name proper (*Hō-sō Myō-shin*) in small capitals, and the rest in italics. The first three characters of the inscription, — *Tei-Shō-In*, — form the name of the temple, or “mansion.” The pine, both in religious and secular poetry, is a symbol of changeless conditions of good, because it remains freshly-green in all seasons. The use of the term “Reality” in the *kaimyō* indicates the state of unity with the Absolute ; — by “Window-of-Law” (Law here signifying the Buddha-state) must be understood that exercise of virtue through which even in this existence some percep-

¹ By the old calendar, the eleventh month was the Month of Frost.

² The second year of the period Shōtoku corresponds to 1712 A. D. — (For the meaning of the phrase “Dragon of Elder Water” the reader will do well to consult Professor Rein’s *Japan*, pp. 434–436.)

The Literature of the Dead 139

tion of Infinite Truth may be obtained. I have already explained the final word, *Daishi* ("great elder-sister").

Less mystical, but not less beautiful, is this Nichiren kaimyō sculptured upon the grave of a young samurai:—

Ko-shin In, Ken-dō Nichi-ki, Koji.

[*Koji*,—

Bright-Sun-on-the-Way-of-the-Wise, in the Mansion of Luminous Mind.]¹

On the same stone is carven the kaimyō of the wife:—

Shin-kyō In, Myō-en Nichi-ko, Daishi.

[*Daishi*,—

Spherically-Wondrous-Sunbeam, in the Mansion of the Mirror of the Heart.]

Perhaps the reader will now be able to find interest in the following selection of kaimyō, translated for me by Japanese scholars. The inscriptions are of various rites and epochs; but I have arranged them only by class and sex:—

¹ This beautiful kaimyō is identical with that placed upon the monument of my dear friend Nishida, buried in the Nichiren cemetery of Chōmanji, in Matsué.

After having studied the *sotoba*-texts previously cited, the reader should be able to divine the meaning of most of the *kaimyō* above given. At all events he will understand such frequently-

“child-daughter.” Perhaps the *dai* here would be better rendered by “grand” than by “great.” Notice that the term “August” precedes the mansion-name in this case also. The date of death is given as “the sixth year of Hōreki” (1756).

The Literature of the Dead 147

repeated terms as "Moon," "Lotos," "Law." But he may be puzzled by other expressions ; and some further explanation will, perhaps, not be unwelcome.

Besides expressing a pious hope for the higher happiness of the departed, or uttering some assurance of special conditions in the spiritual world, a great number of *kaimyō* also refer, directly or indirectly, to the character of the vanished personality. Thus a man of widely-recognized integrity and strong moral purpose, may — like my dead friend — be not unfitly named : "Bright-Sun-on-the-Way-of-the-Wise." The child-daughter or the young wife, especially remembered for sweetness of character, may be commemorated by some such posthumous name as "Plumflower-Light," or "Luminous-Shadow-of-the-Plumflower-Chamber ;"—the word "plumflower" in either case at once suggesting the quality of the virtue of the dead, because this blossom in Japan is the emblem of feminine moral charm, — more particularly faithfulness to duty and faultless modesty. Again, the memory of any person noted for deeds of charity may be honoured by such a *kaimyō* as, "Effective-Benevolence Listening-with-Pure-Heart-to-the-

148 Exotics and Retrospectives

Supplications - of - the - Poor.” Finally I may observe that the kaimyō-terms expressing altitude, luminosity, and fragrance, have most often a moral-exemplary signification. But in all countries epitaphic literature has its conventional hypocrisies or extravagances. Buddhist kaimyō frequently contain a great deal of religious flattery; and beautiful posthumous names are often given to those whose lives were the reverse of beautiful.

When we find among feminine kaimyō such appellations as “Wondrous-Lotos,” or “Beautiful-as-the-Lotos-of-the-Dawn,” we may be sure in the generality of cases that the charm, to which reference is so made, was ethical only. Yet there are exceptions; and the more remarkable of these are furnished by the kaimyō of children. Names like “Dream-of-Spring,” “Radiant-Phantasm,” “Snowy-Bubble,” do actually refer to the lost form,—or at least to the supposed parental idea of vanished beauty and grace. But such names also exemplify a peculiar consolatory application of the Buddhist doctrine of Impermanency. We might say that through the medium of these kaimyō the bereaved are thus soothed in the loftiest language of faith:—“Beautiful and brief

The Literature of the Dead 149

was the being of your child, — a dream of spring, a radiant passing vision, — a snowy bubble. But in the order of eternal law all forms must pass; material permanency there is none: only the divine Absolute dwelling in every being, — only the Buddha in the heart of each of us, — forever endures. Be this great truth at once your comfort and your hope!”

Extraordinary examples of the retrospective significance sometimes given to posthumous names, are furnished by the *kaimyō* of the Forty-Seven Rōnin buried at Sengakuji in Tōkyō. (Their story is now well-known to all the English-reading world through Mitford's eloquent and sympathetic version of it in the "Tales of Old Japan.") The noteworthy peculiarity of these *kaimyō* is that each contains the two words, "dagger" and "sword," — used in a symbolic sense, but having also an appropriate military suggestiveness. Ōishi Kuranosuké Yoshiwo, the leader, is alone styled *Koji*; — the *kaimyō* of his followers have the humbler suffix *Shinshi*. Ōishi's *kaimyō* reads: — "*Dagger-of-Emptiness-and-stainless-Sword, in the Mansion of Earnest Loyalty.*" I need scarcely call atten-

150 Exotics and Retrospectives

tion to the historic meaning of the mansion-name. Three of the kaimyō of his followers will serve as examples of the rest. That of Masé Kyudayu Masaake is : — “ *Dagger-of-Fame-and-Sword-of-the-Way [or Doctrine.]* ” The kaimyō of Ōishi Sezayémon Nobukiyo is : — “ *Dagger-of-Magnanimity - and - Sword - of - Virtue.* ” And the kaimyō of Horibei Yasubei is : — “ *Dagger-of-Cloud-and Sword-of-Brightness.* ”

The first and the last of these four kaimyō will be found obscure ; and several more of the forty-seven inscriptions are equally enigmatic at first sight. Usually in a kaimyō the word “ Emptiness,” or “ Void,” signifies the Buddhist state of absolute spiritual purity, — the state of Unconditioned Being. But in the kaimyō of Ōishi Kuranosuké the meaning of it, though purely Buddhist, is very different. By “ emptiness ” here, we must understand “ illusion,” “ unreality,” — and the full meaning of the phrase “ dagger-emptiness ” is : — “ *Wisdom that, seeing the emptiness of material forms, pierces through illusion as a dagger.* ” In Horibei Yasubei’s kaimyō we must similarly render the word “ cloud ” by illusion ; and “ Dagger-of-Cloud ” should be interpreted, “ *Illusion-penetrating Dagger of Wis-*

The Literature of the Dead 151

dom.” The wisdom that perceives the emptiness of phenomena, is the sharply-dividing, or distinguishing wisdom, — is *Myō-kwan-χatsu-chi* (Pratyavekshana-gñāna).

V

Possibly I have presumed too much upon the patience of my readers ; yet I feel that these studies can yield scarcely more than the glimpse of a subject wide and deep as a sea. If they should arouse any Western interest in the philosophy and the poetry of Buddhist epitaphic literature, then they will certainly have accomplished all that I could reasonably hope.

Not improbably I shall be accused, as I have been on other occasions, of trying to make Buddhist texts “ more beautiful than they are.” This charge usually comes from persons totally ignorant of the originals, and betrays a spirit of disingenuousness with which I have no sympathy. Whoever confesses religion to have been a developing influence in the social and moral history of races, — whoever grants that respect is due to

152 Exotics and Retrospectives

convictions which have shaped the nobler courses of human conduct for thousands of years, — whoever acknowledges that in any great religion something of eternal truth must exist, — will hold it the highest duty of a translator to interpret the concepts of an alien faith as generously as he would wish his own thoughts or words interpreted by his fellow-men. In the rendering of Chinese sentences this duty presents itself under a peculiar aspect. Any attempt at literal translation would result in the production either of nonsense, or of a succession of ideas totally foreign to far-Eastern thought. The paramount necessity in treating such texts is to discover and to expound the thought conveyed to Oriental minds by the original ideographs, — which are very different things indeed from “written words.” The translations given in this essay were made by Japanese scholars, and, in their present form, have the approval of competent critics.

As I write these lines a full moon looks into my study over the trees of the temple-garden, and brings me the recollection of a little Buddhist poem : —

The Literature of the Dead 153

“From the foot of the mountain, many are the paths ascending in shadow; but from the cloudless summit all who climb behold the self-same Moon.”

The reader who knows the truth shrined in this little verse will not regret an hour passed with me among the tombs of Kobudera.

Frogs

Frogs

“With hands resting upon the floor, reverentially you repeat your poem, O frog !”

Ancient Poem.

I

FEW of the simpler sense-impressions of travel remain more intimately and vividly associated with the memory of a strange land than sounds, — sounds of the open country. Only the traveller knows how Nature's voices — voices of forest and river and plain — vary according to zone ; and it is nearly always some local peculiarity of their tone or character that appeals to feeling and penetrates into memory, — giving us the sensation of the foreign and the far-away. In Japan this sensation is especially aroused by the music of insects, — hemiptera uttering a sound-language wonderfully different from that of their Western congeners. To a lesser degree the exotic accent is noticeable also in the chanting of Japanese frogs, — though the sound impresses itself upon remembrance rather

158 Exotics and Retrospectives

by reason of its ubiquity. Rice being cultivated all over the country, — not only upon mountain-slopes and hill-tops, but even within the limits of the cities, — there are flushed levels everywhere, and everywhere frogs. No one who has travelled in Japan will forget the clamor of the ricefields.

Hushed only during the later autumn and brief winter, with the first wakening of spring waken all the voices of the marsh-lands, — the infinite bubbling chorus that might be taken for the speech of the quickening soil itself. And the universal mystery of life seems to thrill with a peculiar melancholy in that vast utterance — heard through forgotten thousands of years by forgotten generations of toilers, but doubtless older by myriad ages than the race of man.

Now this song of solitude has been for centuries a favorite theme with Japanese poets; but the Western reader may be surprised to learn that it has appealed to them rather as a pleasant sound than as a nature-manifestation.

Innumerable poems have been written about the singing of frogs; but a large proportion of them would prove unintelligible if understood as referring to common frogs. When the general

chorus of the ricefield finds praise in Japanese verse, the poet expresses his pleasure only in the great volume of sound produced by the blending of millions of little croakings, — a blending which really has a pleasant effect, well compared to the lulling sound of the falling of rain. But when the poet pronounces an individual frog-call melodious, he is not speaking of the common frog of the ricefields. Although most kinds of Japanese frogs are croakers, there is one remarkable exception — (not to mention tree-frogs), — the *kajika*, or true singing-frog of Japan. To say that it croaks would be an injustice to its note, which is sweet as the chirrup of a song-bird. It used to be called *kawazu*; but as this ancient appellation latterly became confounded in common parlance with *kaeru*, the general name for ordinary frogs, it is now called only *kajika*. The *kajika* is kept as a domestic pet, and is sold in Tōkyō by several insect-merchants. It is housed in a peculiar cage, the lower part of which is a basin containing sand and pebbles, fresh water and small plants; the upper part being a framework of fine wire-gauze. Sometimes the basin is fitted up as a *ko-niwa*, or model landscape-garden. In these times the *kajika* is considered as one of the singers of spring

160 Exotics and Retrospectives

and summer; but formerly it was classed with the melodists of autumn; and people used to make autumn-trips to the country for the mere pleasure of hearing it sing. And just as various places used to be famous for the music of particular varieties of night-crickets, so there were places celebrated only as haunts of the kajika. The following were especially noted:—

Tamagawa and Ōsawa-no-Iké, — a river and a lake in the province of Yamashiro.

Miwagawa, Asukagawa, Sawogawa, Furu-no-Yamada, and Yoshinogawa, — all in the province of Yamato.

Koya-no-Iké, — in Settsu.

Ukinu-no-Iké, — in Iwami.

Ikawa-no-Numa, — in Kōzuke.

Now it is the melodious cry of the kajika, or kawazu, which is so often praised in far-Eastern verse; and, like the music of insects, it is mentioned in the oldest extant collections of Japanese poems. In the preface to the famous anthology called *Kokinshū*, compiled by Imperial Decree during the fifth year of the period of Engi (A. D. 905), the poet Ki-no-Tsurayuki, chief editor of the work, makes these interesting observations:—

— “ The poetry of Japan has its roots in the human heart, and thence has grown into a multi-form utterance. Man in this world, having a thousand millions of things to undertake and to complete, has been moved to express his thoughts and his feelings concerning all that he sees and hears. When we hear the *uguisu*¹ singing among flowers, and the voice of the *kawazu* which inhabits the waters, what mortal [*lit.*: ‘*who among the living that lives*’] does not compose poems? ”

The *kawazu* thus referred to by Tsurayuki is of course the same creature as the modern *kajika*: no common frog could have been mentioned as a songster in the same breath with that wonderful bird, the *uguisu*. And no common frog could have inspired any classical poet with so pretty a fancy as this: —

Té wo tsuité,
Uta moshi-aguru,
Kawazu kana!

“ With hands resting on the ground, reverentially you repeat your poem, O frog ! ” The charm of this little verse can best be understood by those familiar with the far-Eastern etiquette of posture

¹ *Cettia cantans*, — the Japanese nightingale.

162 Exotics and Retrospectives

while addressing a superior, — kneeling, with the body respectfully inclined, and hands resting upon the floor, with the fingers pointing outwards.¹

It is scarcely possible to determine the antiquity of the custom of writing poems about frogs; but in the *Manyōshū*, dating back to the middle of the eighth century, there is a poem which suggests that even at that time the river Asuka had long been famous for the singing of its frogs : —

Ima mo ka mo
Asuka no kawa no
Yū sarazu
Kawazu naku sé no
Kiyoku aruran.

“ Still clear in our day remains the stream of Asuka, where the kawazu nightly sing.” We find also in the same anthology the following curious reference to the singing of frogs : —

Omoboyezu
Kimaseru kimi wo,
Sasagawa no
Kawazu kikasezu
Kayeshi tsuru kamo !

¹ Such, at least, is the posture prescribed by the old etiquette for *men*. But the rules were very complicated, and varied somewhat according to rank as well as to sex. Women usually turn the fingers inward instead of outward when assuming this posture.

“Unexpectedly I received the august visit of my lord. . . . Alas, that he should have returned without hearing the frogs of the river Sawa!” And in the *Rokujōshū*, another ancient compilation, are preserved these pleasing verses on the same theme : —

Tamagawa no
Hito wo mo yogizu
Naku kawazu,
Kono yū kikéba
Oshiku ya wa aranu?

“Hearing to-night the frogs of the Jewel River [or Tamagawa], that sing without fear of man, how can I help loving the passing moment?”

II

Thus it appears that for more than eleven hundred years the Japanese have been making poems about frogs; and it is at least possible that verses on this subject, which have been preserved in the *Manyōshū*, were composed even earlier than the eighth century. From the oldest classical period to the present day, the theme has never ceased to be a favorite one with poets of all

164 Exotics and Retrospectives

ranks. A fact noteworthy in this relation is that the first poem written in the measure called *bokku*, by the famous Bashō, was about frogs. The triumph of this extremely brief form of verse — (three lines of 5, 7, and 5 syllables respectively) — is to create one complete sensation-picture; and Bashō's original accomplishes the feat, — difficult, if not impossible, to repeat in English : —

Furu iké ya,
Kawazu tobikomu,
Midzu no oto.

(“ Old pond — frogs jumping in — sound of water.”) An immense number of poems about frogs were subsequently written in this measure. Even at the present time professional men of letters amuse themselves by making short poems on frogs. Distinguished among these is a young poet known to the Japanese literary world by the pseudonym of “ Roséki,” who lives in Ōsaka and keeps in the pond of his garden hundreds of singing frogs. At fixed intervals he invites all his poet-friends to a feast, with the proviso that each must compose, during the entertainment, one poem about the inhabitants of the pond. A collection of the verses thus obtained was privately printed

in the spring of 1897, with funny pictures of frogs decorating the covers and illustrating the text.

But unfortunately it is not possible through English translation to give any fair idea of the range and character of the literature of frogs. The reason is that the greater number of compositions about frogs depend chiefly for their literary value upon the untranslatable, — upon local allusions, for example, incomprehensible outside of Japan ; upon puns ; and upon the use of words with double or even triple meanings. Scarcely two or three in every one hundred poems can bear translation. So I can attempt little more than a few general observations.

That love-poems should form a considerable proportion of this curious literature will not seem strange to the reader when he is reminded that the lovers' trysting-hour is also the hour when the frog-chorus is in full cry, and that, in Japan at least, the memory of the sound would be associated with the memory of a secret meeting in almost any solitary place. The frog referred to in such poems is not usually the *kajika*. But frogs are introduced into love-poetry in countless

166 Exotics and Retrospectives

clever ways. I can give two examples of modern popular compositions of this kind. The first contains an allusion to the famous proverb, — *I no naka no kawazu daikai wo shirazu*: “The frog in the well knows not the great sea.” A person quite innocent of the ways of the world is compared to a frog in a well; and we may suppose the speaker of the following lines to be some sweet-hearted country-girl, answering an ungenerous remark with very pretty tact: —

*Laugh me to scorn if you please ; — call me your
“ frog-in-the-well ” :
Flowers fall into my well ; and its water mirrors
the moon !*

The second poem is supposed to be the utterance of a woman having good reason to be jealous : —

*Dull as a stagnant pond you deemed the mind of
your mistress ;
But the stagnant pond can speak : you shall hear
the cry of the frog !*

Outside of love-poems there are hundreds of verses about the common frogs of ponds or rice-fields. Some refer chiefly to the volume of the sound that the frogs make : —

*Hearing the frogs of the ricefields, methinks
that the water sings.*

*As we flush the ricefields of spring, the frog-
song flows with the water.*

*From ricefield to ricefield they call : unceas-
ing the challenge and answer.*

*Ever as deepens the night, louder the chorus of
pond-frogs.*

*So many the voices of frogs that I cannot but
wonder if the pond be not wider at night than by
day!*

*Even the rowing boats can scarce proceed, so
thick the clamor of the frogs of Horiè!*

The exaggeration of the last verse is of course intentional, and in the original not uneffective. In some parts of the world — in the marshes of Florida and of southern Louisiana, for example, — the clamor of the frogs at certain seasons resembles the roaring of a furious sea; and whoever has heard it can appreciate the fancy of sound as obstacle.

168 Exotics and Retrospectives

Other poems compare or associate the sound made by frogs with the sound of rain:—

The song of the earliest frogs, — fainter than falling of rain.

What I took for the falling of rain is only the singing of frogs.

Now I shall dream, lulled by the patter of rain and the song of the frogs.

Other poems, again, are intended only as tiny pictures, — thumb-nail sketches, — such as this *hokku*, —

Path between ricefields ; frogs jumping away to right and left ; —

— or this, which is a thousand years old : —

Where the flowers of the yamabuki are imaged in the still marsh-water, the voice of the kawazu is heard ; —

— or the following pretty fancy : —

Now sings the frog, and the voice of the frog is perfumed ; — for into the shining stream the cherry-petals fall.

The last two pieces refer, of course, to the true singing frog.

Many short poems are addressed directly to the frog itself, — whether kaeru or kajika. There are poems of melancholy, of affection, of humor, of religion, and even of philosophy among these. Sometimes the frog is likened to a spirit resting on a lotos-leaf; sometimes, to a priest repeating sūtras for the sake of the dying flowers; sometimes to a pining lover; sometimes to a host receiving travellers; sometimes to a blasphemer, “always beginning” to say something against the gods, but always afraid to finish it. Most of the following examples are taken from the recent book of frog-poems published by Roséki; — each paragraph of my prose rendering, it should be remembered, represents a distinct poem: —

Now all the guests being gone, why still thus respectfully sitting, O frog?

So resting your hands on the ground, do you welcome the Rain, O frog?

You disturb in the ancient well the light of the stars, O frog!

170 Exotics and Retrospectives

*Sleepy the sound of the rain; but your voice
makes me dream, O frog!*

*Always beginning to say something against
the great Heaven, O frog!*

*You have learned that the world is void: you
never look at it as you float, O frog!*

*Having lived in clear-rushing mountain-
streams, never can your voice become stagnant,
O frog!*

The last pleasing conceit shows the esteem in which the superior vocal powers of the kajika are held.

III

I thought it strange that out of hundreds of frog-poems collected for me I could not discover a single mention of the coldness and clamminess of the frog. Except a few jesting lines about the queer attitudes sometimes assumed by the creature, the only reference to its uninviting qualities that I could find was the mild remark,

*Seen in the daytime, how uninteresting you
are, O frog!*

While wondering at this reticence concerning the chilly, slimy, flaccid nature of frogs, it all at once occurred to me that in other thousands of Japanese poems which I had read there was a total absence of allusions to tactual sensations. Sensations of colors, sounds, and odors were rendered with exquisite and surprising delicacy; but sensations of taste were seldom mentioned, and sensations of touch were absolutely ignored. I asked myself whether the reason for this reticence or indifference should be sought in the particular temperament or mental habit of the race; but I have not yet been able to decide the question. Remembering that the race has been living for ages upon food which seems tasteless to the Western palate, and that impulses to such action as hand-clasping, embracing, kissing, or other physical display of affectionate feeling, are really foreign to far-Eastern character, one is tempted to the theory that gustatory and tactual sensations, pleasurable and otherwise, have been less highly evolved with the Japanese than with us. But there is much evidence against such a theory; and the triumphs of Japanese handicraft assure us of an almost incomparable delicacy of touch developed in special directions. Whatever be the

172 Exotics and Retrospectives

physiological meaning of the phenomenon, its moral meaning is of most importance. So far as I have been able to judge, Japanese poetry usually ignores the inferior qualities of sensation, while making the subtlest of appeals to those superior qualities which we call æsthetic. Even if representing nothing else, this fact represents the healthiest and happiest attitude toward Nature. Do not we Occidentals shrink from many purely natural impressions by reason of repulsion developed through a morbid tactual sensibility? The question is at least worth considering. Ignoring or mastering such repulsion, — accepting naked Nature as she is, always lovable when understood, — the Japanese discover beauty where we blindly imagine ugliness or formlessness or loathsomeness, — beauty in insects, beauty in stones, beauty in frogs. Is the fact without significance that they alone have been able to make artistic use of the form of the centipede? . . . You should see my Kyōtō tobacco-pouch, with centipedes of gold running over its figured leather like ripples of fire!

Of Moon-Desire

Of Moon-Desire

I

HE was two years old when — as ordained in the law of perpetual recurrence — he asked me for the Moon.

Unwisely I protested, —

“The Moon I cannot give you because it is too high up. I cannot reach it.”

He answered : —

“By taking a very long bamboo, you probably could reach it, and knock it down.”

I said, —

“There is no bamboo long enough.”

He suggested : —

“By standing on the ridge of the roof of the house, you probably could poke it with the bamboo.”

— Whereat I found myself constrained to make some approximately truthful statements concerning the nature and position of the Moon.

176 Exotics and Retrospectives

This set me thinking. I thought about the strange fascination that brightness exerts upon living creatures in general,—upon insects and fishes and birds and mammals,—and tried to account for it by some inherited memory of brightness as related to food, to water, and to freedom. I thought of the countless generations of children who have asked for the Moon, and of the generations of parents who have laughed at the asking. And then I entered into the following meditation:—

Have we any right to laugh at the child's wish for the Moon? No wish could be more natural; and as for its incongruity,—do not we, children of a larger growth, mostly nourish wishes quite as innocent,—longings that if realized could only work us woe,—such as desire for the continuance after death of that very sense-life, or individuality, which once deluded us all into wanting to play with the Moon, and often subsequently deluded us in far less pleasant ways?

Now foolish as may seem, to merely empirical reasoning, the wish of the child for the Moon, I have an idea that the highest wisdom commands us to wish for very much more than the Moon,

— even for more than the Sun and the Morning-Star and all the Host of Heaven.

II

I remember when a boy lying on my back in the grass, gazing into the summer blue above me, and wishing that I could melt into it, — become a part of it. For these fancies I believe that a religious tutor was innocently responsible : he had tried to explain to me, because of certain dreamy questions, what he termed “the folly and the wickedness of pantheism,” — with the result that I immediately became a pantheist, at the tender age of fifteen. And my imaginings presently led me not only to want the sky for a playground, but also to become the sky !

Now I think that in those days I was really close to a great truth, — touching it, in fact, without the faintest suspicion of its existence. I mean the truth that the wish *to become* is reasonable in direct ratio to its largeness, — or, in other words, that the more you wish to be, the wiser you are ; while the wish *to have* is apt to be foolish in proportion to its largeness. Cosmic law permits

178 Exotics and Retrospectives

us very few of the countless things that we wish to have, but will help us to become all that we can possibly wish to be. Finite, and in so much feeble, is the wish to have: but infinite in puissance is the wish to become; and every mortal wish to become must eventually find satisfaction. By wanting to be, the monad makes itself the elephant, the eagle, or the man. By wanting to be, the man should become a god. Perhaps on this tiny globe, lighted only by a tenth-rate yellow sun, he will not have time to become a god; but who dare assert that his wish cannot project itself to mightier systems illuminated by vaster suns, and there reshape and invest him with the forms and powers of divinity? Who dare even say that his wish may not expand him beyond the Limits of Form, and make him one with Omnipotence? And Omnipotence, without asking, can have much brighter and bigger playthings than the Moon.

Probably everything is a mere question of wishing, — providing that we wish, not to have, but to be. Most of the sorrow of life certainly exists because of the wrong kind of wishing and because of the contemptible pettiness of the wishes. Even to wish for the absolute lordship and possession

of the entire earth were a pitifully small and vulgar wish. We must learn to nourish very much bigger wishes than that! My faith is that we must wish to become the total universe with its thousands of millions of worlds, — and more than the universe, or a myriad universes, — and more even than Space and Time.

III

Possibly the power for such wishing must depend upon our comprehension of the ghostliness of substance. Once men endowed with spirit all forms and motions and utterances of Nature: stone and metal, herb and tree, cloud and wind, — the lights of heaven, the murmuring of leaves and waters, the echoes of the hills, the tumultuous speech of the sea. Then becoming wiser in their own conceit, they likewise became of little faith; and they talked about “the Inanimate” and “the Inert,” — which are non-existent, — and discoursed of Force as distinct from Matter, and of Mind as distinct from both. Yet we now discover that the primitive fancies were, after all, closer to probable truth. We can-

180 Exotics and Retrospectives

not indeed think of Nature to-day precisely as did our forefathers; but we find ourselves obliged to think of her in very much weirder ways; and the later revelations of our science have revitalized not a little of the primitive thought, and infused it with a new and awful beauty. And meantime those old savage sympathies with savage Nature that spring from the deepest sources of our being, — always growing with our growth, strengthening with our strength, more and more unfolding with the evolution of our higher sensibilities, — would seem destined to sublime at last into forms of cosmical emotion expanding and responding to infinitude.

Have you never thought about those immemorial feelings? . . . Have you never, when looking at some great burning, found yourself exulting without remorse in the triumph and glory of fire? — never unconsciously coveted the crumbling, splitting, iron-wrenching, granite-cracking force of its imponderable touch? — never delighted in the furious and terrible splendor of its phantasmagories, — the ravening and bickering of its dragons, — the monstrosity of its archings, — the ghostly soaring and flapping of its spires?

Have you never, with a hill-wind pealing in your ears, longed to ride that wind like a ghost, — to scream round the peaks with it, — to sweep the face of the world with it? Or, watching the lifting, the gathering, the muttering rush and thunder-burst of breakers, have you felt no impulse kindred to that giant motion, — no longing to leap with that wild white tossing, and to join in that mighty shout? . . . And all such ancient emotional sympathies with Nature's familiar forces — do they not prelude, with their modern æsthetic developments, the future growth of rarer sympathies with incomparably subtler forces, and of longings to be limited only by our power to know? Know ether — shivering from star to star; — comprehend its sensitivities, its penetrancies, its transmutations; — and sympathies ethereal will evolve. Know the forces that spin the suns; — and already the way has been reached of becoming one with them.

And furthermore, is there no suggestion of such evolvment in the steady widening through all the centuries of the thoughts of their world-priests and poets? — in the later sense of Life-as-Unity absorbing or transforming the ancient childish sense of life-personal? — in the tone of the new

182 Exotics and Retrospectives

rapture in world-beauty, dominating the elder worship of beauty-human? — in the larger modern joy evoked by the blossoming of dawns, the blossoming of stars, — by all quiverings of color, all shudderings of light? And is not the thing-in-itself, the detail, the appearance, being ever less and less studied for its mere power to charm, and ever more and more studied as a single character in that Infinite Riddle of which all phenomena are but ideographs?

Nay! — surely the time must come when we shall desire to be all that is, all that ever has been known, — the past and the present and the future in one, — all feeling, striving, thinking, joying, sorrowing, — and everywhere the Part, — and everywhere the Whole. And before us, with the waxing of the wish, perpetually the Infinities shall widen.

And I — even I! — by virtue of that wish, shall become all forms, all forces, all conditions: Ether, Wind, Fire, Water, Earth, — all motion visible or viewless, — all vibration named of light, of color, of sonority, of torrefaction, — all thrillings piercing substance, — all oscillations picturing in blackness, like the goblin-vision of the X-rays.

By virtue of that wish I shall become the Source of all becoming and of all ceasing, — the Power that shapes, the Power that dissolves, — creating, with the shadows of my sleep, the life that shall vanish with my wakening. And even as phosphor-lampings in currents of midnight sea, so shall shimmer and pulse and pass, in mine Ocean of Death and Birth, the burning of billions of suns, the whirling of trillions of worlds. . . .

IV

—“Well,” said the friend to whom I read this revery, “there is some Buddhism in your fancies — though you seem to have purposely avoided several important points of doctrine. For instance, you must know that Nirvana is never to be reached by wishing, but by *not* wishing. What you call the ‘wish-to-become’ can only help us, like a lantern, along the darker portions of the Way. As for wanting the Moon — I think that you must have seen many old Japanese pictures of apes clutching at the reflection of the Moon in water. The subject is a Buddhist parable: the water is the phantom-flux of sensations and ideas;

184 Exotics and Retrospectives

the Moon — not its distorted image — is the sole Truth. And your Western philosopher was really teaching a Buddhist parable when he proclaimed man but a higher kind of ape. For in this world of illusion, man is truly still the ape, trying to seize on water the shadow of the Moon.”

— “Ape indeed,” I made answer, — “ but an ape of gods, — even that divine Ape of the Ramayana who may clutch the Sun!”

Retrospectives

"Murmurs and scents of the Infinite Sea."

— MATTHEW ARNOLD.

First Impressions

I

I WONDER why the emblematical significance of the Composite Photograph has been so little considered by the philosophers of evolution. In the blending and coalescing of the shadows that make it, is there no suggestion of that bioplasmic chemistry which, out of the intermingling of innumerable lives, crystallizes the composite of personality? Has the superimposition of images upon the sensitized plate no likeness to those endless superimpositions of heredity out of which every individuality must shape itself? . . . Surely it is a very weird thing, this Composite Photograph, — and hints of things weirder.

Every human face is a living composite of countless faces, — generations and generations of faces superimposed upon the sensitive film of Life

188 Exotics and Retrospectives

for the great cosmic developing process. And any living face, well watched by love or by hate, will reveal the fact. The face of friend or sweetheart has a hundred different aspects; and you know that you want, when his or her "likeness" is taken, to insist upon the reflection of the dearest of these. The face of your enemy, — no matter what antipathy it may excite, — is not invariably hateful in itself: you must acknowledge, to yourself at least, having observed in it moments of an expression the reverse of unworthy.

Probably the ancestral types that try to reproduce themselves in the modulations of facial expression, are nearly always the more recent; — the very ancient having become metamorphosed, under weight of superimposition, into a blank underlying vagueness, — a mere protoplasmic background out of which, except in rare and monstrous cases, no outline can detach itself. But in every normal face whole generations of types do certainly, by turns of mood, make flitting apparition. Any mother knows this. Studying day by day the features of her child, she finds in them variations not to be explained by simple growth. Sometimes there is a likeness to one parent or grandparent; sometimes a likeness

to another, or to remoter kindred; and at rarer intervals may appear peculiarities of expression that no member of the family can account for. (Thus, in darker centuries, the ghastly superstition of the "changeling," was not only possible, but in a certain sense quite natural.) Through youth and manhood and far into old age these mutations continue, — though always more slowly and faintly, — even while the general characteristics steadily accentuate; and death itself may bring into the countenance some strange expression never noticed during life.

II

As a rule we recognize faces by the modes of expression habitually worn, — by the usually prevalent character-tones of them, — rather than by any steady memory of lines. But no face at all moments remains exactly the same; and in cases of exceptional variability the expression does not suffice for recognition: we have to look for some fixed peculiarity, some minute superficial detail independent of physiognomy. All expression has but a relative permanency: even in faces the

190 Exotics and Retrospectives

most strongly marked, its variations may defy estimate. Perhaps the mobility is, within certain limits, in direct ratio to irregularity of feature ; — any approach to ideal beauty being also an approach to relative fixity. At all events, the more familiar we become with any common face, the more astonishing the multitude of the transformations we observe in it, — the more indescribable and bewildering its fugitive subtleties of expression. And what are these but the ebb and flow of life ancestral, — under-rippings in that well-spring unfathomable of personality whose flood is Soul. Perpetually beneath the fluid tissues of flesh the dead are moulding and moving — not singly (for in no phenomenon is there any singleness), but in currents and by surgings. Sometimes there is an eddying of ghosts of love ; and the face dawns as if a sunrise lighted it. Sometimes there is a billowing up of ghosts of hate ; and the face darkens and distorts like an evil dream, — and we say to the mind behind it, “You are not now *your better self*.” But that which we call the self, whether the better or the worse, is a complexity forever shifting the order of its combinations. According to stimulus of hope or fear, of joy or pain, there must vibrate

within every being, at differing rhythms, with varying oscillation, incalculable tremulosities of ancestral life. In the calmest normal existence slumber all the psychical tones of the past, — from the lurid red of primal sense-impulse to the violet of spiritual aspiration, — even as all known colours sleep in white light. And over the sensitive living mask, at each strong alternation of the psychical currents, flit shadowy resurrections of dead expression.

Seeing faces and their changes, we learn intuitively the relation to our own selves of the selves that confront us. In very few cases could we even try to explain how this knowledge comes, — how we reach those conclusions called, in common parlance, “first impressions.” Faces are not *read*. The impressions they give are only *felt*, and have much of the same vague character as impressions of sound, — making within us mental states either pleasant or unpleasant or somewhat of both, — evoking now a sense of danger, now a melting sympathy, occasionally a gentle sadness. And these impressions, though seldom at fault, cannot be very well explained in words. The reasons of their accuracy are likewise the reasons of their mys-

192 Exotics and Retrospectives

tery, — reasons not to be discovered in the narrow range of our personal experience, — reasons very, very much older than we. Could we remember our former lives, we should know more exactly the meaning of our likes and our dislikes. For the truth is that they are superindividual. It is not the individual eye that perceives everything perceived in a face. The dead are the real seers. But as they remain unable to guide us otherwise than by touching the chords of mental pleasure or pain, we can feel the relative meaning of faces only in a dim, though powerful way.

Instinctively, at least, superindividuality is commonly recognized. Hence such phrases as “force of character,” “moral force,” “personal fascination,” “personal magnetism,” and others showing that the influence exerted by man upon man is known to be independent of mere physical conditions. Very insignificant bodies have that within them by which formidable bodies are mastered and directed. The flesh-and-blood man is only the visible end of an invisible column of force reaching out of the infinite past into the momentary present, — only the material Symbol of an immaterial host. A contest between even two

wills is a contest of phantom armies. The domination of many personalities by the simple will of one, — hinting the perception by the compelled of superior viewless powers behind the compeller, — is never to be interpreted by the old hypothesis of soul-equality. Only by scientific psychology can the mystery of certain formidable characters be even partly explained; but any explanation must rest upon the acceptance, in some form or other, of the immense evolutionary fact of psychical inheritance. And psychical inheritance signifies the super-individual, — pre-existence revived in compound personality.

Yet, from our ethical standpoint, that super-individuality which we thus unconsciously allow in the very language used to express psychical domination, is a lower manifestation. Though working often for good, the power in itself is of evil; and the recognition of it by the subjugated is not a recognition of higher moral energy, but of a higher *mental* energy signifying larger evolutionary experience of wrong, deeper reserves of aggressive ingenuity, heavier capacities for the giving of pain. Called by no matter what euphemistic name, such power is brutal in its origin, and still allied to those malignities and ferocities

194 Exotics and Retrospectives

shared by man with lower predatory creatures. But the beauty of the superindividual is revealed in that rarer power which the dead lend the living to win trust, to inspire ideals, to create love, to brighten whole circles of existence with the charm and wonder of a personality never to be described save in the language of light and music.

III

Now if we could photographically *decompose* a composite photograph so as to separate in order inverse all the impressions interblended to make it, such process would clumsily represent what really happens when the image of a strange face is telegraphed back — like a police-photograph — from the living retina to the mysterious offices of inherited memory. There, with the quickness of an electric flash, the shadow-face is decomposed into all the ancestral types combined in it; and the resulting verdict of the dead, though rendered only by indefinable sensation, is more trustworthy than any written certificate of character could ever be. But its trustworthiness is limited to the *potential* relation of the individual seen to the

individual seeing. Upon different minds, according to the delicate balance of personality, — according to the qualitative sum of inherited experience in the psychical composition of the observer, — the same features will make very different impressions. A face that strongly repels one person may not less strongly attract another, and will produce nearly similar impressions only on groups of emotionally homogeneous natures. Certainly the fact of this ability to discern in the composition of faces that indefinable something which welcomes or which warns, does suggest the possibility of deciding some laws of ethical physiognomy; but such laws would necessarily be of a very general and simple kind, and their relative value could never equal that of the uneducated personal intuition.

How, indeed, should it be otherwise? What science could ever hope to measure the infinite possibilities of psychical combination? And the present in every countenance is a recombination of the past; — the living is always a resurrection of the dead. The sympathies and the fears, the hopes and the repulsions that faces inspire, are but revivals and reiterations, — echoes of sentiency created in millions of minds by immeasur-

196 Exotics and Retrospectives

able experience operating through immeasurable time. My friend of this hour, though no more identical with his forefathers than any single ripple of a current is identical with all the ripples that ever preceded it, is nevertheless by soul-composition one with myriads known and loved in other lands and in other lives, — in times recorded and in times forgotten, — in cities that still remain and in cities that have ceased to be, — by thousands of my vanished selves.

Beauty is Memory

Beauty is Memory

I

WHEN you first saw her your heart leaped, and a tingling shocked through all your blood like a gush of electricity. Simultaneously your senses were changed, and long so remained.

That sudden throb was the awakening of your dead; — and that thrill was made by the swarming and the crowding of them; — and that change of sense was wrought only by their multitudinous desire, — for which reason it seemed *an intensification*. They remembered having loved a number of young persons somewhat resembling her. But where, or when, they did not recollect. They — (and They, of course, are You) — had drunk of Lethe many times since then.

The true name of the River of Forgetfulness is the River of Death — though you may not find authority for the statement in classical dictionaries.

200 Exotics and Retrospectives

But the Greek story, that the waters of Lethe bring to weary souls oblivion of the past, is not quite true. One draught will indeed numb and becloud some forms of memory, — will efface the remembrance of dates and names and of other trifling details ; — but a million draughts will not produce total oblivion. Even the destruction of the world would not have that result. *Nothing is absolutely forgotten except the non-essential.* The essential can, at most, only be dimmed by the drinking of Lethe.

It was because of billions of billions of memories amassed through trillions of lives, and blended within you into some one vague delicious image, that you came to believe a certain being more beautiful than the sun. The delusion signified that she happened to resemble this composite, — mnemonic shadowing of all the dead women related to the loves of your innumerable lives. And this first part of your experience, when you could not understand, — when you fancied the beloved a witch, and never even dreamed that the witchery might be the work of ghosts, was — the Period of Wonder.

II

Wonder at what? At the power and mystery of beauty. (For whether only within yourself, or partly within and partly outside of yourself, it was beauty that you saw, and that made you wonder.) But you will now remember that the beloved seemed lovelier than mortal woman really could be;—and the how and the why of that seeming are questions of interest.

With the power to see beauty we are born — somewhat, though not altogether, as we are born with the power to perceive color. Most human beings are able to discern something of beauty, or at least of approach to beauty — though the volume of the faculty varies in different individuals more than the volume of a mountain varies from that of a grain of sand. There are men born blind; but the normal being inherits some ideal of beauty. It may be vivid or it may be vague; but in every case it represents an accumulation of countless impressions received by the race, — countless fragments of prenatal remembrance crystallized into one composite image

202 Exotics and Retrospectives

within organic memory, where, like the viewless image on a photographic plate awaiting development, it remains awhile in darkness absolute. And just because it is a composite of numberless race-memories of individual attraction, this ideal necessarily represents, in the superior mind, a something above the existing possible, — something never to be realized, much less surpassed, in the present state of humanity.

And what is the relation of this composite, fairer than human possibility, to the illusion of love? If it be permissible to speak one's imagining of the unimaginable, I can dare a theory. When, in the hour of the ripeness of youth, there is perceived some objective comeliness faintly corresponding to certain outlines of the inherited ideal, at once a wave of emotion ancestral bathes the long-darkened image, defines it, illuminates it, — and so deludes the senses; — for the sense-reflection of the living objective becomes temporarily blended with the subjective phantasm, — with the beautiful luminous ghost made of centillions of memories. Thus to the lover the common suddenly becomes the impossible, because he really perceives blended with it the superindividual and superhuman. He is much

too deeply bewitched by that supernatural to be persuaded of his illusion, by any reasoning. What conquers his will is not the magic of anything living or tangible, but a charm sinuous and fugitive and light as fire, — a spectral snare prepared for him by myriads unthinkable of generations of dead.

So much and no more of theory I venture as to the *how* of the riddle. But what of the *why*, — the reason of the emotion made by this ghostly beauty revived out of the measureless past? What should beauty have to do with a superindividual ecstasy older than all æsthetic feeling? What is the evolutionary secret of the fascination of beauty?

I think that an answer can be given. But it will involve the fullest acceptance of this truth: — *There is no such thing as beauty-in-itself.*

All the riddles and contradictions of our æsthetic systems are natural consequences of the delusion that beauty is a something absolute, a transcendental reality, an eternal fact. It is true ~~that~~ the appearance we call beauty is the symbol of a fact, — is the visible manifestation of a development beyond the ordinary, — a bodily evolution

204 Exotics and Retrospectives

more advanced than the existing average. In like manner what we call grace is a real manifestation of the economy of force. But since there can be no cosmic limit to evolutionary possibilities, there never can be any standards of grace or of beauty that are not relative and essentially transitory; and there can be no physical ideals, — not even Greek ideals, — that might not in the course of human evolution or of superhuman evolution be so much more than realized as to become vulgarities of form. An ultimate of beauty is inconceivable and impossible; no term of æsthetics can ever represent more than the idea of a phase of the perpetual becoming, a temporary relation in comparative evolution. Beauty-in-itself is only the name of a sensation, or complex of sensation, mistaken for objectivity — much as sound and light and color were once imagined to be realities.

Yet what is it that attracts? — what is the meaning of the resistless emotion which we call the Sense of Beauty?

Like the sensing of light or color or perfume, the recognition of beauty is a recognition of fact. But that fact bears to the feeling evoked no more likeness than the reality of five hundred billions of ether-shiverings per second bears to the sensation

of orange. Still in either case the fact is a manifestation of force. Representing higher evolution, the phenomenon termed beauty also represents a relatively superior fitness for life, a higher ability to fulfil the conditions of existence ; and it is the non-conscious perception of this representation that makes the fascination. The longing aroused is not for any mere abstraction, but for greater completeness of faculty as means to the natural end. To the dead within each man, beauty signifies the presence of what they need most, — Power. They know, in despite of Lethe, that when they lived in comely bodies life was usually made easy and happy for them, and that when prisoned in feeble or in ugly bodies, they found life miserable or difficult. They want to live many times again in sound young bodies, — in shapes that assure force, health, joy, quickness to win and energy to keep the best prizes of life's contest. They want, if possible, conditions better than any of the past, but in no event conditions worse.

III

And so the Riddle resolves itself as Memory, — immeasurable Memory of all bodily fitness for the ends of life: a Composite glorified, doubtless, by some equally measureless inherited sense of all the vanished joys ever associated with such fitness.

Infinite, may we not term it — this Composite? Aye, but not merely because the multitudes of dead memories that make it are unspeakable. Equally unspeakable the width and the depth of the range of them throughout the enormity of Time. . . . O lover, how slender the beautiful witch, — the ghost within the ghost of you! Yet the depth of that ghost is the depth of the Nebulous Zone bespanning Night, — the luminous Shadow that Egypt figured of old as Mother of the Sun and the Gods, curving her long white woman's-body over the world. As a vapor of phosphorus, or wake of a ship in the night, — only so with naked eye can we behold it. But pierced by vision telescopic, it is revealed as the further side of the Ring of the Cosmos, — dim belt of millions of suns seemingly massed together like

the cells of a living body, yet so seeming only by reason of their frightful remoteness. Even thus really separated each from each in the awfulness of the Night of Time, — by silent profundities of centuries, — by interspaces of thousands and of myriads of years, — though collectively shaping to love's desire but one dim soft sweet phantom, — are those million-swarmed memories that make for youth its luminous dream of beauty.

Sadness in Beauty

Sadness in Beauty

THE poet who sang that beautiful things bring sadness, named as beautiful things music and sunset and night, clear skies and transparent waters. Their sadness he sought to explain by vague soul-memories of Paradise. Very old-fashioned this explanation; but it contains a shadowing of truth. For the mysterious sadness associated with the sense of beauty is certainly not of this existence, but of countless anterior lives, — and therefore indeed a sadness of reminiscence.

Elsewhere I try to explain why certain qualities of music, and certain aspects of sunset produce sadness, and even more than sadness. As for impressions of night, however, I doubt if the emotion that night evokes in this nineteenth century can be classed with the sadness that beauty brings. A wonderful night, — a tropical night, for instance, lucent and lukewarm, with a new moon in it, curved and yellow like a ripe banana, — may inspire, among other minor feelings

212 Exotics and Retrospectives

something of tenderness ; but the great dominant emotion evoked by the splendor of the vision is not sadness. Breaking open the heavens to their highest, night widens modern thought over the bounds of life and death by the spectacle of that infinite whose veil is day. Night also forces remembrance of the mystery of our tether, — the viewless force that holds us down to this wretched little ball of a world. And the result is cosmic emotion — vaster than any sense of the sublime, — drowning all other emotion, — but nowise akin to the sadness that beauty causes. Anciently the emotion of night must have been incomparably less voluminous. Men who believed the sky to be a solid vault, never could have felt, as we feel it, the stupendous pomp of darkness. And our ever-growing admiration of those awful astral questions in the Book of Job, is mainly due to the fact that, with the progress of science, they continue to make larger and larger appeal to forms of thought and feeling which never could have entered into the mind of Job.

But the sadness excited by the beauty of a perfect day, or by the charm of nature in her brightest moods, is a fact of another kind, and

needs a different explanation. Inherited the feeling must be, — but through what cumulation of ancestral pain? Why should the tenderness of an unclouded sky, the soft green sleep of summered valleys, the murmurous peace of sun-flecked shadows, inspire us with sadness? Why should any inherited emotion following an æsthetic perception be melancholy rather than joyous? . . . Of course I do not refer to the sense of vastness or permanence or power aroused by the sight of the sea, or by any vision of sea-like space, or by the majesty of colossal ranges. That is the feeling of the sublime, — always related to fear. Æsthetic sadness is related rather to desire.

“All beautiful things bring sadness,” is a statement as near to truth as most general statements; but the sadness and its evolutionary history must vary according to circumstances. The melancholy awakened by the sight of a beautiful face cannot be identical with that awakened by the sight of a landscape, by the hearing of music, or by the reading of a poem. Yet there should be some one emotional element common to æsthetic sadness, — one general kind of feeling

214 Exotics and Retrospectives

which would help us to solve the riddle of the melancholy inspired by the sight of beauty in Nature. Such a common element, I believe, is inherited longing, — inherited dim sense of loss, shadowed and qualified variously by interrelated feelings. Different forms of this inheritance would be awakened by different impressions of the beautiful. In the case of human beauty, the æsthetic recognition might be toned or shadowed by immemorial inheritance of pain — pain of longing, and pain of separation from numberless forgotten beloved. In the case of a color, a melody, an effect of sunshine or of moonlight, the sense-impressions appealing to æsthetic feeling might equally appeal to various ancestral memories of pain. The melancholy given by the sight of a beautiful landscape is certainly a melancholy of longing, — a sadness massive as vague, because made by the experience of millions of our dead.

“The æsthetic feeling for nature in its purity,” declares Sully, “is a modern growth . . . the feeling for nature’s wild solitudes is hardly older than Rousseau.” Perhaps to many this will seem rather a strong statement in regard to the races of the West; — it is not true of the races of the Far East, whose art and poetry yield ancient proof to the

contrary. But no evolutionist would deny that the æsthetic love of nature has been developed through civilization, and that many abstract sentiments now involved with it are of very recent origin. Much of the sadness made in us by the sight of a beautiful landscape would therefore be of comparatively modern growth, though less modern than some of the higher qualities of æsthetic pleasure which accompany the emotion. I surmise it to be mainly the inherited pain of that separation from Nature which began with the building of walled cities. Possibly there is blended with it something of incomparably older sorrow — such as the immemorial mourning of man for the death of summer ; but this, and other feelings inherited from ages of wandering, would revive more especially in the great vague melancholy that autumn brings into what we still call our souls.

Ever as the world increasing its wisdom increases its sorrow, our dwellers in cities built up to heaven more and more regret the joys of humanity's childhood, — the ancient freedom of forest and peak and plain, the brightness of mountain water, the cool keen sweetness of the

216 Exotics and Retrospectives

sea's breath and the thunder-roll of its eternal epic. And all this regret of civilization for Nature irretrievably forsaken, may somehow revive in that great soft dim sadness which the beauty of a landscape makes us feel.

In one sense we are certainly wrong when we say that the loveliness of a scene brings tears to the eyes. It cannot be the loveliness of the scene; — it is the longing of generations quickening in the hearts of us. The beauty we speak of has no real existence: the emotion of the dead alone makes it seem to be, — the emotion of those long-buried millions of men and women who loved Nature for reasons very much simpler and older than any æsthetic emotion is. To the windows of the house of life their phantoms crowd, — like prisoners toward some vision of bright skies and flying birds, free hills and glimmering streams, beyond the iron of their bars. They behold their desire of other time, — the vast light and space of the world, the wind-swept clearness of azure, the hundred greens of wold and plain, the spectral promise of summits far away. They hear the shrilling and the whirr of happy winged things, the chorus of cicada and bird, the lisp and laughing of water, the under-

tone of leafage astir. They know the smell of the season — all sharp sweet odors of sap, scents of flower and fruitage. They feel the quickening of the living air, — the thrilling of the great Blue Ghost.

But all this comes to them, filtered through the bars and veils of their rebirth, only as dreams of home to hopeless exile, — of child-bliss to desolate age, — of remembered vision to the blind!

Parfum de Jeunesse

Parfum de Jeunesse

“ I REMEMBER,” — said an old friend, telling me the romance of his youth, — “ that I could always find her cloak in the cloak-room without a light, when it was time to take her home. I used to know it in the dark, because it had the smell of sweet new milk. . . . ”

Which set me somehow to thinking of English dawns, the scent of hayfields, the fragrance of hawthorn days ; — and cluster after cluster of memories lighted up in succession through a great arc of remembrance that flashed over half a lifetime even before my friend’s last words had ceased to sound in my ears. And then recollection smouldered into revery, — a revery about the riddle of the odor of youth.

That quality of the *parfum de jeunesse* which my friend described is not uncommon, — though I fancy that it belongs to Northern rather than to

222 Exotics and Retrospectives

Southern races. It signifies perfect health and splendid vigor. But there are other and more delicate varieties of the attraction. Sometimes it may cause you to think of precious gums or spices from the uttermost tropics; sometimes it is a thin, thin sweetness, —like a ghost of musk. It is not personal (though physical personality certainly has an odor): it is the fragrance of a season, — of the springtime of life. But even as the fragrance of spring, though everywhere a passing delight, varies with country and climate, so varies the fragrance of youth.

Whether it be of one sex more than of another were difficult to say. We notice it chiefly in girls and in children with long hair, probably because it dwells especially in the hair. But it is always independent of artifice as the sweetness of the wild violet is. It belongs to the youth of the savage not less than to the youth of the civilized, — to the adolescence of the peasant not less than to that of the prince. It is not found in the sickly and the feeble, but only in perfect joyous health. Perhaps, like beauty, it may have some vague general relation to conditions ethical. Individual odors assuredly have, — as the discrimination of the dog gives witness.

Evolutionists have suggested that the pleasure we find in the perfume of a flower may be an emotional reflection from æons enormously remote, when such odor announced, to forms of ancestral life far lower than human, the presence of savory food. To what organic memory of association might be due, upon the same hypothesis, our pleasure in the perfume of youth?

Perhaps there were ages in which that perfume had significances more definite and special than any which we can now attach to it. Like the pleasure yielded by the fragrance of flowers, the pleasure given by the healthy fragrance of a young body may be, partly at least, a survival from some era in which odorous impressions made direct appeal to the simplest of life-serving impulses. Long dissociated from such possible primitive relation, odor of blossom and odor of youth alike have now become for us excitants of the higher emotional life, — of vague but voluminous and supremely delicate æsthetic feeling.

Like the feeling awakened by beauty, the pleasure of odor is a pleasure of remembrance, — is the magical appeal of a sensation to countless memories of countless lives. And even as the scent of a blossom evokes the ghosts of feelings

224 Exotics and Retrospectives

experienced in millions of millions of unrecorded springs,—so the fragrance of youth bestirs within us the spectral survival of sensations associated with every vernal cycle of all the human existence that has vanished behind us.

And this fragrance of fresh being likewise makes invocation to ideal sentiment,—to parental scarcely less than to amorous tenderness,—because conjoined through immeasurable time with the charm and the beauty of childhood. Out of night and death is summoned by its necromancy more than a shadowy thrill from the rapture of perished passion,—more than a phantom-reflex from the delight of countless bridals;—even something also of the ecstasy of pressing lips of caress to the silky head of the first-born,—faint reflucence from the forgotten joy of myriad millions of buried mothers.

Azure Psychology

“

Azure Psychology

I

LEAST common of the colors given by nature to bird, insect, and blossom is bright pure blue. Blue flowers are believed to proclaim for the plant that bears them a longer history of unchecked development than flowers of any other primary color suggest; and the high cost of the tint is perhaps hinted by the inability of the horticulturist to produce blue roses or blue chrysanthemums. Vivid blue appears in the plumage of some wonderful birds, and on the wings of certain amazing butterflies—especially tropical butterflies;—but usually under conditions that intimate a prodigious period of evolutionary specialization. Altogether it would seem that blue was the latest pure color developed in the evolution of flower and scale and feather; and there is reason to believe that the power of perceiving blue was not acquired until after the power

228 Exotics and Retrospectives

of distinguishing red and green and yellow had already been gained.

Whether the hypothesis be true or false, it is certainly noteworthy that, of the primary colors, blue alone has remained, up to the present time, a color pleasurable in its purest intensity to the vision of highly civilized races. Bright red, bright green, bright orange, yellow, or violet, can be used but sparingly in our nineteenth-century attire and decoration. They have become offensive in their spectral purity because of the violence of the sensations that they give; — they remain grateful only to the rudimentary æsthetic feeling of children, of the totally uncultivated, or of savages. What modern beauty clothes herself in scarlet, or robes herself in fairy green? We cannot paint our chambers violet or saffron — the mere idea jars upon our nerves. But the color of heaven has not ceased to delight us. Sky-blue can still be worn by our fairest; and the luminous charm of azure ceilings and azure wall-surfaces — under certain conditions of lighting and dimension — is still recognized.

“Nevertheless,” some one may say, “we do not paint the *outside* of a building skyblue; and a skyblue façade would be even more disagree-

able than an orange or a crimson façade." This is true,—but not because the effect of the color upon large surfaces is necessarily displeasing. It is true only because vivid blue, unlike other bright colors, is never associated in our experience of nature with large and opaque solidity. When mountains become blue for us, they also become ghostly and semi-transparent. Upon a housefront the color must appear monstrous, because giving the notion of the unnatural,—of a huge blue dead solidity tangibly proximate. But a blue ceiling, a blue vault, blue walls of corridors, may suggest the true relation of the color to depth and transparency, and make for us a grateful illusion of space and summer-light. Yellow, on the other hand, is a color well adapted to façades, because associated in memory with the beautiful effect of dying sunlight over pale broad surfaces.

But although yellow remains, after blue, the most agreeable of the primary colors, it cannot often be used for artistic purposes, like blue, in all its luminous strength. Pale tones of yellow,—especially creamy tones,—are capable of an immense variety of artistic employment; but this is not true of the brilliant and burning yellow. Only blue is always agreeable in its most vivid

230 Exotics and Retrospectives

purity—providing that it be not used in massive displays so as to suggest the anomaly of blue hardness and blue opacity.¹

In Japan, which may still be called the land of perfect good taste in chromatics— notwithstanding the temporary apparition of some discords due to Western influence, — almost any ordinary street-vista tells the story of the race-experience with color. The general tone of the vista is given by bluish greys above and dark blues below, sharply relieved by numerous small details of white and cool yellow. In this perspective the bluish-greys represent the tiling of roofs and awnings; the dark blues, shop-draperies; the bright whites, narrow strips of plastered surface; the pale yellows, mostly smooth naked wood, and glimpses of rush-mattings. The broader stretches of color are furthermore relieved and softened by the sprinkling of countless ideographs over draperies and shop-signs— black, (and sometimes red) against white; white or

¹ Blue jewels, blue eyes, blue flowers delight us; but in these the color accompanies either transparency or visible softness. It is perhaps because of the incongruity between hard opacity and blue that the sight of a book in sky-blue binding is unendurable. I can imagine nothing more atrocious.

gold on blue. Strong yellows, greens, oranges, purples are invisible. In dress also greys and cool blues rule: when you do happen to see robes or *bakama* all of one brilliant color, — worn by children or young girls, — that color is either a sky-blue, or a violet with only just enough red in it to kindle the azure, — a rainbow-violet of exquisite luminosity.¹

II

But I wish to speak neither of the æsthetic value of blue in relation to arts and industries, nor of the optical significance of blue as the product of six hundred and fifty billion oscillations of the luminous ether per second. I only want to say something about the psychology of the color, — about its subjective evolutionary history.

Certainly the same apparition of blue will bestir

¹ This essay was written several years ago. During 1897 I noticed for the first time since my arrival in Japan a sprinkling of dark greens and light-yellows in the fashions of the season; but the general tone of costume was little affected by these exceptions to older taste. The light-yellow appeared only in some girdles of children.

232 Exotics and Retrospectives

in different minds different degrees of feeling, and will set in motion, through memory-revival of unlike experiences, totally dissimilar operations of fancy. But independently of such psychological variation — mainly personal and superficial, — there can be no doubt that the color evokes in the *general* mind one common quality of pleasurable feeling, — a vivacious thrill, — a tone of emotional activity unmistakably related to the higher zones of sentiency and of imagination.

In my own case the sight of vivid blue has always been accompanied by an emotion of vague delight — more or less strong according to the luminous intensity of the color. And in one experience of travel, — sailing to the American tropics, — this feeling rose into ecstasy. It was when I beheld for the first time the grandest vision of blue in this world, — the glory of the Gulf-Stream : a magical splendor that made me doubt my senses, — a flaming azure that looked as if a million summer skies had been condensed into pure fluid color for the making of it. The captain of the ship leaned over the rail with me ; and we both watched the marvellous sea for a long time in silence. Then he said : —

“Fifteen years ago I took my wife with me on this trip — just after we were married, it was; — and she wondered at the water. She asked me to get her a silk dress of the very same color. I tried in ever so many places; but I never could get just what she wanted till a chance took me to Canton. I went round the Chinese silk-shops day after day, looking for that color. It was n’t easy to find; but I did get it at last. Was n’t she glad, though, when I brought it home to her! . . . She’s got it yet. . . .”

Still, at times, in sleep, I sail southward again over the wonder of that dazzling surging azure; — then the dream shifts suddenly across the world, and I am wandering with the Captain through close dim queer Chinese streets, — vainly seeking a silk of the Blue of the Gulf-Stream. And it was this memory of tropic days that first impelled me to think about the reason of the delight inspired by the color.

III

Possibly the wave of pleasurable emotion excited by a glorious vision of blue is not more complex than the feeling aroused by any massive display of any other pure color;— but it is higher in the quality of its complexity. For the ideational elements that blend in the volume of it include not a few of the noblest, — not a few of those which also enter into the making of Cosmic Emotion.

Being the seeming color of the ghost of our planet, — of the breath of the life of the world, — blue is likewise the color apparent of the enormity of day and the abyss of the night. So the sensation of it makes appeal to the ideas of Altitude, of Vastness, and of Profundity; —

Also to the idea of Space in Time; for blue is the tint of distance and of vagueness; —

Also to the idea of Motion; for blue is the color of Vanishing and of Apparition. Peak and vale, bay and promontory, turn blue as we leave them; and out of blue they grow and define again as we glide homeward.

And therefore in the volume of feeling awakened in us by the sensation of blue, there should be something of the emotion associated with experience of change, — with countless ancestral sorrows of parting. But if there indeed be any such dim survival, it is utterly whelmed and lost in that all-radiant emotional inheritance related to Summer and Warmth, — to the joy of past humanity in the light of cloudless days.

Still more significant is the fact that although blue is a sacred color, the dominant tones of the feeling it evokes are gladness and tenderness. Blue speaks to us of the dead and of the gods, but never of their awfulness.

Now when we reflect that blue is the color of the idea of the divine, the color pantheistic, the color ethical, — thrilling most deeply into those structures of thought to which belong our sentiments of reverence and justice, of duty and of aspiration, — we may wonder why the emotion it calls up should be supremely gladsome. Is it because that sensuous race-experience of blue skies, — that measureless joy of the dead in light and warmth, which has been transmitted to each of us in organic memory, — is vastly older than the

236 Exotics and Retrospectives

religious idea, and therefore voluminous enough to drown any ethical feeling indirectly related to the color-sensation? Partly so, no doubt; — but I will venture another, and a very simple explanation: —

All moral pulsations in the wave of inherited feeling which responds to the impression of blue, belong only to the beautiful and tender aspects of faith.

And thus much having been ventured, I may presume a little further.

I imagine that for many of us one of the most powerful elements in this billow of pleasurable feeling evoked by the vision of blue, *is* spiritual, in the fullest ethical meaning of the word; — that under the fleeting surface-plexus of personal emotion empirically associated with the color, pulses like a tide the transmitted religious emotion of unnumbered ages; — and that, quickening and vivifying all inherited sense of blue as beauty, is the inherited lucent rapture of blue as the splendor mystical, — as the color of the everlasting Peace. Something of all human longing for all the Paradises ever imagined, — of all pre-existent trust in the promise of reunion after death, — of all ex-

pired dreams of unending youth and bliss, — may be revived for us, more or less faintly, in this thrill of the delight of azure. Even as through the jewel-radiance of the Tropic Stream pass undulations from the vaster deep, — with their sobbings and whisperings, their fugitive drift and foam, — so, through the emotion evoked by the vision of luminous blue, there may somehow quiver back to us out of the Infinite — (multitudinous like the billion ether-shiverings that make the blue sensation of a moment) — something of all the aspirations of the ancient faiths, and the power of the vanished gods, and the passion and the beauty of all the prayer ever uttered by lips of man.

A Serenade

A Serenade

I

“**B**ROKEN” were too abrupt a word. My sleep was not broken, but suddenly melted and swept away by a flow of music from the night without, — music that filled me with expectant ecstasy by the very first gush of its sweetness: a serenade, — a playing of flutes and mandolines.

The flutes had dove-tones; and they cooed and moaned and purred; — and the mandolines throbbed through the liquid plaint of them, like a beating of hearts. The players I could not see: they were standing in heavy shadows flung into the street by a tropical moon, — shadows of plantain and of tamarind.

Nothing in all the violet gloom moved but that music, and the fire-flies, — great bright slow sparks of orange and of emerald. The warm air held its breath; the plumes of the palms were

242 Exotics and Retrospectives

still ; and the haunting circle of the sea, blue even beneath the moon, lay soundless as a circle of vapor.

Flutes and mandolines — a Spanish melody — nothing more. Yet it seemed as if the night itself were speaking, or, out of the night some passionate life long since melted into Nature's mystery, but continuing to haunt the tepid, odorous, sparkling darkness of that strange world, which sleeps under the sun, and wakens only to the stars. And its utterance was the ghostly reiteration of rapture that had been, and never again could be, — an utterance of infinite tenderness and of immeasurable regret.

Never before had I felt how the simplest of music could express what no other art is able even to suggest ; — never before had I known the astonishing possibilities of melody without ornament, without artifice, — yet with a charm as bewildering, as inapprehensible, as the Greek perception of the grace supreme.

Now nothing in perfect art can be only voluptuous ; and this music, in despite of its caress, was immeasurably, ineffably sad. And the exquisite blending of melancholy with passion in a

motive so simple, — one low long cooing motive, over and over again repeated, like a dove's cry, — had a *strangeness* of beauty like the musical thought of a vanished time, — one rare survival, out of an era more warmly human than our own, of some lost art of melody.

II

The music hushed, and left me dreaming, and vainly trying to explain the emotion that it had made. Of one thing only I felt assured, — that the mystery was of other existences than mine.

For the living present, I reflected, is the whole dead past. Our pleasures and our pains alike are but products of evolution, — vast complexities of sentiency created by experience of vanished beings more countless than the sands of a myriad seas. All personality is recombination; and all emotions are of the dead. Yet some seem to us more ghostly than others, — partly because of their greater relative mystery, partly because of the immense power of the phantom waves composing them. Among pleasurable forms, the ghostliest are the emotion of first love, the emo-

244 Exotics and Retrospectives

tion following the perception of the sublime in nature—of terrible beauty,—and the emotion of music. Why should they so be? Probably because the influences that arouse them thrill furthest into our forgotten past. Frightful as the depth of the abyss of Space is the depth of one thinking life,—measureless even by millions of ages;—and who may divine how profoundly in certain personalities the mystery can be moved. We only know that the deeper the thrilling, the heavier the wave responding, and the weirder the result,—until those profundities are reached of which a single surge brings instant death, or makes perpetual ruin of the delicate structures of thought.

Now any music that makes powerful appeal to the emotion of love, awakening the passional latency of the past within us, must inevitably revive dead pain not less than dead delight. Pain of the conquest of will by a mystery resistless and pitiless, the torture of doubt, the pangs of rivalry, the terror of impermanency,—shadows of these and many another sorrow have had their part in the toning of that psychical inheritance which makes at once love's joy and love's anguish, and grows forever from birth to birth.

And thus it may happen that a child, innocent of passion or of real pain, is moved even to tears by music uttering either. Unknowingly he feels in that utterance a shadowing of the sorrow of numberless vanished lives.

III

But it seemed to me that the extraordinary emotion awakened by that tropical melody needed an explanation more qualitative than the explanation above attempted. I felt sure that the dead past to which the music had made appeal must have been a special past,—that some particular class or group of emotional memories had been touched. Yet what class?—what group? For the time being, I could not even venture a guess.

Long afterwards, however, some chance happening revived for me with surprising distinctness the memory of the serenade;—and simultaneously, like a revelation, came the certainty that the whole spell of the melody—all its sadness and all its sweetness—had been supremely and uniquely *feminine*.

246 Exotics and Retrospectives

— “Assuredly,” I reflected, as the new conviction grew upon me, “the primal source of all human tenderness has been the Eternal Feminine. . . . Yet how should melody uttering only the soul of woman have been composed by man, and bestir within man this innumerable quickening of emotional reminiscence?”

The answer shaped itself at once, —

— “*Every mortal man has been many millions of times a woman.*”

Undoubtedly in either sex survives the sum of the feelings and of the memories of both. But some rare experience may appeal at times to the feminine element of personality alone, — to one half only of the phantom-world of Self, — leaving the other hemisphere dormant and unilluminated. And such experience had found embodiment in the marvellous melody of the serenade which I had heard.

That tremulous sweetness was never masculine ; that passional sadness never was of man : — unisexual both and inseparably blended into a single miracle of tone-beauty. Echoing far into the mystery of my own past, the enchantment of that tone had startled from their sleep of ages count-

less buried loves, and set the whole delicate swarm fluttering in some delicious filmy agony of revival, — set them streaming and palpitating through the Night of Time, — like those myriads eddying forever through the gloom of the vision of Dante.

They died with the music and the moon, — but not utterly. Whenever in dream the memory of that melody returns, again I feel the long soft shuddering of the dead, — again I feel the faint wings spread and thrill, responsive to the cooing of those spectral flutes, to the throbbing of those shadowy mandolines. And the elfish ecstasy of their thronging awakes me; but always with my wakening the delight passes, and in the dark the sadness only lingers, — unutterable, — infinite. . . !

A Red Sunset

A Red Sunset

I

THE most stupendous apparition of red that I ever saw was a tropical sunset in a cloudless sky,—a sunset such as can be witnessed only during exceptional conditions of atmosphere. It began with a flaming of orange from horizon to zenith ; and this quickly deepened to a fervid vermilion, through which the crimson disk glared like the cinder of a burnt-out star. Sea, peak, and palm caught the internal glow ; and I became conscious of a vague strange horror within myself, — a sense of distress like that which precedes a nightmare. I could not then explain the feeling ; — I only knew that the color had aroused it.

But how aroused it ? — I later asked myself. Common theories about the ugly sensation of bright red could not explain for me the weirdness

252 Exotics and Retrospectives

of that experience. As for the sanguine associations of the color, they could interpret little in my case ; for the sight of blood had never affected my nerves in the least. I thought that the theory of psychical inheritance might furnish some explanation ; — but how could it meet the fact that a color, which the adult finds insufferable, continues to delight the child ?

All ruddy tones, however, are not unpleasant to refined sensibility : some are quite the reverse, — as, for example, the various tender colors called pink or rose. These appeal to very agreeable kinds of sensuous experience : they suggest delicacy and softness ; they awaken qualities of feeling totally different from those excited by vermilion or scarlet. Pink, being the tint of the blossoming of flowers and the blossoming of youth, — of the ripeness of fruit and the ripeness of flesh, is ever associated with impressions of fragrance and sweetness, and with memories of beautiful lips and cheeks.

No : it is only the pure brilliant red, the fervid red, that arouses sinister feeling. Experience with this color seems to have been the same even in societies evolved under conditions utterly unlike those of our own history, — Japan being a signifi-

cant example. The more refined and humane a civilization becomes, the less are displays of the color tolerated in its cultivated circles. But how are we to account for that pleasure which bright red still gives to the children of the people who detest it ?

II

Many sensations which delighted us as children, prove to us either insipid or offensive in adult life. Why ? Because there have grown up with our growth feelings which, though now related to them, were dormant during childhood ; ideas now associated with them, but undeveloped during childhood ; and experiences connected with them, never imagined in childhood.

For the mind, at our birth, is even less developed than the body ; and its full ripening demands very much more time than is needed for the perfect bodily growth. Both by his faults and by his virtues the child resembles the savage, because the instincts and the emotions of the primitive man are the first to mature within him ; — and they are the first to mature in the individual because they were the first evolved in the history of the

254 Exotics and Retrospectives

race, being the most necessary to self-maintenance. That in later adult life they take a very inferior place is because the nobler mental and moral qualities — comparatively recent products of social discipline and civilized habit — have at last gained massiveness enough to dominate them under normal conditions; — have become like powerful new senses upon which the primitive emotional nature learns to depend for guidance.

All emotions are inheritances; but the higher, because in evolutionary order the latest, develop only with the complete unfolding of the brain. Some, ethically considered the very loftiest, are said to develop only in old age, — to which they impart a particular charm. Other faculties also of a high order, chiefly æsthetic, would seem in the average of cases to mature in middle life. And to this period of personal evolution probably belongs the finer sense of beauty in color, — a much simpler faculty than the ethical sense, though possibly related to it in ways unsuspected.

Vivid colors appeal to the rudimentary æsthetic sense of our children, as they do to the æsthetic sense of savages; but the civilized adult dislikes most of the very vivid colors: they exasperate his nerves like an excessive crash of brass and

drums during a cheap orchestral performance. Cultured vision especially shrinks from a strong blaze of red. Only the child delights in vermilion and scarlet. Growing up he gradually learns to think of what we call "loud red" as vulgar, and to dislike it much more than did his less delicate ancestors of the preceding century. Education helps him to explain why he thinks it vulgar, but not to explain why he *feels* it to be unpleasant, — independently of the question whether it tires his eyes.

III

And now I come back to the subject of that tropical sunset.

Even in the common æsthetic emotion excited by the spectacle of any fine sunset, there are elements of feeling ancient as the race, — dim melancholy, dim fear, inherited from ages when the dying of the day was ever watched with sadness and foreboding. After that mighty glow, the hours of primeval horror, — the fear of blackness, the fear of nocturnal foes, the fear of ghosts. These, and other weird feelings, — independently of the physical depression following

256 Exotics and Retrospectives

the withdrawal of sunlight, — would by inheritance become emotionally related to visions of sundown; and the primitive horror would at last be evolutionally transmuted to one elemental tone of the modern sublime. But the spectacle of a vast *crimson* sunset would awaken feelings less vague than the sense of the sublime, — feelings of a definitely sinister kind. The very color itself would make appeal to special kinds of inherited feelings, simply because of its relation to awful spectacles, — the glare of the volcano-summit, the furious vermilion of lava, the raging of forest-fires, the overglow of cities kindling in the track of war, the smouldering of ruin, the blazing of funeral-pyres. And in this lurid race-memory of fire as destroyer, — as the “ravening ghost” of Northern fancy, — there would mingle a vague distress evolved through ancestral experience of *crimson heat in relation to pain*, — an organic horror. And the like tremendous color in celestial phenomena would revive also inherited terror related of old to ideas of the portentous and of the wrath of gods.

Probably the largest element of the unpleasant feeling aroused in man by this angry color has

been made by the experience of the race with fire. But in even the most vivid red there is always some suggestion of passion, and of the tint of blood. Inherited emotion related to the sight of death must be counted among the elements of the sinister feeling that the hue excites. Doubtless for the man, as for the bull, the emotional wave called up by displays of violent red, is mostly the creation of impressions and of tendencies accumulated through all the immense life of the race ; and, as in the old story of Thomas the Rhymer, we can say of our only real Fairy-land, our ghostly past, —

. . . “ *A' the blude that's shed on earth
Rins through the springs o' that Countrie.*”

But those very associations that make burning red unbearable to modern nerves must have already been enormously old when it first became the color of pomp and luxury. How then should such associations affect us unpleasantly now ?

I would answer that the emotional suggestions of the color continued to be pleasurable for the adult, as they still are for the child, only while they remained more vague and much less voluminous than at present. Becoming intensified in

258 Exotics and Retrospectives

the modern brain, they gradually ceased to yield pleasure, — somewhat as warmth increased to the degree of heat ceases to be pleasurable. Still later they became painful ; and their actual painfulness exposes the fundamentally savage nature of those sensations of splendor and power which the color once called into play. And the intensification of the feeling evoked by red has not been due merely to later accumulation of inherited impressions, but also to the growth and development of emotions essentially antithetical to ideas of violence and pain, and yet inseparable from them. The moral sensibility of an era that has condemned not a few of the amusements of our forebears to the limbo of old barbarities, — the humanity of an age that refuses to believe in a hell of literal fire, that prohibits every brutal sport, that compels kindness to animals, — is offended by the cruel suggestiveness of the color. But within the slowly-unfolding brain of the child, this modern sensibility is not evolved ; — and until it has been evolved, with the aid of experience and of education, the feeling aroused by such a color as vivid scarlet will naturally continue to be pleasurable rather than painful.

IV

While thus trying to explain why a color dignified as imperial in other centuries should have become offensive in our own, I found myself wondering whether most of our actual refinements might not in like manner become the vulgarities of a future age. Our standards of taste and our ideals of beauty can have only a value relative to conditions which are constantly changing. Real and ideal alike are transitory, — mere apparitional undulations in the flux of the perpetual Becoming. Perhaps the finest ethical or æsthetical sentiment of to-day will manifest itself in another era only as some extraordinary psychological atavism, — some rare individual reversion to the conditions of a barbarous past.

What in the meantime would be the fate of sensations that are even now becoming intolerable? Any faculty, mental or physical, however previously developed by evolutionary necessities, would have a tendency to dwindle and disappear from the moment that it ceased to be either useful or pleasurable. Continuance of the power to perceive red would depend upon the possible

260 Exotics and Retrospectives

future usefulness of that power to the race. Not without suggestiveness in this connection may be the fact that it represents the lowest rate of those ether-oscillations which produce color. Perhaps our increasing dislike to it indicates that power to distinguish it will eventually pass away—pass away in a sort of Daltonism at the inferior end of the color-scale. Such visual loss would probably be more than compensated by superior coincident specializations of retinal sensibility. A more highly organized generation might enjoy wonders of color now unimaginable, and yet never be able to perceive red,—not, at least, that red whose sensation is the spectral smouldering of the agonies and the furies of our evolutionary past,—the haunting of a horror innominable, immeasurable,—enormous phantom-menace of expired human pain.

Frisson

Frisson

SOME there may be who have never felt the thrill of a human touch; but surely these are few! Most of us in early childhood discover strange differences in physical contact; — we find that some caresses soothe, while others irritate; and we form in consequence various un-reasoning likes and antipathies. With the ripening of youth we seem to feel these distinctions more and more keenly, — until the fateful day in which we learn that a certain feminine touch communicates an unspeakable shiver of delight, — exercises a witchcraft that we try to account for by theories of the occult and the supernatural. Age may smile at these magical fancies of youth; and nevertheless, in spite of much science, the imagination of the lover is probably nearer to truth than is the wisdom of the disillusioned.

264 Exotics and Retrospectives

We seldom permit ourselves in mature life to think very seriously about such experiences. We do not deny them; but we incline to regard them as nervous idiosyncrasies. We scarcely notice that even in the daily act of shaking hands with persons of either sex, sensations may be received which no physiology can explain.

I remember the touch of many hands,—the quality of each clasp, the sense of physical sympathy or repulsion aroused. Thousands I have indeed forgotten,—probably because their contact told me nothing in particular; but the strong experiences I fully recollect. I found that their agreeable or disagreeable character was often quite independent of the moral relation: but in the most extraordinary case that I can recall—(a strangely fascinating personality with the strangest of careers as poet, soldier, and refugee)—the moral and the physical charm were equally powerful and equally rare. “Whenever I shake hands with that man,” said to me one of many who had yielded to his spell, “I feel a warm shock go all through me, like a glow of summer.” Even at this moment when I think of that dead hand, I can feel it reached out to me over the space of twenty years and of many

a thousand miles. Yet it was a hand that had killed. . . .

These, with other memories and reflections, came to me just after reading a criticism on Mr. Bain's evolutionsal interpretation of the thrill of pleasure sometimes given by the touch of the human skin. The critic asked why a satin cushion kept at a temperature of about 98° would not give the same thrill; and the question seemed to me unfair because, in the very passage criticised, Mr. Bain had sufficiently suggested the reason. Taking him to have meant — as he must have meant, — not that the thrill is given by any kind of warmth and softness, but only by the *peculiar* warmth and softness of the human skin, his interpretation can scarcely be contested by a sarcasm. A satin cushion at a temperature of about 98° could not give the same sensation as that given by the touch of the human skin for reasons even much more simple than Mr. Bain implied, — since it is totally different from the human skin in substance, in texture, and in the all-important fact that it is not alive, but dead. Of course warmth and softness in themselves are not enough to produce the thrill of pleasure con-

266 Exotics and Retrospectives

sidered by Mr. Bain : under easily imaginable circumstances they may produce something of the reverse. Smoothness has quite as much to do with the pleasure of touch as either softness or warmth can have ; yet a moist or a very dry smoothness may be disagreeable. Again, cool smoothness in the human skin is perhaps even more agreeable than warm smoothness ; yet there is a cool smoothness common to many lower forms of life which causes a shudder. Whatever be those qualities making pleasurable the touch of a hand, for example, they are probably very many in combination, and they are certainly peculiar to the *living* touch. No possible artificial combination of warmth and smoothness and softness combined could excite the same quality of pleasure that certain human touches give,—although, as other psychologists than Mr. Bain have observed, it may give rise to a fainter kind of agreeable feeling.

A special sensation can be explained only by special conditions. Some philosophers would explain the conditions producing this pleasurable thrill, or *frisson*, as mainly subjective ; others, as mainly objective. Is it not most likely that either view contains truth ;—that the physical cause

must be sought in some quality, definable or indefinable, attaching to a particular touch; and that the cause of the coincident emotional phenomena should be looked for in the experience, not of the individual, but of the race?

Remembering that there can be no two tangible things exactly alike, — no two blades of grass, or drops of water, or grains of sand, — it ought not to seem incredible that the touch of one person should have power to impart a sensation different from any sensation producible by the touch of any other person. That such difference could neither be estimated nor qualified would not necessarily imply unimportance or even feebleness. Among the voices of the thousands of millions of human beings in this world, there are no two precisely the same; — yet how much to the ear and to the heart of wife or mother, child or lover, may signify the unspeakably fine difference by which each of a billion voices varies from every other! Not even in thought, much less in words, can such distinction be specified; but who is unfamiliar with the fact and with its immense relative importance?

That any two human skins should be abso-

268 Exotics and Retrospectives

lutely alike is not possible. There are individual variations perceptible even to the naked eye, — for has not Mr. Galton taught us that the visible finger-marks of no two persons are the same? But in addition to differences visible — whether to the naked eye, or only under the microscope, there must be other differences of quality depending upon constitutional vigor, upon nervous and glandular activities, upon relative chemical composition of tissue. Whether touch be a sense delicate enough to discern such differences, would be, of course, a question for psycho-physics to decide, — and a question not simply of magnitudes, but of qualities of sensation. Perhaps it is not yet even legitimate to suppose that, just as by ear we can distinguish the qualitative differences of a million voices, so by touch we might be able to distinguish qualitative differences of surface scarcely less delicate. Yet it is worth while here to remark that the tingle or shiver of pleasure excited in us by certain qualities of voice, very much resembles the thrill given sometimes by the touch of a hand. Is it not possible that there may be recognized, in the particular quality of a living skin, something not less uniquely attractive than the indeter-

minable charm of what we call a bewitching voice ?

Perhaps it is not impossible. But in the character of the *frisson* itself there is a hint that the charm of the touch provoking it may be due to something much more deeply vital than any physical combination of smoothness, warmth and softness,—to something, as Mr. Bain has suggested, electric or magnetic. Human electricity is no fiction: every living body,—even a plant,—is to some degree electrical; and the electric conditions of no two organisms would be exactly the same. Can the thrill be partly accounted for by some individual peculiarity of these conditions? May there not be electrical differences of touch appreciable by delicate nervous systems,—differences subtle as those infinitesimal variations of timbre by which every voice of a million voices is known from every other ?

Such a theory might be offered in explanation of the fact that the slightest touch of a particular woman, for example, will cause a shock of pleasure to men whom the caresses of other and fairer women would leave indifferent. But it could not serve to explain why the same contact should

270 Exotics and Retrospectives

produce no effect upon some persons, while causing ecstasy in others. No purely physical theory can interpret all the mystery of the *frisson*. A deeper explanation is needed;—and I imagine that one is suggested by the phenomenon of “love at first sight.”

The power of a woman to inspire love at first sight does not depend upon some attraction visible to the common eye. It depends partly upon something objective which only certain eyes can see; and it depends partly upon something which no mortal can see,—*the psychological composition of the subject of the passion*. Nobody can pretend to explain in detail the whole enigma of first love. But a general explanation is suggested by evolutionary philosophy, — namely, that the attraction depends upon an inherited individual susceptibility to special qualities of feminine influence, and subjectively represents a kind of superindividual recognition, — a sudden waking of that inherited composite memory which is more commonly called “passional affinity.” Certainly if first love be evolutionally explicable, it means the perception by the lover of something differentiating the beloved from all other women, — something corresponding to an in-

herited ideal within himself, previously latent, but suddenly lighted and defined by result of that visual impression.

And like sight, though perhaps less deeply, do other of our senses reach into the buried past. A single strain of melody, the sweetness of a single voice — what thrill immeasurable will either make in the fathomless sleep of ancestral memory! Again, who does not know that speechless delight bestirred in us on rare bright days by something odorous in the atmosphere, — enchanting, but indefinable? The first breath of spring, the blowing of a mountain breeze, a south wind from the sea may bring this emotion, — an emotion overwhelming, yet nameless as its cause, — an ecstasy formless and transparent as the air. Whatever be the odor, diluted to very ghostliness, that arouses this delight, the delight itself is too weirdly voluminous to be explained by any memory-revival of merely individual experience. More probably it is older even than human life, — reaches deeper into the infinite blind depth of dead pleasure and pain.

Out of that ghostly abyss also must come the thrill responding within us to a living touch, — touch electrical of man, questioning the heart, —

272 Exotics and Retrospectives

touch magical of woman, invoking memory of caresses given by countless delicate and loving hands long crumbled into dust. Doubt it not! — the touch that makes a thrill within you is a touch that you have felt before, — sense-echo of forgotten intimacies in many unremembered lives!

Vespertina Cognitio

Vespertina Cognitio

I

I DOUBT if there be any other form of terror that even approaches the fear of the supernatural, — and more especially the fear of the supernatural in dreams. Children know this fear both by night and by day; but the adult is not likely to suffer from it except in slumber, or under the most abnormal conditions of mind produced by illness. Reason, in our healthy waking hours, keeps the play of ideas far above those deep-lying regions of inherited emotion where dwell the primitive forms of terror. But even as known to the adult in dreams only, there is no waking fear comparable to this fear, — none so deep and yet so vague, — none so unutterable. The indefiniteness of the horror renders verbal expression of it impossible; yet the suffering is so intense that, if prolonged beyond a certain term of seconds, it will kill. And the reason

276 Exotics and Retrospectives

is that such fear is not of the individual life: it is infinitely more massive than any personal experience could account for; — it is prenatal, ancestral fear. Dim it necessarily is, because compounded of countless blurred millions of inherited fears. But for the same reason, its depth is abysmal.

The training of the mind under civilization has been directed toward the conquest of fear in general, and — excepting that ethical quality of the feeling which belongs to religion — of the supernatural in particular. Potentially in most of us this fear exists; but its sources are well-guarded; and outside of sleep it can scarcely perturb any vigorous mind except in the presence of facts so foreign to all relative experience that the imagination is clutched before the reason can grapple with the surprise.

Once only, after the period of childhood, I knew this emotion in a strong form. It was remarkable as representing the vivid projection of a dream-fear into waking consciousness; and the experience was peculiarly tropical. In tropical countries, owing to atmospheric conditions, the oppression of dreams is a more serious suffering than with us, and is perhaps most common dur-

ing the siesta. All who can afford it pass their nights in the country; but for obvious reasons the majority of colonists must be content to take their siesta, and its consequences, in town.

The West-Indian siesta does not refresh like that dreamless midday nap which we enjoy in Northern summers. It is a stupefaction rather than a sleep, — beginning with a miserable feeling of weight at the base of the brain: it is a helpless surrender of the whole mental and physical being to the overpressure of light and heat. Often it is haunted by ugly visions, and often broken by violent leaps of the heart. Occasionally it is disturbed also by noises never noticed at other times. When the city lies all naked to the sun, stripped by noon of every shadow, and empty of wayfarers, the silence becomes amazing. In that silence the papery rustle of a palm-leaf, or the sudden sound of a lazy wavelet on the beach, — like the clack of a thirsty tongue, — comes immensely magnified to the ear. And this noon, with its monstrous silence, is for the black people the hour of ghosts. Everything alive is senseless with the intoxication of light; — even the woods drowse and droop in their wrapping of lianas, drunk with sun. . . .

278 Exotics and Retrospectives

Out of the siesta I used to be most often startled, not by sounds, but by something which I can describe only as a sudden shock of thought. This would follow upon a peculiar internal commotion caused, I believe, by some abnormal effect of heat upon the lungs. A slow suffocating sensation would struggle up into the twilight-region between half-consciousness and real sleep, and there bestir the ghastliest imaginings, — fancies and fears of living burial. These would be accompanied by a voice, or rather the idea of a voice, mocking and reproaching: — “ ‘ *Truly the light is sweet, and a pleasant thing it is for the eyes to behold the sun.* ’ . . . Outside it is day, — tropical day, — primeval day! And you sleep!! . . . ‘ *Though a man live many years and rejoice in them all, yet —* ’ . . . Sleep on! — all this splendor will be the same when your eyes are dust! . . . ‘ *Yet let him remember the days of darkness;* — FOR THEY SHALL BE MANY!’ ”

How often, with that phantom crescendo in my ears, have I leaped in terror from the hot couch, to peer through the slatted shutters at the enormous light without — silencing, mesmerizing; — then dashed cold water over my head, and stag-

gered back to the scorching mattress, again to drowse, again to be awakened by the same voice, or by the trickling of my own perspiration—a feeling not always to be distinguished from that caused by the running of a centipede! And how I used to long for the night, with its Cross of the South! Not because the night ever brought coolness to the city, but because it brought relief from the *weight* of that merciless sunfire. For the feeling of such light is the feeling of a deluge of something ponderable,—something that drowns and dazzles and burns and numbs all at the same time, and suggests the idea of liquified electricity.

There are times, however, when the tropical heat seems only to thicken after sunset. On the mountains the nights are, as a rule, delightful the whole year round. They are even more delightful on the coast facing the trade-winds; and you may sleep there in a seaward chamber, caressed by a warm, strong breeze,—a breeze that plays upon you not by gusts or whiffs, but with a steady ceaseless blowing,—the great fanning wind-current of the world's whirling. But in the towns of the other coast—nearly all situated at the base of wooded ranges cutting off the trade-

280 Exotics and Retrospectives

breeze, — the humid atmosphere occasionally becomes at night something nameless, — something worse than the air of an overheated conservatory. Sleep in such a medium is apt to be visited by nightmare of the most atrocious kind.

My personal experience was as follows: —

II

I was making a tour of the island with a half-breed guide ; and we had to stop for one night in a small leeward-coast settlement, where we found accommodation at a sort of lodging-house kept by an aged widow. There were seven persons only in the house that night, — the old lady, her two daughters, two colored female-servants, myself and my guide. We were given a single-windowed room upstairs, rather small, — otherwise a typical, Creole bedroom, with bare clean floor, some heavy furniture of antique pattern, and a few rocking-chairs. There was in one corner a bracket supporting a sort of household shrine — what the Creoles call a *chapelle*. The shrine contained a white image of the Virgin before which a tiny light was floating in a cup of oil.

By colonial custom your servant, while travelling with you, sleeps either in the same room, or before the threshold; and my man simply lay down on a mat beside the huge four-pillared couch assigned to me, and almost immediately began to snore. Before getting into bed, I satisfied myself that the door was securely fastened.

The night stifled; — the air seemed to be coagulating. The single large window, overlooking a garden, had been left open, — but there was no movement in that atmosphere. Bats — very large bats, — flew soundlessly in and out; — one actually fanning my face with its wings as it circled over the bed. Heavy scents of ripe fruit — nauseously sweet — rose from the garden, where palms and plantains stood still as if made of metal. From the woods above the town stormed the usual night-chorus of tree-frogs, insects, and nocturnal birds, — a tumult not to be accurately described by any simile, but suggesting, through numberless sharp tinkling tones, the fancy of a wide slow cataract of broken glass. I tossed and turned on the hot hard bed, vainly trying to find one spot a little cooler than the rest. Then I rose, drew a rocking-chair to the window and lighted a

282 Exotics and Retrospectives

cigar. The smoke hung motionless; after each puff, I had to blow it away. My man had ceased to snore. The bronze of his naked breast — shining with moisture under the faint light of the shrine-lamp, — showed no movement of respiration. He might have been a corpse. The heavy heat seemed always to become heavier. At last, utterly exhausted, I went back to bed, and slept.

It must have been well after midnight when I felt the first vague uneasiness, — *the suspicion*, — that precedes a nightmare. I was half-conscious, dream-conscious of the actual, — knew myself in that very room, — wanted to get up. Immediately the uneasiness grew into terror, because I found that I could not move. Something unutterable in the air was mastering will. I tried to cry out, and my utmost effort resulted only in a whisper too low for any one to hear. Simultaneously I became aware of a Step ascending the stair, — a muffled heaviness; and the real nightmare began, — the horror of the ghastly magnetism that held voice and limb, — the hopeless will-struggle against dumbness and impotence. The stealthy Step approached, — but with lentor malevolently measured, — slowly, slowly, as if

the stairs were miles deep. It gained the threshold, — waited. Gradually then, and without sound, the locked door opened; and the Thing entered, bending as it came, — a thing robed, — feminine, — reaching to the roof, — not to be looked at! A floor-plank creaked as It neared the bed; — and then — with a frantic effort — I woke, bathed in sweat; my heart beating as if it were going to burst. The shrine-light had died: in the blackness I could see nothing; but I thought I heard that Step retreating. I certainly heard the plank creak again. With the panic still upon me, I was actually unable to stir. The wisdom of striking a match occurred to me, but I dared not yet rise. Presently, as I held my breath to listen, a new wave of black fear passed through me; for I heard moanings, — long nightmare moanings, — moanings that seemed to be answering each other from two different rooms below. And then, close to me, my guide began to moan, — hoarsely, hideously. I cried to him: —

“Louis! — Louis!”

We both sat up at once. I heard him panting, and I knew that he was fumbling for his cutlass in the dark. Then, in a voice husky with fear, he asked: —

284 Exotics and Retrospectives

“*Missié, ess ou tanne ?*” [Monsieur, est-ce que vous entendez ?]

The moaners continued to moan, — always in crescendo: then there were sudden screams, — “*Madame !*” — “*Manzell !*” — and running of bare feet, and sounds of lamps being lighted, and, at last, a general clamor of frightened voices. I rose, and groped for the matches. The moans and the clamor ceased.

“*Missié,*” my man asked again, “*ess ou té oué y ?*” [Monsieur, est-ce que vous l’avez vue ?]

— “*Ça ou le di ?*” [Qu’est-ce que vous voulez dire ?] I responded in bewilderment, as my fingers closed on the match-box.

— “*Femm-là ?*” he answered. . . . THAT WOMAN ?

The question shocked me into absolute immobility. Then I wondered if I could have understood. But he went on in his patois, as if talking to himself : —

— “Tall, tall — high like this room, that Zombi. When She came the floor cracked. I heard — I saw.”

After a moment, I succeeded in lighting a candle, and I went to the door. It was still locked, — double-locked. No human being could have entered through the high window.

—“Louis!” I said, without believing what I said, — “you have been only dreaming.”

—“Missié,” he answered, “it was no dream. *She has been in all the rooms, touching people!*”

I said, —

—“That is foolishness! See!—the door is double-locked.”

Louis did not even look at the door, but responded:—

—“Door locked, door not locked, Zombi comes and goes. . . . I do not like this house. . . . Missié, leave that candle burning!”

He uttered the last phrase imperatively, without using the respectful *souplé*—just as a guide speaks at an instant of common danger; and his tone conveyed to me the contagion of his fear. Despite the candle, I knew for one moment the sensation of nightmare outside of sleep! The coincidences stunned reason; and the hideous primitive fancy fitted itself, like a certitude, to the explanation of cause and effect. The similarity of my vision and the vision of Louis, the creaking of the floor heard by us both, the visit of the nightmare to every room in succession, — these formed a more than unpleasant combination of evidence. I tried the planking with my foot in

286 Exotics and Retrospectives

the place where I thought I had seen the figure : it uttered the very same loud creak that I had heard before. "*Ça pa ka sam rêvé,*" said Louis. No! — that was not like dreaming. I left the candle burning, and went back to bed — not to sleep, but to think. Louis lay down again, with his hand on the hilt of his cutlass.

I thought for a long time. All was now silent below. The heat was at last lifting ; and occasional whiffs of cooler air from the garden announced the wakening of a land-breeze. Louis, in spite of his recent terror, soon began to snore again. Then I was startled by hearing a plank creak — quite loudly, — the same plank that I had tried with my foot. This time Louis did not seem to hear it. There was nothing there. It creaked twice more, — and I understood. The intense heat first, and the change of temperature later, had been successively warping and unwarping the wood so as to produce those sounds. In the state of dreaming, which is the state of imperfect sleep, noises may be audible enough to affect imagination strongly, — and may startle into motion a long procession of distorted fancies. At the same time it occurred to me that the al-

most concomitant experiences of nightmare in the different rooms could be quite sufficiently explained by the sickening atmospheric oppression of the hour.

There still remained the ugly similitude of the two dreams to be accounted for; and a natural solution of this riddle also, I was able to find after some little reflection. The coincidence had certainly been startling; but the similitude was only partial. That which my guide had seen in his nightmare was a familiar creation of West-Indian superstition — probably of African origin. But the shape that I had dreamed about used to vex my sleep in childhood, — a phantom created for me by the impression of a certain horrible Celtic story which ought not to have been told to any child blessed, or cursed, with an imagination.

III

Musing on this experience led me afterwards to think about the meaning of that fear which we call “the fear of darkness,” and yet is not really fear of darkness. Darkness, as a simple

288 Exotics and Retrospectives

condition, never could have originated the feeling,—a feeling that must have preceded any definite idea of ghosts by thousands of ages. The inherited, instinctive fear, as exhibited by children, is not a fear of darkness in itself, but of indefinable danger associated with darkness. Evolutionally explained, this dim but voluminous terror would have for its primal element the impressions created by real experience—experience of something acting in darkness;—and the fear of the supernatural would mingle in it only as a much later emotional development. The primeval cavern-gloom lighted by nocturnal eyes;—the blackness of forest-gaps by river-marges, where destruction lay in wait to seize the thirsty;—the umbrages of tangled shores concealing horror;—the dusk of the python's lair;—the place of hasty refuge echoing the fury of famished brute and desperate man;—the place of burial, and the fancied frightful kinship of the buried to the cave-haunters:—all these, and countless other impressions of the relation of darkness to death, must have made that ancestral fear of the dark which haunts the imagination of the child, and still betimes seizes the adult as he sleeps in the security of civilization.

Not all the fear of dreams can be the fear of the immemorial. But that strange nightmare-sensation of being held by invisible power exerted from a distance — is it quite sufficiently explained by the simple suspension of will-power during sleep? Or could it be a composite inheritance of numberless memories of *having been caught*? Perhaps the true explanation would suggest no prenatal experience of monstrous mesmerisms nor of monstrous webs, — nothing more startling than the evolutionary certainty that man, in the course of his development, has left behind him conditions of terror incomparably worse than any now existing. Yet enough of the psychological riddle of nightmare remains to tempt the question whether human organic memory holds no record of extinct forms of pain, — pain related to strange powers once exerted by some ghastly vanished life.

The Eternal Hunter

The Eternal Haunter

THIS year the Tōkyō color-prints — *Nishiki-é* — seem to me of unusual interest. They reproduce, or almost reproduce, the color-charm of the early broadsides ; and they show a marked improvement in line-drawing. Certainly one could not wish for anything prettier than the best prints of the present season.

My latest purchase has been a set of weird studies, — spectres of all kinds known to the Far East, including many varieties not yet discovered in the West. Some are extremely unpleasant ; but a few are really charming. Here, for example, is a delicious thing by “Chikanobu,” just published, and for sale at the remarkable price of three *sen* !

Can you guess what it represents ? . . . Yes, a girl, — but what kind of a girl ? Study it a little. . . . Very lovely, is she not, with that shy sweetness in her downcast gaze, — that light and dainty grace, as of a resting butterfly ? . . . No,

294 Exotics and Retrospectives

she is not some Psyche of the most Eastern East, in the sense that you mean — but she is a soul. Observe that the cherry-flowers falling from the branch above, are passing *through* her form. See also the folds of her robe, below, melting into blue faint mist. How delicate and vapory the whole thing is! It gives you the feeling of spring; and all those fairy colors are the colors of a Japanese spring-morning. . . . No, she is not the personification of any season. Rather she is a dream — such a dream as might haunt the slumbers of Far-Eastern youth; but the artist did not intend her to represent a dream . . . You cannot guess? Well, she is a tree-spirit, — the Spirit of the Cherry-tree. Only in the twilight of morning or of evening she appears, gliding about her tree; — and whoever sees her must love her. But, if approached, she vanishes back into the trunk, like a vapor absorbed. There is a legend of one tree-spirit who loved a man, and even gave him a son; but such conduct was quite at variance with the shy habits of her race. . . .

You ask what is the use of drawing the Impossible? Your asking proves that you do not feel the charm of this vision of youth, — this dream of spring. *I* hold that the Impossible bears a

much closer relation to fact than does most of what we call the real and the commonplace. The Impossible may not be naked truth ; but I think that it is usually truth, — masked and veiled, perhaps, but eternal. Now to me this Japanese dream is true, — true, at least, as human love is. Considered even as a ghost it is true. Whoever pretends not to believe in ghosts of any sort, lies to his own heart. Every man is haunted by ghosts. And this color-print reminds me of a ghost whom we all know, — though most of us (poets excepted) are unwilling to confess the acquaintance.

Perhaps — for it happens to some of us — you may have seen this haunter, in dreams of the night, even during childhood. Then, of course, you could not know the beautiful shape bending above your rest : possibly you thought her to be an angel, or the soul of a dead sister. But in waking life we first become aware of her presence about the time when boyhood begins to ripen into youth.

This first of her apparitions is a shock of ecstasy, a breathless delight ; but the wonder and the pleasure are quickly followed by a sense of

296 Exotics and Retrospectives

sadness inexpressible, — totally unlike any sadness ever felt before, — though in her gaze there is only caress, and on her lips the most exquisite of smiles. And you cannot imagine the reason of that feeling until you have learned who she is, — which is not an easy thing to learn.

Only a moment she remains; but during that luminous moment all the tides of your being set and surge to her with a longing for which there is not any word. And then — suddenly! — she is not; and you find that the sun has gloomed, the colors of the world turned grey.

Thereafter enchantment remains between you and all that you loved before, — persons or things or places. None of them will ever seem again so near and dear as in other days.

Often she will return. Once that you have seen her she will never cease to visit you. And this haunting, — ineffably sweet, inexplicably sad, — may fill you with rash desire to wander over the world in search of somebody like her. But however long and far you wander, never will you find that somebody.

Later you may learn to fear her visits because of the pain they bring, — the strange pain that you cannot understand. But the breadth of zones

and seas cannot divide you from her; walls of iron cannot exclude her. Soundless and subtle as a shudder of ether is the motion of her.

Ancient her beauty as the heart of man, — yet ever waxing fairer, forever remaining young. Mortals wither in Time as leaves in the frost of autumn; but Time only brightens the glow and the bloom of her endless youth.

All men have loved her; — all must continue to love her. But none shall touch with his lips even the hem of her garment.

All men adore her; yet all she deceives, and many are the ways of her deception. Most often she lures her lover into the presence of some earthly maid, and blends herself incomprehensibly with the body of that maid, and works such sudden glamour that the human gaze becomes divine, — that the human limbs shine through their raiment. But presently the luminous haunter detaches herself from the mortal, and leaves her dupe to wonder at the mockery of sense.

No man can describe her, though nearly all men have some time tried to do so. Pictured she cannot be, — since her beauty itself is a ceaseless becoming, multiple to infinitude, and tremulous with perpetual quickening, as with flowing of light.

298 Exotics and Retrospectives

There is a story, indeed, that thousands of years ago some marvellous sculptor was able to fix in stone a single remembrance of her. But this doing became for many the cause of sorrow supreme; and the Gods decreed, out of compassion, that to no other mortal should ever be given power to work the like wonder. In these years we can worship only; — we cannot portray.

But who is she? — what is she? . . . Ah! that is what I wanted you to ask. Well, she has never had a name; but I shall call her a tree-spirit.

The Japanese say that you can exorcise a tree-spirit, — if you are cruel enough to do it, — simply by cutting down her tree.

But you cannot exorcise the Spirit of whom I speak, — nor ever cut down her tree.

For her tree is the measureless, timeless, billion-branching Tree of Life, — even the World-Tree, Yggdrasil, whose roots are in Night and Death, whose head is above the Gods.

Seek to woo her — she is Echo. Seek to clasp her — she is Shadow. But her smile will haunt you into the hour of dissolution and beyond, — through numberless lives to come.

And never will you return her smile, — never,

because of that which it awakens within you, — the pain that you cannot understand.

And never, never shall you win to her, — because she is the phantom light of long-expired suns, — because she was shaped by the beating of infinite millions of hearts that are dust, — because her witchery was made in the endless ebb and flow of the visions and hopes of youth, through countless forgotten cycles of your own incalculable past.
